

# Distribution System Planning Public Workshop #6 October 25, 2021

# Workshop #6 Information

## Teams Meeting Information

- Microsoft Teams meeting
  - Join on your computer or mobile app**  
[Click here to join the meeting](#)
  - Or call in (audio only)**  
[+1 563-275-5003,, 221192440#](#) United States, Davenport  
Phone Conference ID: 221 192 440#
- **Please place your phone on “Mute” when not speaking**
- **Please do not use the “Hold” function on your phone**
- Meeting attendance and public chat will be available at the website.
- Please use the chat function in TEAMS to provide any questions or comments during this presentation. We will do our best to address those as they come up, if we are unable to get to them, we will follow-up directly or at an upcoming workshop.

# Today's Goals

- Introductions
- Overview of DSP Part 1
- Display of Map viewer at [Pacific Power DSP Map Viewer](#)
  - Intro to using the application
- Discussion of data:
  - Energy burden and other demographic data
  - Energy incentives
  - DG readiness and capacity
  - Network performance (reliability)
  - Intended “transitional” planning areas
- Feedback
- Upcoming
  - Next meetings

## Progress To Date

- ✓ Five workshops held
- ✓ GIS Viewer available for public to use
- ✓ DSP Part 1 Filed
- ✓ Survey Contract being advanced through procurement

# PacifiCorp's Oregon DSP Plan Part 1

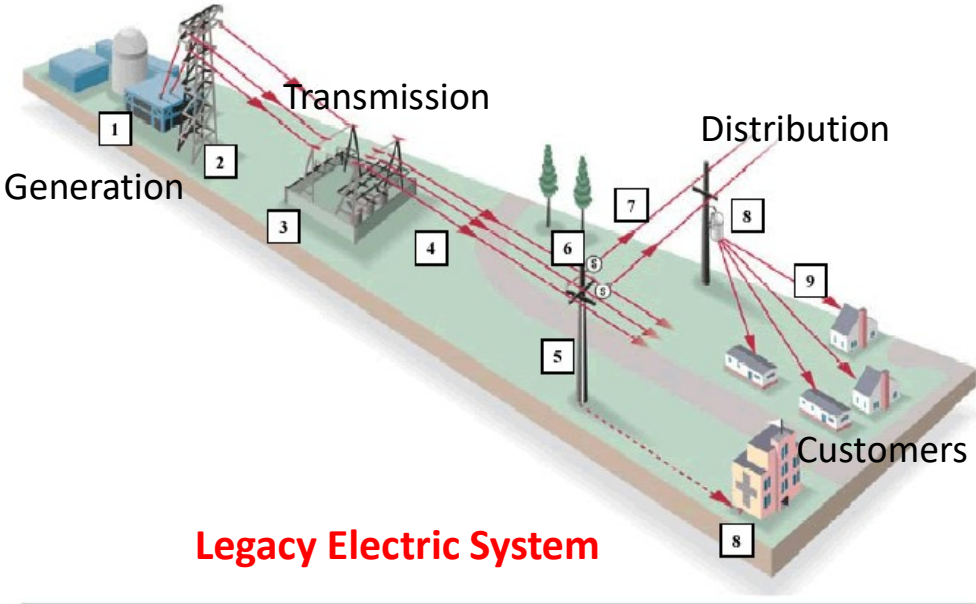

2021

Oregon Distribution System Plan

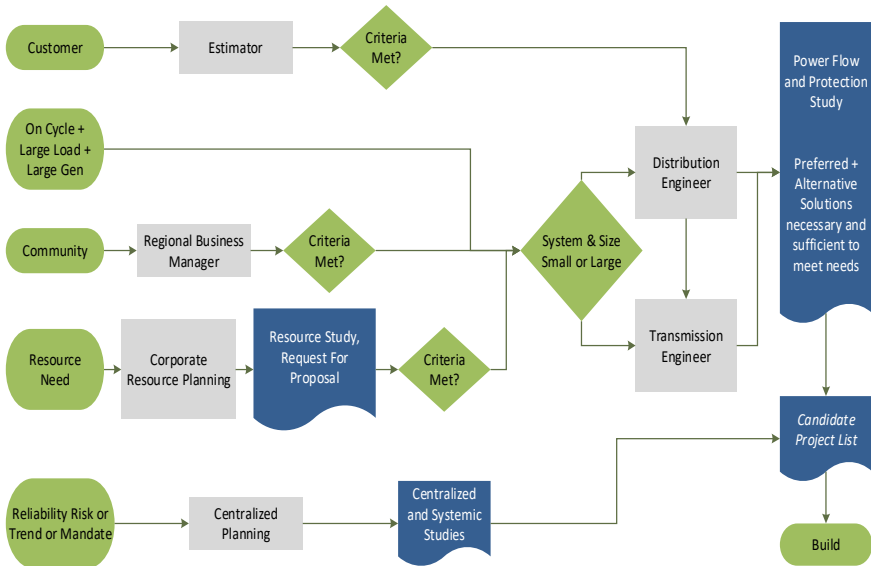

- ✓ Filed October 15, 2021
- ✓ Outlines
  - ✓ where we are
  - ✓ where we see ourselves
  - ✓ how we create better conversation
  - ✓ how we establish path forward and
  - ✓ how we get to either of those alternates
- ✓ Noteworthy parts of the document

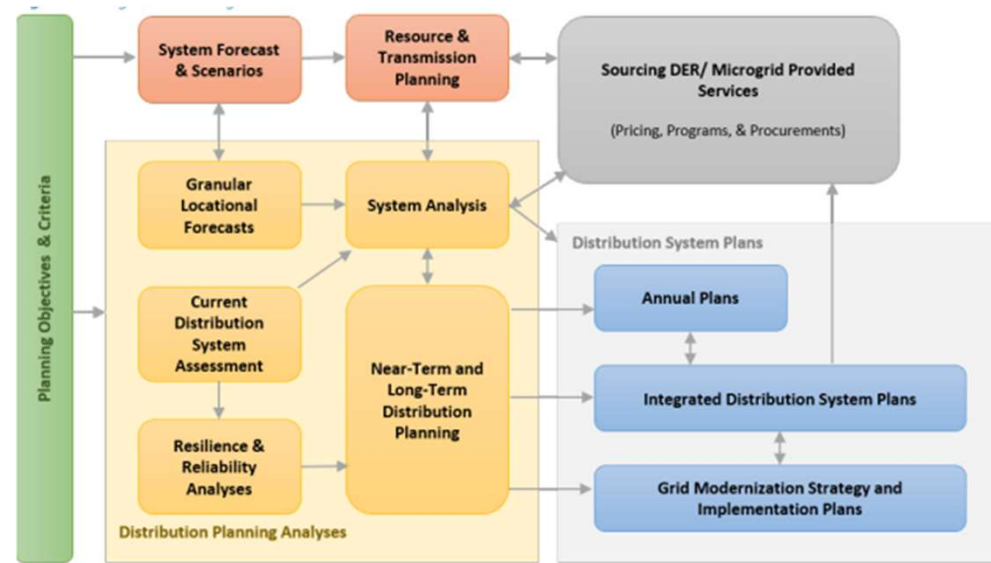

# Reminder Visual: Electric Utility...current & future

| Tasks  | Start   | Finish   |
|--|---------|----------|
| File DSP Part 1  |         | 10/15/21 |
| Stakeholder Outreach   | 4/2021  | 8/2022   |
| Engage customers and stakeholders for feedback to DSP                        | 4/2021  | 8/2022   |
| Initiate DSP community engagement survey                                     | 1/2022  | 2/2022   |
| Evaluate feedback from survey and revise communication plan as needed        | 3/2022  | 3/2022   |
| Develop content to train internal audiences on DSP                           | 10/2021 | 1/2022   |
| Evaluate options for multi-language production of content                    | 12/2021 | 1/2022   |
| Establish method for multi-language and language-impaired DSP communications | 1/2022  | 3/2022   |
| Modify long term relevant to progress and feedback received                  | 4/2021  | 8/2022   |
| Evaluate Energy Equity Metrics for Stakeholders, Engineers and Regulators    | 11/2021 | 9/2022   |
| Value & Calibrate Energy Equity Metrics                                      | 11/2021 | 3/2022   |
| Review energy equity metric displays   | 3/2022  | 5/2022   |
| Develop a dashboard of energy equity metrics                                 | 5/2022  | 8/2022   |
| Capacity Planning Transition Process   | 10/2021 | 8/2022   |
| Refine planning transition schedule  | 10/2021 | 3/2022   |
| Review planning schedule with stakeholders                                   | 1/2022  | 3/2022   |
| Modify planning schedule as necessary  | 1/2022  | 8/2022   |
| Resource Planning Transition Process   | 1/2022  | 8/2022   |
| Receive DSM and DG forecasts for 2023 IRP                                    | 1/2022  | 3/2022   |
| Integrate DSM and DG forecasts into legacy planning areas                    | 3/2022  | 3/2022   |
| Integrate DSM and DG forecasts into transitional planning areas              | 3/2022  | 8/2022   |
| Aggregate forecasts into load forecast load bubbles                          | 3/2022  | 6/1/22   |
| Refine implementation plan for transitional planning process                 | 6/2022  | 8/2022   |
| Pilot Projects   | 11/2021 | 8/2022   |
| Evaluate existing area plans for GNAs for pilot                              | 11/2021 | 3/2022   |
| Evaluate transitional area plans for GNAs for pilot                          | 1/2022  | 3/2022   |
| Identify range of pilot options (Non-wires Alternatives)                     | 4/2021  | 7/2022   |
| Identify pilot locations & project types                                     | 4/2022  | 7/2022   |
| Determine Pilot selection metrics  | 4/2022  | 7/2022   |
| Conduct Public Participation to assess Pilot alternatives                    | 4/2022  | 7/2022   |
| Pilot selections   | 3/2022  | 8/2022   |
| File DSP Part 2 Plan   |         | 8/15/22  |

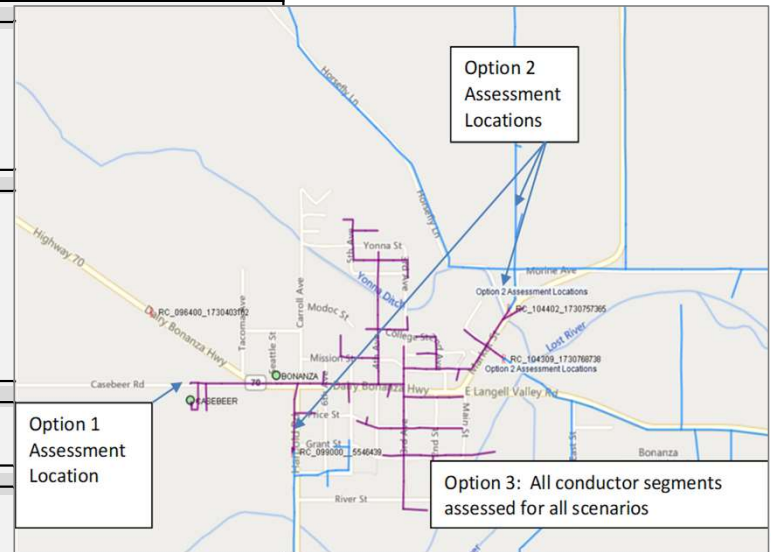

# Short Term Plan & Areas of Lack of Digital Information for Circuits

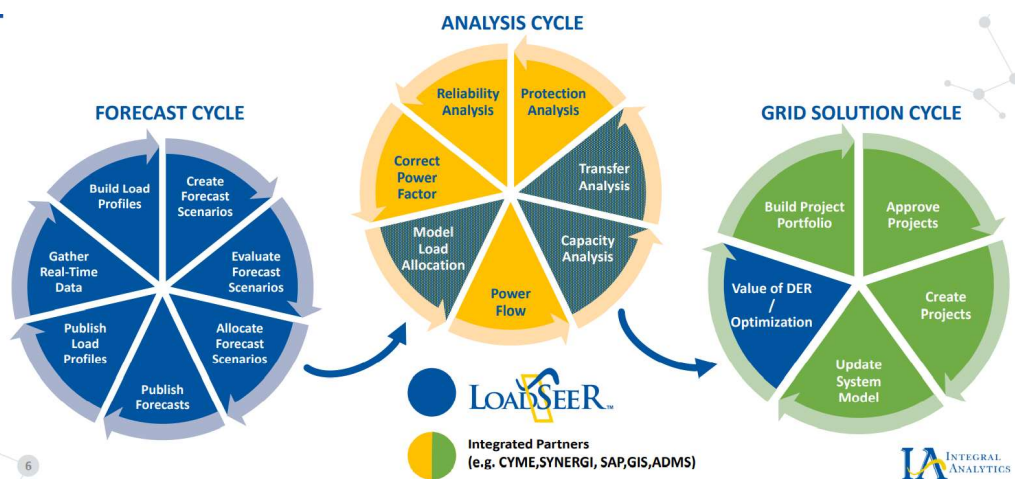

# HCA Options

| HCA Assessment  |   |  |   |
|---|---|--|---|
| Option  | Option 1  | Option 2   | Option 3  |
| <b>Methodology</b>  | Stochastic/EPRI Drive   | Stochastic/EPRI Drive  | Iterative   |
| <b>Geographic Granularity</b>   | Circuit (substation breaker)  | Feeder (momentary ZOP)   | Line Segment  |
| <b>Data Presentation</b>  | Annual Minimum Daily Load   | Monthly Minimum Daily Load   | Hourly Assessment   |
| <b>Refresh</b>  | Annual  | Monthly  | Monthly   |
| <b>Planned/Queued Generation</b>  | Details such as number, size, description, cost of upgrades, etc.   | Details such as number, size, description, cost of upgrades, etc.  | Details such as number, size, description, cost of upgrades, etc.   |
| <b>Data Security</b>  | Not a concern unless circuit only serves one customer               | Becomes a concern when single larger customers are discernible against available or placed capacity  | Concern is exacerbated due to ability to "learn" about placed or in progress producing projects based on temporal analysis  |
| <b>Result Validation</b>  | Subject matter review   | Requires greater equipment and automation processes for credible reviews at feeder equipment levels  | Requires greater equipment and automation processes for credible reviews at line segment levels, which requires key data points be calculated for verification and can only be performed on circuits having profile data available against time series models |
| <b>Implementation Concerns</b>  | None; we did it   | To maintain project confidentiality many feeder segments will require redaction and result in limited value to broad use by community stakeholders   | High intensity computing requirements for limited duration applicability; work produced has a very short range or use for a high cost   |
| <b>Barriers</b>   | Requires development of core data to support refresh of information | Requires development of business rules to ensure proper confidentiality is retained; many line devices will have estimated results due to lack of line sensor data at momentary sectionalization level | Substantial technology, data and business rule establishment is required to support level of models being produced for external consumption and business decision processes without clear integration into the DSP transparent process                        |
| <b>System Availability</b>  | \$ 361,920  | \$ 9,437,760   | \$ 62,714,400   |
| Establish Load Cases  |   |  |   |
| Establish Maximum Values for Equipment  |   |  |   |
| Identify Credible Values for Each Attribute   |   |  |   |
| Establish Use Cases   |   |  |   |
| Produce Use Case Values at Each Equipment Location                                    |   |  |   |
| Place Value in Repository and Geospatially  |   |  |   |
| <b>Existing Inventory</b>   | \$ 90,480   | \$ 100,000   | \$ 100,000  |
| Summarize Placed Capacity   |   |  |   |
| Summarize In Progress Capacity  |   |  |   |
| Build integration between In Progress Projects and Issues/Alternatives System         |   |  |   |
| Reduce In Progress Capacity for Any Stale/Mothballed Projects                         |   |  |   |
| Total Capacity for "Worst Case" Conditions  |   |  |   |
| Place Project & Capacity in Repository and Geospatially                               |   |  |   |
| <b>GIS</b>  | \$35,000  | \$ 45,000  | \$ 45,000   |
| Produce Map Views and Data for Current Capacity and Availability and Status Reporting |   |  |   |
| <b>Software Licensing &amp; Implementation</b>  |   |  |   |
| CYME/EPRI Drive   |   | \$ 34,500  |   |
| CYME ICA  |   |  | \$ 34,500   |
| Computing Resources   |   | \$ 150,000   | \$ 325,000  |
| Interface Creation  |   | \$ 325,000   | \$ 775,000  |
| Report Development  | \$ 10,000   | \$ 10,000  | \$ 20,000   |
| <b>Total</b>  | <b>\$ 497,400</b>   | <b>\$ 10,102,260</b>   | <b>\$ 64,013,900</b>  |

POWERING YOUR GREATNESS

# Other enablers to DSP in Oregon

# Plan Options and Long-Range Plan

| Long Term Plan  | One Time Cost | Annual Cost  |
|---|---------------|--------------|
| Total Option 1 HCA  | \$20,118,263  | \$7,615,440  |
| Total Option 2 HCA  | \$29,723,123  | \$17,220,300 |
| Total Option 3 HCA  | \$83,634,763  | \$12,546,840 |
| SCADA build out (over five years of deployment) - 2026                                      | \$2,754,000   | \$350,000    |
| Extensible base communication system to substations - 2026                                  |               | \$275,000    |
| Leases  | \$250,000     |              |
| Fiber   | \$8,700,000   |              |
| Multiple Address System (MAS)   | \$775,000     |              |
| LoadSEER software license - 2022  | \$3,276,000   |              |
| Implement LoadSEER (if implemented system wide could result in cost reduction) - 2024       | \$775,000     |              |
| Implement & expand use of CYME DERie (based on HCA Option chosen) - 2027                    |               |              |
| Expand pilots for DA/FLISR - 2031   |               | \$1,500,000  |
| CYME plug ins (to be further assessed through Plan 2)                                       |               |              |
| AMI integration with Dynamic Data Pull  |               |              |
| EPRI Adapt (Advanced Distribution Assessment Planning Tools)                                |               |              |
| Integration Capacity Analysis/DERie/EPRI Drive  |               |              |
| LoadSEER Implementation - 2024  | \$1,000,000   |              |
| Plug in implementation - 2026   | \$750,000     |              |
| Evaluate and Implement Greenlink Analytics (GEM) or Equivalent - 2022                       | \$10,863      |              |
| Create alternatives assessment repository in AMPS database - 2023                           | \$50,000      |              |
| Integrate PowerClerk with LoadSEER and CYME - 2024  | \$450,000     |              |
| Integration with other enterprise technology projects - 2027                                |               |              |
| Communications Plan Implementation  | \$600,000     | \$650,000    |
| Standup DSP communications collateral creation  | \$150,000     |              |
| Community Surveys (at least annual cadence, potentially twice)                              | \$80,000      |              |
| DSP Education Materials   |               |              |
| DSP Education Events  |               |              |
| Core DSP Activities   |               | \$4,343,040  |
| Conduct local planning meetings   |               |              |
| Share alternatives advocated by communities and stakeholders                                |               |              |
| Perform legacy studies during transition period   |               |              |
| Perform integrative planning functions  |               |              |
| Communicate options and costs   |               |              |
| Maintain data repositories that are critical for DSP  |               |              |
| Advance technology in support of DSP stakeholders and participants                          |               |              |
| Produce content for regular meetings, specific local area topics and regulatory obligations |               |              |
|   | \$19,620,863  | \$7,118,040  |

| Hosting Capacity Options |              |              |
|--------------------------|--------------|--------------|
| Option 1                 | \$497,400    | \$497,400    |
| Option 2                 | \$10,102,260 | \$10,102,260 |
| Option 3                 | \$64,013,900 | \$5,428,800  |

# Map Viewer

### Planning principles

- Transparent and comprehensive data sets for customers, communities and stakeholders to evaluate and set priorities as we move to a clean, equitable energy future
- Robust community engagement
- Technology adoption
- Grid resilience

### Distribution System Planning Report

Pacific Power submitted its **Oregon Distribution System Plan Report – Part 1** with the OPUC on October 15, 2021.

[DOWNLOAD THE REPORT](#)

### Map viewer

This is a high level map showing certain information within our system including distributed generation, energy equity and incentive information, and reliability. This map will evolve over time.

[SEE THE MAP](#)

# Data Discussion

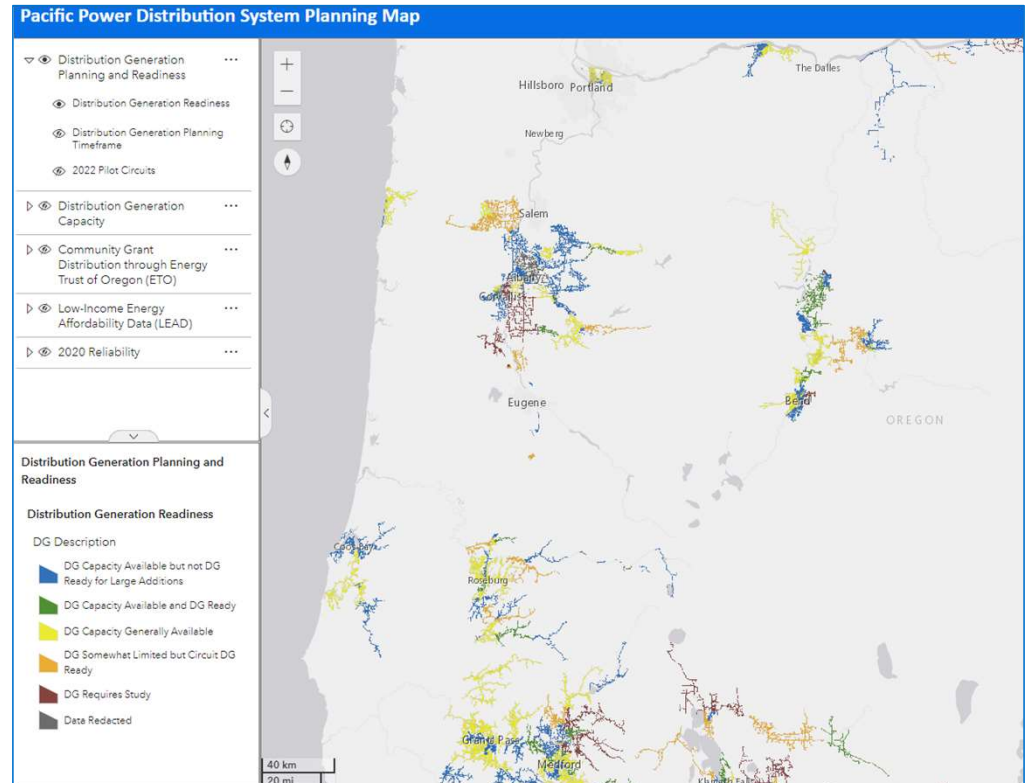

# DG Planning and Readiness

DG Planning involves factors that include DG capacity and readiness

- A circuit is considered more DG ready if it has DG capacity, real-time load data is available, and appropriate protection is installed for DG
- Colors listed in the map provide guidance to the user if DG can be added or if work may be required to connect DG

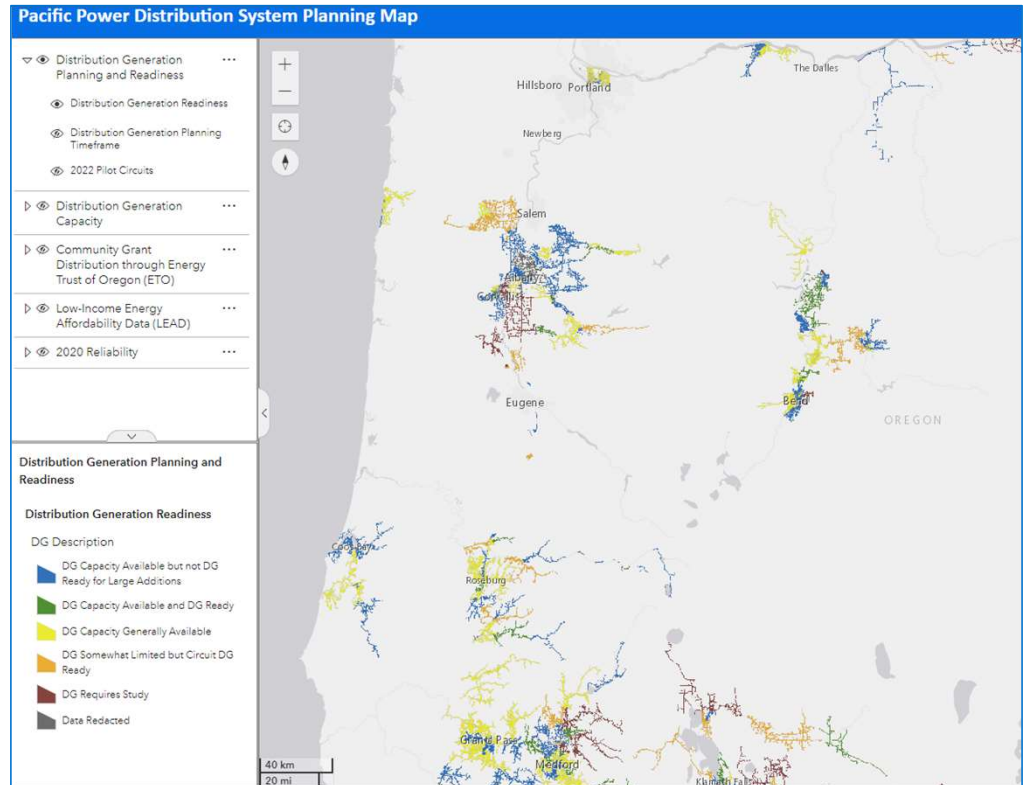

# DG Planning and Readiness

DG readiness is determined at the circuit breaker level and is influenced by factors based on:

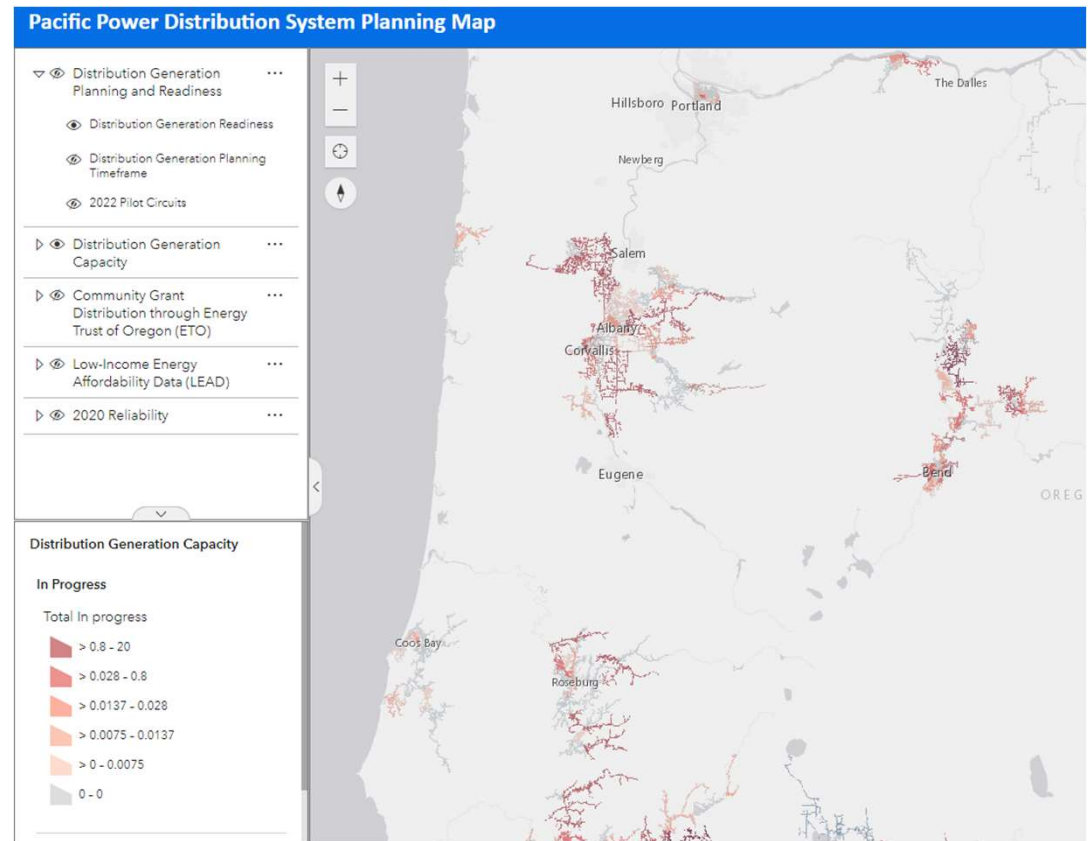

- Load data (SCADA is installed)
- Daytime minimum load capacity (positive load)
- Protection and Control (dead line check is installed)

As an example, a circuit with SCADA, has daytime minimum load capacity, and dead line check installed will have a higher rating than a circuit without any one of these items.

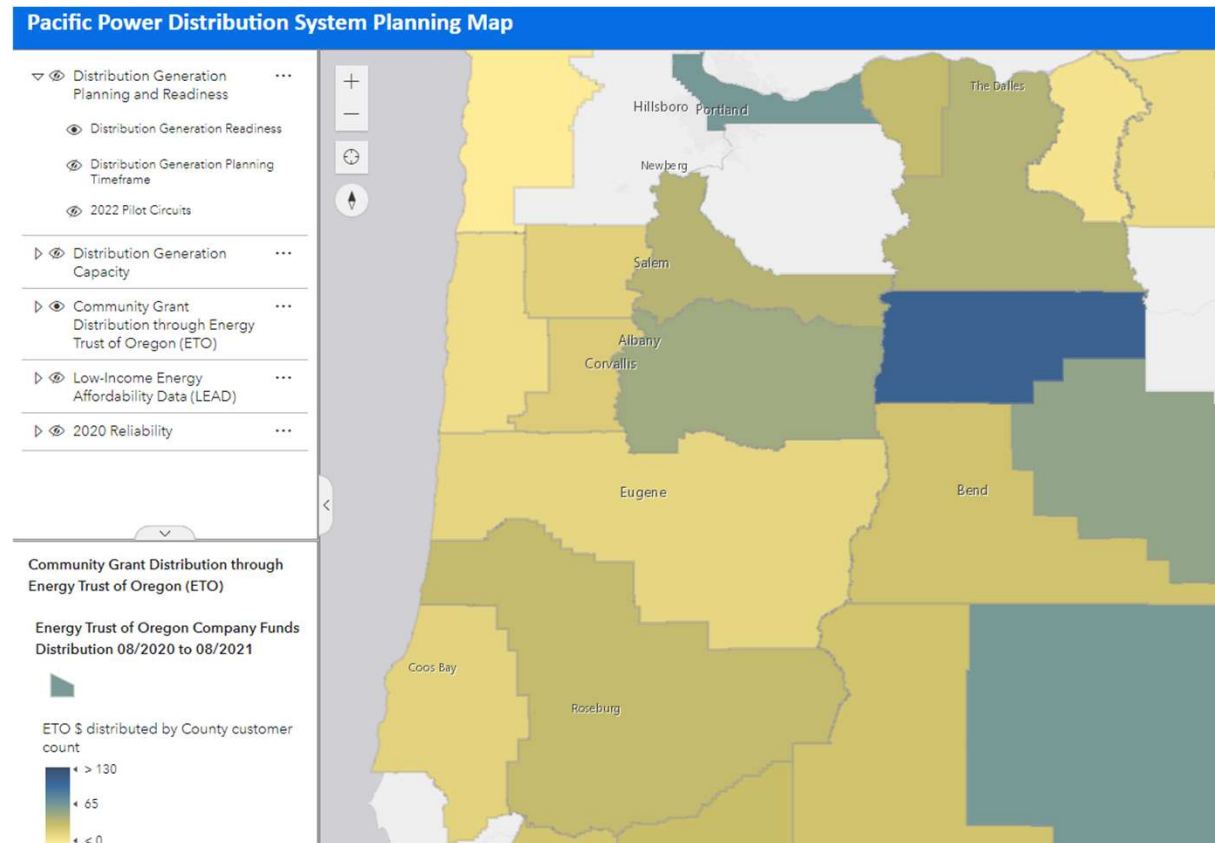

# DG Capacity

- Interconnected Capacity (MW)
- In Progress Capacity (MW)
- Technology
- Net Metering vs Generator

# Community Grants/Incentives

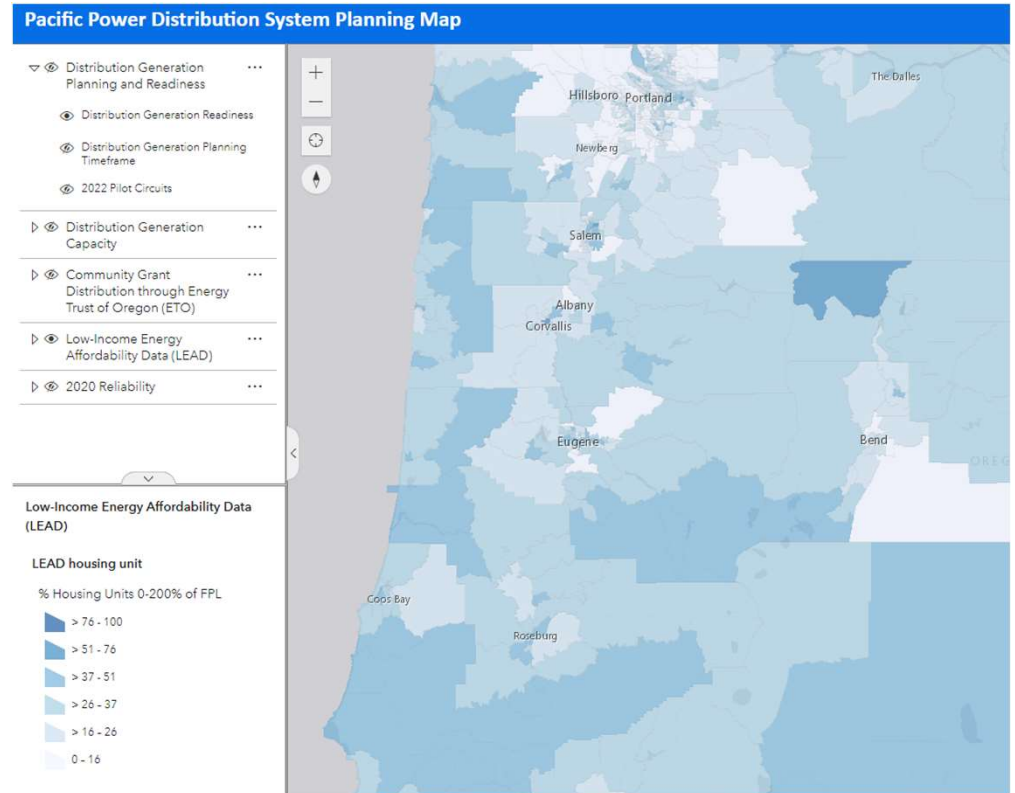

- Represented by Energy Trust incentives from 8/2020 to 8/2021 on a per customer basis.
- Large projects can have outsized impact on distribution results.
- Incentives are distributed relatively well between rural and urban counties with Morrow, Jefferson and Multnomah counties being the highest and Sherman and coastal counties being the lowest.

# DOE LEAD Data

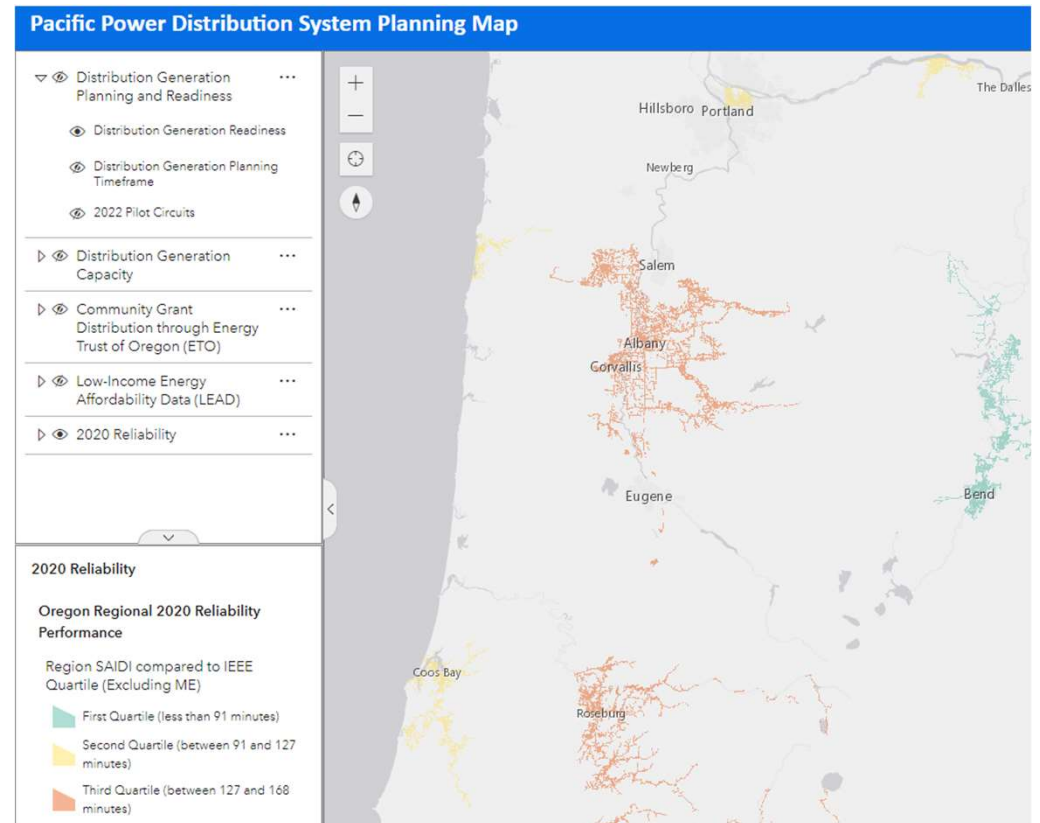

- Low-Income Energy Affordability Data (LEAD)

- Energy Affordability
- Housing Units

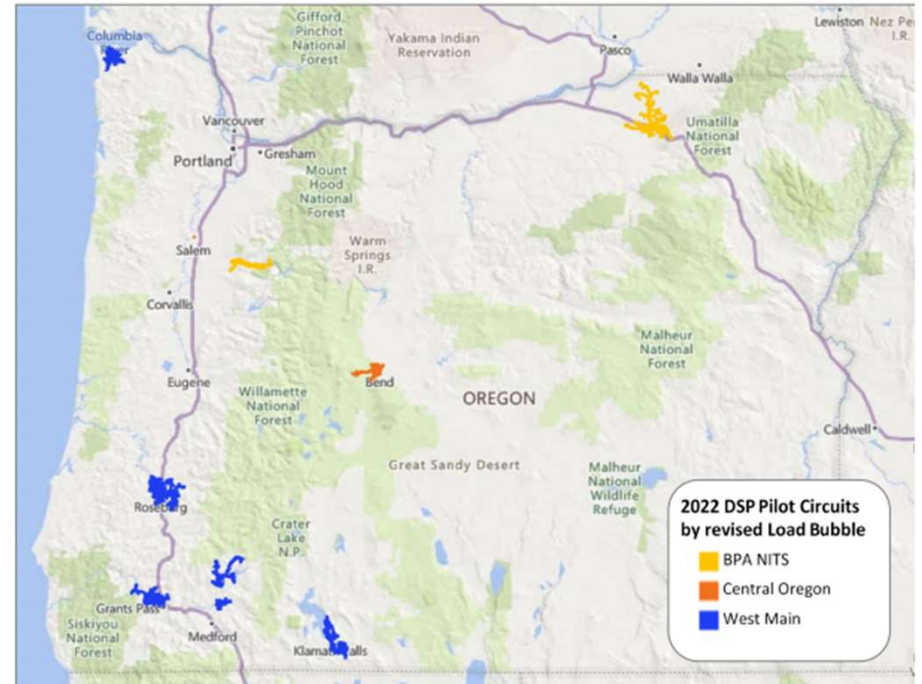

# Reliability

- 2020 Oregon Reliability
  - SAIDI at a Regional Level
  - SAIDI at a Circuit Level
  - Compared against industry quartiles

# Initial Transitional Planning Areas

| 2022 Distribution System Planning Pilot Circuits |   |               |  |                    |  |                                  |   |                     |
|--|---|---------------|--|--------------------|--|----------------------------------|---|---------------------|
| Revised Load Bubble                              | BPA NITS  |               | Central Oregon   | West Main          |  |                                  |   |                     |
| Revised Sub Load Bubble                          | Pendleton   | Santiam       | Bend   | Clatsop<br>Astoria | Southern Oregon/California                             |                                  |   |                     |

- In current plan for 2022 review
- Existence of circuit level SCADA
- Available capacity for Distributed Generation
- For additional areas or pilot technologies please provide your thoughts
- *We'll be adding a new pilot interest form within the next week*

# Feedback

## Schedule and Next Steps

- **Anticipated procedural dates**
  - Thursday, Dec 2, 2021 – Staff workshop to receive public comment
  - Thursday, Feb 24, 2022 – Special Public Meeting: IOUs present to the Commission, Commission considers acceptance of Part 1 filings
  - Monday, Aug 15, 2022 – DSP Part 2 filing date
- **Future Workshops**
  - Thoughts for content in future workshops?
