

Appendix 1

Estimated Peak Contributions
2012

Rocky Mountain Power

Energy Efficiency Programs

The MW reported savings of 3.38 (at generation) for energy efficiency programs during 2012 represents the summation of estimated MW values made available through the Company's business and residential energy efficiency programs; calculations for the business and residential programs differ.

The Company's business programs MW contributions are based on engineering estimates of capacity values for installed measures; project unique factors are individually calculated for custom projects while deemed factors are utilized for prescriptive measures. These calculations are based on actual installed measures in the reported year. For 2012, it is calculated that 2.08 MW of capacity contribution were made available through business program energy efficiency acquisitions. Specific hours during which business program measures contribute MW capacity are dependent upon several factors including specific business operations and general economic conditions.

For the residential programs, energy to capacity factor is utilized to calculate the MW savings made available through these programs. The energy to capacity factor utilized in the calculation (1.42 MW in 2012 for each average MWh of energy efficiency acquired) is the same as the average load profile factor of energy efficiency resources selected in the 2011 IRP, i.e. the average peak contribution of the energy efficiency resource selections across all measures and sectors. The utilization of this factor in the MW calculation assumes that the energy efficiency resources acquired through the Company's residential programs have the same average load profile as those energy efficiency resources selected in the 2011 IRP. Utilization of this factor in determining the MW contribution of energy efficiency programs for 2012 is detailed in the table below.

Line	Description	Value
1	First year EE program savings acquired during 2012	8,026
2	Average MWh value (line 1 / 8760 hours)	0.92
3	Peak MW contribution of 2012 EE acquisitions	1.30

As demonstrated, it is estimated that the residential energy efficiency program acquisitions in 2012 contributed 1.30 MW of capacity contribution. As with the business programs, when these savings occur on an hourly basis is dependent upon several factors including energy usage patterns of residential customers.

Together, the 2.08 MW's estimated for the business programs and the 1.3 MW's estimated for residential programs make up the 3.38 MW savings value of energy efficiency programs.

Portfolio and Sector Level Cost Effectiveness

The overall energy efficiency portfolio and component sectors were cost effective on a PacifiCorp Total Resource Cost Test (PTRC), Total Resource Cost Test (TRC), Utility Cost Test (UCT), and Participant Cost Test (PCT) basis.

The following table provides the results of all five cost effectiveness tests.

Portfolio and Sector Cost Effectiveness Summary	PTRC	TRC	UCT	RIM	PCT
Energy Efficiency Portfolio Including Portfolio and Self Direction Costs	2.16	1.96	3.46	0.96	2.43
C&I Energy Efficiency Portfolio	2.40	2.19	4.26	1.06	2.29
Residential Energy Efficiency Portfolio	1.73	1.57	2.34	0.70	2.96

Sector and Program Level Cost Effectiveness Summaries:

The cost effectiveness results for the sector level are aggregations of the costs and benefits from the component programs. The inputs and assumptions that support these results are contained in the program level cost effectiveness results.

The tables below present the cost-effectiveness analysis for the Wyoming Energy Efficiency Portfolio based on 2012 costs and savings estimates. The utility discount rate is from the 2011 PacifiCorp Integrated Resource Plan.

The portfolio is cost-effective from all perspectives, except for the RIM.

Table 1: Common Inputs

Program Level Cost Effectiveness

Home Energy Savings Program

The tables below present the cost-effectiveness findings of the Wyoming Home Energy Savings program based on 2012 costs and savings estimates. The utility discount rate is from the 2011 PacifiCorp Integrated Resource Plan.

Cost-effectiveness was tested using the 2011 IRP 35% load factor east residential whole house decrement. Table 1 lists modeling inputs.

The program is cost-effective from the PTRC, TRC, UCT and PCT perspectives.

Table 1: Home Energy Savings Inputs

Appendix 3

Wyoming Measure Installation Verifications

Rocky Mountain Power

Wyoming Measure Installation Verifications

Low Income Weatherization

All projects

- All measures are qualified through US Department of Energy approved audit tool or priority list.
- 100 percent inspection by agency inspector of all homes treated, reconciling work completed and quality (corrective action includes measure verification) prior to invoicing Company.
- State inspectors randomly inspect 5-10 percent of completed homes.

Home Energy Savings

Site inspections by Program Administrator staff for the following retrofit measures (≥ 5 percent)

- Insulation
- Windows
- Central air conditioner / heat pump tune-ups
- Duct sealing and insulation
- Heat pump / Central air conditioner best practice installation and sizing

Site inspections of 100 percent by Program Administrator staff of all heat pump water heater measures, as well as contractor installed measures in new homes such as insulation, windows, and heating and cooling system installs or sizing.

No site inspections are conducted for the following measures (unless part of new homes inspection process). However all post-purchase incented measures undergo a quality assurance review prior to the issuance of the customer/dealer incentive and recording of savings (i.e. proof of purchase receipt review) and eligible equipment review. Additionally, customer account and customer address are checked to ensure the Company does not double pay for the same measure or double count measure savings.

- Refrigerators / Freezers
- Dishwasher
- Ceiling fans
- Light fixtures
- Clothes washers
- Water heaters (excluding Heat Pump Heaters)
- Evaporative coolers
- Air conditioners
- Flat Panel Televisions / Monitors / Desktops

Other measures

- CFLs – retail channel, manufacturer agreements and program administrator sales record reviews of qualifying equipment. Invoicing and retail pricing is administered by program administrator.

Refrigerator Recycling

Company hires an independent inspector to phone survey ≥ 5 percent program participants and to site inspect ≥ 10 percent of program participants in order to verifying program participation, eligibility of equipment, that vendor pick-up procedures are followed (equipment is disabled at site, kits distributed, etc.) and to survey customer experience.

FinAnswer Express

For trade ally program administrated projects

Lighting projects

- Retrofits - 100 percent pre- and post-installation site inspections by third party consultant of all projects with incentives over a specified dollar amount. Project cost documentation reviewed for all projects.
- New construction - 100 percent post-installation site inspections by third party consultant of all projects with incentives over a specified dollar amount.
- A percent of post-installation site inspections by program administrator of projects with incentives under a specified dollar amount.

Non-lighting projects

- 100 percent of applications with an incentive that exceeds a specified dollar amount will be inspected (via site inspection) by program administrator.
- A minimum of a specified percent of remaining non-lighting applications will be inspected, either in person or via telephone interview, by program administrator.

For Company project manager delivered projects (lighting and non-lighting)

Lighting and non-lighting

- 100 percent pre/post-installation site inspections by third party consulting engineering firms, invoice reconciled to inspection results.

Energy FinAnswer

All projects

- 100 percent pre and/or post-site inspections by third party engineering consultant, inspection is reconciled with project invoice for energy efficiency retrofit measures provided by customers. No pre-inspection for new construction.
- Most projects have a commissioning requirement.

Self Direction

All projects

- 100 percent pre and/or post-site inspections by third party engineering consultant, inspection is reconciled with project invoice for energy efficiency retrofit measures provided by customers. No pre-inspection for new construction.
- Most projects have a commissioning requirement.

All Programs

As part of the third-party program evaluations (two-year cycle) process, the Company is implementing semi-annual customer surveys to collect evaluation-relevant data more frequently to cure for memory loss and other detractors such as customers moving and data not be readily available at evaluation time). This will serve as a further check verifying customer participation and measures installed.

Additional record reviews and site inspections (including metering/data logging) is conducted as part of the process and impact evaluations, a final verification of measure installations.
