

## TECHNICAL MEMORANDUM

Results of Cyanobacteria and Microcystin Monitoring in the Vicinity of the Klamath Hydroelectric Project:

**Prepared for:** Tim Hemstreet (PacifiCorp)  
Linda Prendergast (PacifiCorp)

**Prepared by:** Sam Mackey

**Date:** 8/15/14

## Introduction

This technical memorandum summarizes the results for the public health monitoring conducted during 2014 for cyanobacteria species and the associated toxin, microcystin, in Copco and Iron Gate reservoirs within PacifiCorp's Klamath Hydroelectric Project (Project) and at one monitoring station in the Klamath River below Iron Gate Dam. This monitoring is particularly focused on *Microcystis aeruginosa* (MSAE), which is known to produce microcystin. This monitoring also estimates the presence of other potentially-toxigenic cyanobacteria, including *Anabaena* spp., *Planktothrix* (*Oscillatoria*) spp. and others. This monitoring is being conducted pursuant to Interim Measure 15, Water Quality Monitoring Activities, contained in the Klamath Hydroelectric Settlement Agreement (KHSA) executed between the United States Department of Interior, the states of California and Oregon, PacifiCorp, and other parties.

Results from the public health sampling are used to determine if public health advisories are warranted<sup>1</sup>. In addition to PacifiCorp's website ([www.pacificorp.com/es/hydro/hl/kr.html#](http://www.pacificorp.com/es/hydro/hl/kr.html#)), these memos are also posted on the Klamath Basin Monitoring Program's (KBMP) website ([www.kbmp.net](http://www.kbmp.net)) and inform the Blue Green Algae tracker on the KBMP website

The data summarized in this memorandum include results from the August 5 sampling event as well as the results from all the 2014 public health sampling events (see Appendix 1).

## Methods

PacifiCorp is conducting public health sampling at 5 sites (Table 1) for laboratory analysis of potentially toxigenic cyanobacteria, notably MSAE, and microcystin at:

- Four shoreline sites in coves in Copco and Iron Gate reservoirs (i.e., two cove sites in each reservoir).
- One Klamath River site below Iron Gate Dam near the hatchery bridge.

Samples are planned to be taken at shoreline locations in the reservoirs once in May; and twice per month in June, July, August, September, October, and November. Samples to be collected from the river site below Iron Gate Dam are scheduled to be collected according to the discretion of the sampling entity (PacifiCorp) based on river conditions.

---

<sup>1</sup> The California State Water Resources Control Board provides guidelines for posting advisories in recreation water (SWRCB 2010). SWRCB recommends posting advisories in recreation waters under four circumstances: (1) if "scum is present associated with toxigenic species"; (2) if scum is not present, but the density of *Microcystis* or *Planktothrix* is 40,000 cells/ml or greater; and (3) if scum is not present, but the density of all potentially toxigenic BGA is 100,000 cells/ml or greater, or 4) if microcystin is 8 µg/L or greater.

Public health samples are taken as grab samples offshore according to the standard operating procedure (SOP) developed by the Klamath Blue Green Algae Working Group ([www.kbmp.net/collaboration/klamath-hydroelectric-settlement-agreement-monitoring](http://www.kbmp.net/collaboration/klamath-hydroelectric-settlement-agreement-monitoring)). Samples for potentially toxic phytoplankton are preserved in Lugol's solution and sent to Aquatic Analysts in Friday Harbor, Washington for analysis. Results for cyanobacteria species are reported as individual cells per milliliter.

Samples for determination of microcystin toxin are placed in a cooler on ice and shipped to the EPA Region 9 Laboratory in Richmond, California. The samples are analyzed using the competitive Enzyme-Linked ImmunoSorbent Assay (ELISA) method based on the EnviroLogix QuantiPlate Kit for microcystins. The quantitation limit is 0.18 µg/L or parts per billion (ppb). This test method does not distinguish between the specific microcystin congeners, but detects their presence to differing degrees. That is, ELISA test results yield one value as the sum of measurable microcystin variants.

<b>Location</b>	<b>Approximate River Mile</b>	<b>Site ID</b>
Copco Reservoir at Mallard Cove	201.5	CRMC
Copco Reservoir at Copco Cove	200.0	CRCC
Iron Gate Reservoir at Camp Creek	192.8	IRCC
Iron Gate Reservoir at John Williams campground	192.4	IRJW
Klamath River below Iron Gate dam near hatchery bridge	189.7	KRBI

## Results

All of PacifiCorp's public health sampling sites are currently posted with health advisories. Copco reservoir was posted on June 20<sup>th</sup>, Iron Gate reservoir was posted on July 25<sup>th</sup>, and the station below Iron Gate dam was posted on July 28<sup>th</sup> (see Appendix 1 for previous sampling results). Algae samples are still being collected at the Copco and Iron Gate reservoir sites but those samples are not being rushed and will be available at a later date. Weekly sampling is occurring at KBRI and those data will be reported in bi-monthly public health memos.

Results for the August 5 sampling at KBRI indicate low concentration of toxic algae (Table 2, Appendix 2) but this area will remain posted until after the algal bloom season.

Table 2. Summary of laboratory identification and enumeration										
Date	Time	Location	RM	Sample ID	Depth	MSAE <sup>(1)</sup>	AFA <sup>(2)</sup>	ANA <sup>(3)</sup>	Other <sup>(5), (6), (7), (8), (9), or (10)</sup>	Microcystin (µg/L)
8/05/2014	13:50	KRBI	189.7	KR14839	SG	8,559	40	0	0	*

<sup>1</sup>MSAE = *Microcystis aeruginosa* (cells/mL)

<sup>2</sup>AFA = *Aphanizomenon flos-aquae* (cells/mL)

<sup>3</sup>ANA = *Anabaena flos-aquae* (cells/mL)

Other = either <sup>5</sup>*Planktothrix (Oscillatoria) sp.* or <sup>6</sup>*Gloeotrichia echinulata* or <sup>7</sup>*Anabaena sp.* or <sup>8</sup>*Lyngbya sp.* (cells/mL) or <sup>9</sup>*Anabaena circinalis* (cells/mL) or <sup>10</sup>*Anabaena planctonica* (cells/mL)

“0” value indicates non-detect by analytical laboratory

“\*” value indicates results were not available upon the date this memo was submitted and will be included in subsequent memos as availability allows
