Lewis River Hydroelectric Projects

FERC Project Nos. 935, 2071, 2111, 2213

2011 Annual Report

Lewis River Aquatic Fund Projects

April 2010
Introduction

This 2011 Annual Report prepared by PacifiCorp Energy and the Public Utility District No. 1 of Cowlitz County, Washington (“Cowlitz PUD”) (collectively the “Utilities”) is provided to the Lewis River Settlement Agreement Parties to fulfill the reporting requirement in Article 7.5.3.2 (5) of the Settlement Agreement (SA). This report identifies the actions and selection of Aquatic Resource Projects (Resource Projects) to be funded from the Lewis River Aquatic Fund established under terms of the SA (Article 7.5, see Appendix A). Although the funding process was managed by the Utilities, the Aquatic Coordination Committee (ACC) provided final approval of funded projects. This report includes only Resource Projects selected from the 2010/2011 funding process, additional projects are expected to be selected and funded annually following the process established by the ACC.

This 2011 report is available to the Public on PacifiCorp Energy’s website at http://www.pacificorp.com/content/dam/pacificorp/doc/Energy_Sources/Hydro/Hydro_Licensing/Lewis_River/annual_report_cover.pdf

Copies of this report are available from PacifiCorp Energy upon request.

Background

PacifiCorp Energy owns the Merwin, Yale, and Swift No. 1 hydroelectric projects on the Lewis River in southwest Washington. Cowlitz PUD owns the Swift No. 2 hydroelectric project, also located on the Lewis River. These projects are operated as a coordinated system by PacifiCorp Energy. On November 30, 2004, the Lewis River Settlement Agreement established the Lewis River Aquatics Fund (Fund). The purpose of the Fund is to support resource protection measures through funding aquatic related projects in the Lewis River basin.

As identified in the SA:

“Resource Projects may include, without limitation, projects that enhance and improve wetlands, riparian, and riverine habitats; projects that enhance and improve riparian and aquatic species connectivity that may be affected by the continued operation of the hydroelectric projects; and projects that increase the probability for a successful reintroduction program upstream of Merwin Dam. Species that are targeted to benefit from Resource Projects include Chinook, steelhead, coho, bull trout, chum, and sea-run cutthroat.”

Under the direction of the SA, the Utilities in Consultation with the ACC developed the “Aquatics Fund -- Strategic Plan and Administrative Procedures” (September 2005 – Revised January 2009). This strategic plan provides: (a) a guide to Resource Project development, solicitation, and review; and (b) provides administrative procedures to guide implementation of the Aquatics Fund.
The strategic plan is available to the Public on PacifiCorp Energy’s website at: http://www.pacificorp.com/content/dam/pacificorp/doc/Energy_Sources/Hydro/Hydro_licensing/Lewis_River/Aquatics_Fund_Strategic_Plan_and_Administrative_Procedures_Sep_2005_Revised_January_2009.pdf

On September 3, 2010, PacifiCorp announced the availability of calendar year (CY) 2010/2011 funds for aquatic related projects in the Lewis River Basin (Letter to interested parties from T. Olson, PacifiCorp, see Appendix B). The letter requested that individuals or parties interested in obtaining project funding submit a Pre-Proposal to PacifiCorp. Pre-Proposals were due by October 4, 2010.

In response to the announcement letter, three entities provided seven different project Pre-Proposals. They include:

<table>
<thead>
<tr>
<th>Applicant</th>
<th>Project Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cowlitz Indian Tribe</td>
<td>Eagle Island Habitat Enhancement: Sites B and C</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Lewis River Side Channel Near Muddy River Instream Habitat Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Mainstem Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Side Channel Restoration</td>

<tr>
<td>Lower Columbia Fish Enhancement Group</td>
<td>NF Lewis River Gravel Augmentation</td>
</tr>
<tr>
<td>Lower Columbia Fish Enhancement Group</td>
<td>NF Lewis RM 13.5 Side-Channel Habitat Enhancement</td>
</tr>
</tbody>
</table>

Following the Aquatics Fund – Strategic Plan and Administrative Procedures, PacifiCorp and Cowlitz PUD reviewed and evaluated the Pre-Proposals and, on November 18, 2010, provided the ACC with a list of projects recommended for further consideration (Memo to ACC from Shrier – PacifiCorp and Gritten-MacDonald – Cowlitz PUD, see Appendix C). In general the Utilities’ evaluation suggested that, while additional information is needed before a commitment of funds should be given, the following projects be solicited to provide complete Proposals:

- USDA FS – Muddy River Side Channel Restoration
- USDA FS – Muddy River Mainstem Restoration
- USDA FS – Lewis River Side Channel Near Muddy River Instream Habitat Restoration
- USDA FS – 2011 Pine Creek Nutrient Enhancement by Snowcats and Snowmobiles
- CIT - Eagle Island Habitat Enhancement – Sites B and C
LCFEG – NF Lewis RM 13.5 Side-Channel Habitat Enhancement
The Rush Creek Side Channel Restoration project was not selected for full proposal.

On December 9, 2010, the ACC concurred with the Utilities evaluation to request full proposals for six of the seven submitted pre-proposals. Shortly thereafter, PacifiCorp notified the project sponsors and requested full Proposals by January 28, 2011.

Upon the due date, five of the six full proposals were submitted. The USDA Forest Service proposal for the 2011 Pine Creek Nutrient Enhancement by Snowcats and Snowmobiles was withdrawn on January 25, 2011.

Following receipt of the proposals the Utilities’ Subject Matter Experts evaluated and scored the above proposals. Evaluations were conducted as outlined in the Aquatic Fund – Strategic Plan and Administrative Procedures document.

Consultation with the ACC began on February 10, 2011 with visual presentations of project proposals to include an opportunity for ACC questions and comments. On February 17, 2011, the ACC was provided a memo (Subject: Review of CY 2010 Aquatic Fund Final Proposals, see Appendix D) providing a description of the proposed Resource Projects, the Utilities evaluation of projects, and the Utilities basis for recommending or not recommending a project for funding. The Utilities requested review and ACC comment including its agreement or disagreement with the Utilities evaluation by March 17, 2011.

The ACC met on March 10, 2011 for an Aquatic Fund project discussion meeting followed by an Aquatic Project Proposal Decision Meeting on March 29, 2011. The committee was able to make decisions on three of the four proposals, but determined that more information was needed before a decision could be made on the Cowlitz Indian Tribe’s project, Eagle Island Habitat Enhancement: Sites B and C. A follow-up meeting was held April 6, 2011 to make a final determination on the project. The result of the meeting was to fund the project as-is, without modification.
Consensus was reached on a final Resource Project list as follows:

<table>
<thead>
<tr>
<th>Applicant</th>
<th>Project Title</th>
<th>Approved Funding</th>
<th>Decision</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cowlitz Indian Tribe</td>
<td>Eagle Island Habitat Enhancement: Sites B and C</td>
<td>$85,000</td>
<td>Yes</td>
</tr>
<tr>

<td>Lewis River Side Channel Near Muddy River Instream Habitat Restoration</td>
<td>$42,000</td>
<td>Yes</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Mainstem Restoration</td>
<td>$43,000</td>
<td>No</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Side Channel Restoration</td>
<td>$39,000</td>
<td>Yes</td>
</tr>
</tbody>
</table>

On April 14, 2011 the Utilities notified all ACC Participants of the selected 2010/2011 Aquatic Funding projects approved for full funding (email dated April 14, 2011 - ACC Funding Approvals Matrix, SA 7.5.3.2 - 2010/2011 Aquatic Fund Evaluation Matrix, see Appendix E)

Projects Selected for Funding

The following is a summary description of the individual Resource Projects selected to be funded by the Aquatics Fund. All of these projects are expected to promote the recovery of anadromous fish post re-introduction upstream of the Lewis River dams, and the federally listed bull trout which spend a portion of their life history in the Lewis River hydroelectric project reservoirs. Included for each project is an overview of the original proposal, any ACC modifications to the project, and identification of Resource Project nexus to the hydroelectric projects. Final Resource Project Plans are provided as appendices to this document.

1) Eagle Island Habitat Enhancement – Sites B and C
   This Cowlitz Indian Tribe sponsored project is subsequent to the 2009 Site A Eagle Island Habitat Enhancement proposal that was previously funded by the ACC. Sites B and C have been integrated into one proposal so that they may be implemented simultaneously and thus reduce costs.

   This project will place medium to large log jams and individual pieces of large woody debris through a 1,200 foot long side channel and restore riparian plant communities to result in more vital spawning and rearing habitat along Eagle Island.

   The main objective of this project is to provide more habitat for the six species of salmonid that use the North Fork Lewis River, thus helping to increase the abundance
and distribution of those species along the entire Lewis River System. To accomplish that task a perennial side channel will be augmented with large woody debris to promote scour, pool formation, and habitat. Native plantings and invasive plant removal will help perpetuate the complexity of the system by providing wood and other organic inputs.

ACC representatives agreed to fund this project as proposed and granted funding of $85,000.

The final Resource Project Plan is provided in Appendix F and would be completed in accordance with the schedule below pending acquiring additional funding through other resources:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Timeframe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Final Design and permitting</td>
<td>Late 2011/early 2012</td>
</tr>
<tr>
<td>Construction target date</td>
<td>Summer 2012</td>
</tr>
<tr>
<td>Monitoring</td>
<td>Continue until 2022</td>
</tr>
<tr>
<td>Herbicide treatments</td>
<td>Last treatment in 2015</td>
</tr>
</tbody>
</table>

2) Lewis River Side Channel Near Muddy River Instream Habitat Restoration

This USDA Forest Service sponsored project is intended to enhance the quality of fish habitat of the Lewis River by using approximately 160 pieces of LWM to build complex habitat and specified structure locations. This would:

- Improve habitat complexity and diversity in the side channel using large wood material (LWM);
- Provide refuge during winter flows for juvenile salmonids; and
- Provide increased spawning opportunities for adult salmonids.

ACC representatives agreed to fund this project as proposed and granted funding of $42,000.

The final Resource Project Plan is provided in Appendix G and would be completed in accordance with the schedule below:

<table>
<thead>
<tr>
<th>Activity</th>
<th>Timeframe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monitoring</td>
<td>Summer, 2012</td>
</tr>
<tr>
<td>Project Implementation</td>
<td>July, 2012</td>
</tr>
<tr>
<td>As-built documents</td>
<td>December, 2012</td>
</tr>
<tr>
<td>Pre &amp; Post Project Data</td>
<td>December, 2013</td>
</tr>
</tbody>
</table>

3) Muddy River Side Channel Restoration

This USDA Forest Service proposed project will restore and enhance the side channel and tributary habitat complexity for reintroduced salmon and steelhead by creating 30 rearing and overwintering pools and spawning beds by placing LWM complexes in the side channels.

Approximately 80 pieces of large woody material will be placed in side channel one to create approximately 12 log complexes, and 120 pieces will be placed in side channel
two to create approximately 18 log complexes using a small 16,000lb – 28,000 lb excavator.

The final Resource Project Plan is provided in Appendix H and would be completed in accordance with the schedule below:

- NEPA-Summer: March 2010 (Completed)
- Finalize Project Design: Summer 2010
- Monitoring: Summer 2012
- Implementation: July 2012
- As-built documents: December 2012
- Pre & Post Project Data: December 2013

**Aquatic Fund Accounting**

In March, 2011, PacifiCorp conducted an internal review of the Lewis River Hydroelectric Projects Settlement Agreement, section 7.5 Aquatics Fund, and the accounting documents for the Fund. The following discrepancies were noted and immediately corrected as follows:

- **2008 Bull Trout Funds:** The Panamaker project came in under budget in August of 2008. Originally funded at $25,000, only $13,578.84 was actually used. This fact was documented in the Annual report, but not changed in the accounting spreadsheet.
  - This was corrected on March 22, 2011, backdated to August, 2008, and the balance has been recalculated to reflect the adjustment.

- **2009 & 2010:** Both years were funded at $200,000 (resource funds), should be $325,000.
  - Additional $100,000 was previously going to bull trout funds, but as per SA 7.5.3, bull trout fund stopped in 2008, and the additional $100,000 that should have been put towards resource funds was not entered in the spreadsheet.
  - Additional $25,000 comes from Cowlitz PUD, SA 7.5.2, starting on the April 30th “following the first anniversary of the Issuance of the New License for the Swift No. 2 Project,” which was 2008, making the first anniversary 2009 and continuing each year thereafter until the 20th anniversary (2028).
    - $200,000 + $100,000 + $25,000 = $325,000
    - The additional funds have been accounted for in the accounting spreadsheet and the balance of the fund has been adjusted accordingly.
Conclusion

This report provides the final CY2010/2011 Resource Project descriptions and plans for aquatic projects to be funded from the Lewis River Aquatics Fund. Distribution of funds to these projects will reduce the current Aquatic Fund by $209,000. None of the projects selected by the ACC can be attributed to bull trout enhancement.

According to SA article 7.5.3.2 (5), any ACC member may initiate the Alternative Dispute Resolution Procedures to resolve disputes relating to Resource Projects 30 days after receiving this final report. If no disputes are identified, PacifiCorp and Cowlitz PUD will provide funds to the identified project owners to implement Resource Projects per SA article 7.8.
APPENDIX A
LEWIS RIVER SETTLEMENT AGREEMENT ARTICLE 7.5
7.5 **Aquatics Fund.** PacifiCorp and Cowlitz PUD shall establish the Lewis River Aquatics Fund (“Aquatics Fund”) to support resource protection measures (“Resource Projects”). Resource Projects may include, without limitation, projects that enhance and improve wetlands, riparian, and riverine habitats; projects that enhance and improve riparian and aquatic species connectivity that may be affected by the continued operation of the Projects; and projects that increase the probability for a successful reintroduction program. The Aquatics Fund shall be a Tracking Account maintained by the Licensees with all accrued interest being credited to the Aquatics Fund. PacifiCorp shall provide $5.2 million, in addition to those funds set forth in Section 7.1.1, to enhance, protect, and restore aquatic habitat in the Lewis River Basin as provided below. Cowlitz PUD shall provide or cause to be provided $520,000 to enhance, protect, and restore aquatic habitat in the Lewis River Basin as provided below; provided that Cowlitz PUD’s funds may only be used for Resource Projects upstream of Swift No. 2, including without limitation the Bypass Reach. The Licensees shall provide such funds according to the schedules set forth below.

7.5.1 **PacifiCorp’s Contributions.**

a. PacifiCorp shall make funds available as follows: on each April 30 commencing in 2005, $300,000 per year until 2009 (a total of $1.5 million).

b. For each of the Merwin, Yale, and Swift No. 1 Projects, PacifiCorp shall make one-third of the following funds available as follows after the Issuance of the New License for that Project: on each April 30 commencing in 2010, $300,000 per year through 2014 (a total of $1.5 million); on each April 30 commencing in 2015, $100,000 per year through 2018 (a total of $400,000); and on each April 30 commencing in 2019, $200,000 per year through 2027 (a total of $1.8 million); provided that, for any New License that has not been Issued by April 30, 2009, the funding obligation for that Project shall be contributed annually in the same amounts but commencing on April 30 following the first anniversary of Issuance of the New License for that Project.

c. PacifiCorp shall contribute $10,000 annually to the Aquatics Fund as set forth in Section 7.1.1.

7.5.2 **Cowlitz PUD’s Contributions.** Cowlitz PUD shall make or cause to be made funds available as follows: $25,000 per year on each April 30 following the first anniversary of the Issuance of the New License for the Swift No. 2 Project through the April 30 following the 20th anniversary of the Issuance of the New License for the Swift No. 2 Project (a total of $500,000); and a single amount of $20,000 on the April 30 following the 21st anniversary of the Issuance of the New License for the Swift No. 2 Project.

7.5.3 **Use of Funds.** Decisions on how to spend the Aquatics Fund, including any accrued interest, shall be made as provided in Section 7.5.3.2 below; provided that (1) at least $600,000 of such monies shall be designated for projects designed to benefit bull trout according to the following schedule: as of April 30, 2005, $150,000; as of April 30,
2006, $100,000; as of April 30, 2007, $150,000; as of April 30, 2008, $100,000; and on
or before the April 30 following the fifth anniversary of the Issuance of all New Licenses,
$100,000; and such projects shall be consistent with bull trout recovery objectives as
determined by USFWS; (2) fund expenditures for the maintenance of the Constructed
Channel (Section 4.1.3) shall not exceed $20,000 per year on average; (3) if studies
indicate that inadequate “Reservoir Survival,” defined as the percentage of actively
migrating juvenile anadromous fish of each of the species designated in Section 4.1.7 that
survive in the reservoir (from reservoir entry points, including tributary mouths to
collection points) and are available to be collected, is hindering attainment of the Overall
Downstream Survival standard as set forth in Section 3, then at least $400,000 of such
monies shall be used for Resource Projects specifically designed to address reservoir
mortality; and (4) $10,000 annually shall be used for lower river projects as set forth in
Section 7.1.1. Projects shall be designed to further the objectives and according to the
priorities set forth below in Section 7.5.3.1.

7.5.3.1 Guidance for Resource Project Approval and Aquatics Fund Expenditures.

a. Resource Projects must be consistent with applicable Federal,
State, and local laws and, to the extent feasible, shall be consistent with policies
and comprehensive plans in effect at the time the project is proposed. These may
include, but are not limited to, Washington’s Wild Salmonid Policy, the Lower
Columbia River Bull Trout Recovery Plan, and the Lower Columbia River
Anadromous Fish Recovery Plan.

b. The Aquatics Fund shall not be used to fund Resource Projects that
any entity is otherwise required by law to perform (not including obligations
under this Agreement or the New Licenses for use of the Aquatics Fund), unless
by agreement of the ACC.

c. The Licensees shall evaluate Resource Projects using the following
objectives:

(1) benefit fish recovery throughout the North Fork Lewis
River, with priority to federal ESA-listed species;

(2) support the reintroduction of anadromous fish throughout
the Basin; and

(3) enhance fish habitat in the Lewis River Basin, with priority
given to the North Fork Lewis River.

For the purposes of this Section 7.5, the North Fork Lewis River refers to the
portion of the Lewis River from its confluence with the Columbia River upstream
to the headwaters, including tributaries except the East Fork of the Lewis River.

The Licensees shall also consider the following factors to reflect the feasibility of
projects and give priority to Resource Projects that are more practical to
implement:

(i) Whether the activity may be planned and initiated within one year,

(ii) Whether the activity will provide long-term benefits,

(iii) Whether the activity will be cost-shared with other funding sources,

(iv) Probability of success, and

(v) Anticipated benefits relative to cost.

7.5.3.2 Resource Project Proposal, Review, and Selection.

(1) By the first anniversary of the Effective Date, the Licensees shall develop, in Consultation with the ACC, (a) a strategic plan consistent with the guidance in Section 7.5.3.1 above to guide Resource Project development, solicitation, and review; and (b) administrative procedures to guide implementation of the Aquatics Fund. Both may be modified periodically with the approval of the ACC.

(2) Any person or entity, including the Licensees, may propose a Resource Project. In addition, the Licensees may solicit Resource Projects proposals from any person or entity.

(3) The Licensees shall review all Resource Project proposals, applying the guidance set forth in Section 7.5.3.1. The Licensees shall provide an annual report describing proposed Resource Project recommendations to the ACC. The date for submitting such report shall be determined in the strategic plan defined in subsection 7.5.3.2(1) above. The report will include a description of all proposed Resource Projects, an evaluation of each Resource Project, and the basis for recommending or not recommending a project for funding.

(4) The Licensees shall convene a meeting of the ACC on an annual basis, no sooner than 30 days and no later than 60 days after distribution of the report set forth in Section 7.5.3.2(2), for Consultation regarding Resource Projects described in the report.

(5) Licensees shall modify the report on proposed Resource Projects, based on the above Consultation, and submit the final report to the ACC within 45 days after the above Consultation. Any ACC member may, within 30 days after receiving the final report, initiate the ADR Procedures to resolve disputes relating to Resource Projects. If the ADR Procedures are commenced, the Licensees shall defer submission of the
final report on Resource Projects to the Commission, if necessary, until after the ADR Procedures are completed. If the ADR Procedures fail to resolve all disputes, the Licensees shall provide the comments of the ACC to the Commission. If no ACC member initiates the ADR Procedures, the Licensees shall submit the final report to the Commission, if necessary, within 45 days after submission of the final report to the ACC.
APPENDIX B

MEMORANDUM DATED SEPTEMBER 3, 2010

LETTER TO INTERESTED PARTIES FROM T. OLSON, PACIFICORP

AVAILABILITY OF FUNDS FOR AQUATIC RELATED PROJECTS
September 3, 2010

Subject: Availability of Funds for Aquatic Related Projects in the Lewis River Basin

Dear Interested Party,

PacifiCorp owns the Merwin, Yale, and Swift No. 1 hydroelectric projects on the Lewis River in southwest Washington. Public Utility District No. 1 of Cowlitz County, Washington (Cowlitz PUD) owns the Swift No. 2 hydroelectric project, also located on the Lewis River. These projects are operated as a coordinated system. On November 30, 2004, the Lewis River Settlement Agreement established the Lewis River Aquatics Fund (Fund). On June 26, 2008, the Federal Energy Regulatory Commission acknowledged this fund as a stipulation of project operating licenses. The purpose of the Fund is to support resource protection measures via aquatic related projects (Resource Projects) in the Lewis River basin. The projects are evaluated for funding according to their:

1. Benefit to fish recovery throughout the North Fork Lewis River, with priority to federal ESA-listed species;
2. Support of the reintroduction of anadromous fish throughout the Basin; and
3. Enhancement to fish habitat in the Lewis River Basin, with priority given to the North Fork Lewis River.

Species that are targeted to benefit from Resource Projects include Chinook, steelhead, coho, bull trout, chum, and sea-run cutthroat.

This letter is to provide you the opportunity to submit proposals for Resource Project funding. The total Fund amount available this year is limited to $487,401.13 for Resource Projects and $270,533.74 for Bull Trout Projects. The selection of Resource Projects will be conducted in two phases. To be considered, applicants must submit a completed Pre-Proposal Form (see attachment A for Form) by close of business October 4, 2010. Pre-Proposals will be evaluated with some projects appropriately selected for further consideration (see attachment B for evaluation criteria). If selected, applicants will be notified in early December, and be requested to submit a formal proposal by mid-January. The Utilities and representatives of the Lewis River Aquatic Coordination Committee will finalize the list of successful projects in early April 2011. Shortly thereafter the Utilities will submit the final list to the Federal Energy Regulatory Commission to meet the submittal deadline of April 15, 2011.

Please give attention to this excellent opportunity. If you should have any questions feel free to contact Mr. Frank Shrier, PacifiCorp, (503) 813-6622. We look forward to your response in early October.

Sincerely,

Todd Olson
Director, Compliance Hydro Resources

APPENDIX C
MEMORANDUM DATED NOVEMBER 11, 2010
MEMO TO ACC FROM SHRIER — PACIFICORP AND GRITTEN-MACDONALD — COWLITZ PUD
REVIEW OF CY 2011 AQUATIC FUND PRE-PROPOSALS

CEII – This document is considered PUBLIC information
November 11, 2010

To: Memo to Lewis River Aquatics Coordination Committee representatives

From: Frank Shrier – PacifiCorp Energy and Diana Gritten-MacDonald – Cowlitz PUD

Subject: Review of CY 2011 Aquatic Fund Pre-Proposals

On September 3, 2010 PacifiCorp Energy announced the availability of funds for aquatic related projects in the Lewis River Basin (letter to interested parties from T. Olson). The letter requested that individuals or parties interested in obtaining project funding submit a Pre-Proposal to PacifiCorp Energy. Pre-Proposals were due by October 4, 2010. At that time and in following the Aquatics Fund – Strategic Plan and Administrative Procedures, PacifiCorp Energy and Cowlitz PUD (Utilities) reviewed the Pre-Proposals and, with this memo are providing the ACC with a recommended project list for further consideration. Following ACC review and agreement with this project list, PacifiCorp Energy will request complete proposals from selected project proponents. The schedule for proposal request is early December with complete proposals due in late-January 2011.

In response to the announcement letter, three entities provided seven different project Pre-Proposals. They include:

<table>
<thead>
<tr>
<th>Entity</th>
<th>Project Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>USDA Forest Service</td>
<td>Lewis River Side Channel Near Muddy River Instream Habitat Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Side Channel Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Rush Creek Side Channel Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Mainstem Channel Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>2011 Pine Creek Nutrient Enhancement by Snowcats and Snowmobiles</td>
</tr>
<tr>
<td>Lower Columbia Fish Enhancement Group</td>
<td>NF Lewis RM 13.5 Side-Channel Habitat Enhancement</td>
</tr>
<tr>
<td>Cowlitz Indian Tribe</td>
<td>Eagle Island Habitat Enhancement - Sites B and C</td>
</tr>
</tbody>
</table>

PacifiCorp Energy and Cowlitz PUD subject matter experts have evaluated and scored the above proposals. Evaluations were conducted as outlined in the Aquatic Fund – Strategic Plan and Administrative Procedures document. For ACC review, the Utilities have attached to this memo an Evaluation matrix (Attachment 1). Costs for each project are also included. Individual Pre-Proposals have been attached for reference (Attachments 2-8).

The Utilities evaluation suggests that while additional information is needed before a commitment of funds should be given, we propose that the following six projects be solicited to provide complete Proposals:
The Utilities propose to not further consider the USDA FS project titled: ‘Rush Creek Side Channel Restoration’ because of concerns the USFWS has expressed previously for a similar project proposal.

For your information, PacifiCorp has included a financial reporting on the Aquatics Resource and Bull Trout (7.5) tracking accounts (Attachment 12) as of 10/31/10.

The Utilities are submitting this document and attachments for review in hopes of reaching concurrence on projects for further consideration. If, in your review of the Pre-proposals, you have comments or questions to ask the Project proponent, please provide comments to me and we will include them in the formal Proposal request.

To meet the Funding Process Timeline as included in the Aquatics Fund – Strategic Plan and Administrative Procedures (see Table 4.1). ACC representatives should provide comments and their project selection by December 2, 2010. On December 9, 2010, project selection will be finalized during the ACC meeting. Soon after, the Utilities will request formal Proposals from identified project proponents.

APPENDIX D

MEMORANDUM DATED FEBRUARY 17, 2011

MEMO TO ACC FROM SHRIER – PACIFICORP AND GRITTEN-MACDONALD – COWLITZ PUD

REVIEW OF CY 2011 AQUATIC FUND PROPOSALS
Hello,

The Utilities have completed its evaluation of the 2010/2011 Aquatic Fund Proposals. I have attached the cover letter and evaluation matrix for your review.

You may also view the aquatic fund projects on the Lewis River website at the following link:
http://www.pacificorp.com/es/hydro/hl/lr.html#

Click on “Aquatics Coordination Committee 2011” to display the proposals.

The Utilities welcome your review and comments - including your agreement or disagreement with the Utilities’ evaluations - and ask that you provide them to PacifiCorp by March 17, 2011. This timing is so that we may compile results and distribute the collective ACC’s evaluation prior to the April 14, 2010, ACC meeting. At that meeting, the ACC should work to finalize its selection of to-be-funded projects. To continue to meet the Funding Process Timeline as included in the Plan, the ACC must reach agreement on projects no later than mid-April.

Best regards,

February 17, 2011

Memo to Lewis River Aquatics Coordination Committee representatives

From: Frank Shrier – PacifiCorp Energy and Diana Gritten-MacDonald – Cowlitz PUD

Subject: SA 7.5.3.2 - Review of CY 2011 Aquatic Fund Proposals

In September 2005 the Lewis River Aquatics Coordination Committee (ACC) established the Aquatics Fund – Strategic Plan and Administrative Procedures to meet obligations of the Lewis River Settlement Agreement. Since that time PacifiCorp Energy and the Public Utility District No. 1 of Cowlitz County (Cowlitz PUD) (collectively the Utilities) have been working under the Plan and with the ACC to identify and select aquatic resource projects for funding.

On December 9, 2010, the ACC selected six aquatic project proposals for additional consideration. Shortly thereafter, PacifiCorp Energy notified the project sponsors and requested full proposals by January 28, 2011. On February 10, 2011, PacifiCorp Energy provided copies of each final project proposal to the ACC. In addition, each applicant presented a PowerPoint at the ACC meeting on February 10, 2011, to present further project detail and address ACC questions and comments, if any. The proposed projects include:

<table>
<thead>
<tr>
<th>Applicant</th>
<th>Project Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cowlitz Indian Tribe</td>
<td>Eagle Island Habitat Enhancement: Sites B &amp; C</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Lewis River Side Channel Near Muddy River Instream Habitat Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Mainstem Restoration</td>
</tr>
<tr>
<td>USDA Forest Service</td>
<td>Muddy River Side Channel Restoration</td>
</tr>
</tbody>
</table>

The Utilities subject matter experts have evaluated and scored the above proposals. Evaluations were conducted as outlined in the Aquatic Fund – Strategic Plan and Administrative Procedures (PacifiCorp and Cowlitz PUD, September 2005 – Revised January 2009). For ACC review, the Utilities have attached an Evaluation Matrix to this memo, which identifies the average total score of the Utility reviewers for each Proposal and comments/questions (Attachment 1). Costs for each project are also included. Individual Proposals have been previously provided to the ACC and are available upon request. They are also available for viewing on the Lewis River website at the following link: http://www.pacificorp.com/es/hydro/hl/lr.html#. Click on “Aquatics Coordination Committee 2011” to display the proposals.
By this memo the Utilities provide the ACC with a list of the projects and our recommendation for funding in order of evaluation ranking.

1. **Muddy River Side Channel Restoration** – Funding request is for $39,000. Utilities recommend: Funding

2. **Lewis River Side Channel Near Muddy River Instream Habitat Restoration** – Funding request is for $42,000. Utilities recommend: Funding

3. **Eagle Island Habitat Enhancement: Sites B and C** – Funding request is for $85,000. Utilities recommend: Funding

4. **Muddy River Mainstem** – Funding request is for $43,000. Utilities recommend: Funding

The next step in the process is for the ACC to review and provide input on selection of projects to be funded. An opportunity will be available to discuss the projects at the upcoming March 10, 2011, ACC meeting. The Utilities welcome review and your comments including your agreement or disagreement with the Utilities evaluation, and ask that you provide them to PacifiCorp by **March 17, 2011**. This timing is so that we may compile results and distribute the collective ACC’s evaluation prior to the April 14, 2010, ACC meeting. At that meeting, the ACC should work to finalize its selection of to-be-funded projects. To continue to meet the Funding Process Timeline as included in the Plan, the ACC must reach agreement on projects no later than mid-April.

Thank you for your attention to this matter, we look forward to receiving your input.
Attachment 1

Lewis River Aquatics Fund – Individual Project Evaluation Sheet

For each Evaluation Criteria listed below, a determination of “meets” or “does not meet” or a score of 1 to 5 is assigned by project evaluator. If during the Pre-Proposal review the project receives a “does not meet” response to any “Consistency with Fund Objectives and Priorities” component, the proposal will be dropped from further evaluation and funding. A 1 is the lowest score (does not or very unlikely to meet objectives), a 5 the highest score (greater likelihood of meeting objectives). Scores are multiplied by the assigned weighting then totaled for a single project score.

A. Consistency with Fund Objectives and Priorities (Meets or Does not meet):

1. Benefit fish recovery throughout the North Fork Lewis River, priority to federal ESA-listed species (Bull Trout, Chinook, Steelhead, and Chum)
2. Support the re-introduction of anadromous fish throughout the Basin (Spring Chinook, Winter Steelhead, Coho, and Sea-run Cutthroat)
3. Enhance fish habitat in the Lewis River Basin, with priority given to the North Fork Lewis River.

<table>
<thead>
<tr>
<th>B. How does the project benefit priority fish species and stocks? (Spring Chinook, Winter Steelhead, Coho, Bull Trout, and Sea-run Cutthroat) (40 % weight):</th>
<th>Score = ______ multiplied by 4.0 = ______</th>
</tr>
</thead>
<tbody>
<tr>
<td>Does the proposal clearly describe the expected fish benefits of the project?</td>
<td></td>
</tr>
<tr>
<td>Does the proposal clearly identify the salmonid species and stocks that would benefit from the project?</td>
<td></td>
</tr>
<tr>
<td>Does the project address a limiting factor(s) to the target species, a limiting life history stage, or an important habitat process or condition?</td>
<td></td>
</tr>
<tr>
<td>Will the project provide long-term benefits? Does the project provide tangible, on-the-ground benefits?</td>
<td></td>
</tr>
<tr>
<td>Is the project generally consistent with the intent (strategies, measures, actions, and priorities) of applicable recovery and planning documents (e.g. Lower Columbia Salmon Recovery Plan)?</td>
<td></td>
</tr>
</tbody>
</table>
### C. Scientific validity and technical quality of proposed project (40% weight):
- Is the problem to salmonids and the associated objectives of the proposed project clearly described?
- Does the proposal employ appropriate techniques, adequate design and proper siting?
- Is it clear how the proposed project will meet its intent and purpose?
- Is it likely that the project will achieve stated objectives?
- Does the project provide for implementation monitoring? If so what monitoring protocols will be used? Are the benefits or outcomes from the project measurable (e.g. number of trees planted or amount of structure placed)?
- Have watershed processes and a larger global aspect been considered in developing the proposal?
- How does the project fit within the fish needs as identified through watershed planning documents, recovery plans, etc?
- Has the project proposal received professional review?
- Does the proposal identify any negative or positive impacts to other resource areas (e.g. wildlife, recreation, etc.)?

Score = _____ multiplied by 4.0 = ______

### D. Ability for the project proponent to successfully implement proposed project (10% weight)
- Does proposal include both appropriate numbers of personnel and experienced team members?
- Has the applying party submitted proposals in previous years? If their proposal received funding, has it been successfully implemented?
- Will the project be able to obtain the necessary permits in a timely manner?

Score = _____ multiplied by 1.0 = ______

### E. Cost effectiveness and timeliness (10% weight)
- Does the project have matching funding or in-kind participation? Is there collaboration between numerous parties?
- Is the project budget identified by work effort (administration, materials, labor, etc.) and is it appropriate?
- Does the project have a reasonable cost relative to the anticipated benefits?
- Is the project self-maintaining once completed? If not, how will maintenance be achieved?
- Can the project activities be planned and initiated in one year?

Score = _____ multiplied by 1.0 = ______

**Fund Objectives:**
1. Benefit fish recovery throughout the North Fork Lewis River, priority to federal ESA-listed species
2. Support the re-introduction of anadromous fish throughout the basin
3. Enhance fish habitat in the Lewis River Basin, with priority given to North Fork Lewis River

---

**Resource Funds (requested):**

- $209,000.00

APPENDIX F

EAGLE ISLAND HABITAT ENHANCEMENT – SITES B AND C
PROPOSAL FORM
Lewis River Aquatic Fund

1. Project Title

Eagle Island Habitat Enhancement: Sites B and C

2. Project manager

Rudy Salakory, Biologist
Cowlitz Indian Tribe
PO Box 2547
Longview, WA 98632
Phone: 360.575.6227
Email: rsalakory@cowlitz.org

3. Identification of problem or opportunity to be addressed

Problem:
In the watershed of the North Fork and lower mainstem of the Lewis River, there is scarce high-quality riparian zone and in-stream spawning/rearing habitat. This habitat is essential for species listed under the Endangered Species Act (ESA) that use the Lewis River basin, including:

1. Lower Columbia River Chinook salmon, listed as a threatened species,
   - Lewis River is designated critical habitat

2. Columbia River Chum salmon, listed as a threatened species,
   - Lewis River is designated critical habitat

3. Lower Columbia River Steelhead, listed as a threatened species,
   - Lewis River is designated critical habitat

4. Lower Columbia River Coho salmon, listed as a threatened species,
   - Lewis River is proposed as critical habitat

5. Bull Trout, listed as a threatened species,
   - Lewis River is designated critical habitat

6. Eulachon, listed as a threatened species,
   - Lewis River is proposed as critical habitat

These species have endured many impacts that threaten their persistence in the watershed. The impacts arise from various sources and include: alteration of natural flow regimes, degradation of riparian habitat function, loss of floodplain and off-channel habitat areas, inputs of point source and non-point source pollution and impacts of urbanization.
**Opportunity:**
This project proposal develops the opportunity to benefit fish recovery throughout the North Fork Lewis River, with priority for federal ESA-listed species, by restoring critical riparian zone and in-stream habitat at Eagle Island Sites B and C (Fig. 1). Enhancement of existing riparian forest and in-stream habitat will support larger populations of anadromous fish. This project will also increase the overall abundance of functional habitat, which is in short supply throughout the lower Lewis River.

Our proposal to the ACC is an opportunity to leverage PacifiCorp mitigation funding in the Lewis River watershed at a better-than 6:1 ratio. We will use this ACC award as an anchoring match to leverage additional funding from the Salmon Recovery Fund Board. We estimate the entire project cost for Eagle Island Sites B and C as $535,000, but request only $85,000 from the ACC. If for any reason the balance of necessary funding for this whole project is not secured, our ACC award will be returned in full to PacifiCorp.

The Cowlitz Tribe successfully used this leveraging approach in the ACC 2010 round to leverage an additional $355,000. We anticipate continuing to use this paired funding mechanism to finance restoration projects in the Eagle Island reach of the Lewis River for many years.

The Tribe has integrated Sites B and C into one proposal in order to reduce the significant amount of staging necessary to access the sites. Combining these projects and implementing them simultaneously reduces costs that would be incurred if they were funded separately and implemented sequentially.

Finally, sites B and C are the second and third projects in a large suite of salmonid habitat restoration opportunities developed within Eagle Island reaches for the Eagle Island Technical Oversight Group (TOG). The Cowlitz Tribe successfully obtained funding for Site A and will begin implementing that project in 2011. Other subsequent projects are in scoping and development.

**4. Background, Combined Sites B and C**

**Geomorphic Setting**

The project sites are located in the broad alluvial lower Lewis River valley. The river channel is unconfined at this location. Channel type is pool-riffle dominated by gravel and cobble substrate. Gradient is very flat at approximately 0.1%. Summer low-flow wetted-width of the Lewis River south channel at this location is approximately 180 feet. There are few well-defined pools; past habitat surveys indicated most of the habitat in this reach is composed of glide habitat (PacifiCorp 2004).

The historical record (aerial photos dating back to 1938 and survey maps dating back to 1854) indicates a history of active channel dynamics in the project area. Changes in channel shape and structure are due to natural flood processes, as well as human activities including gravel mining. Aerial photos since 1938 show flow in both the north and south Eagle Island channels, with summer flow slowly shifting to the south channel over time.

At the reach scale, channel complexity, available habitat cover, and the health of native riparian forest communities have been reduced since historical conditions. Reach-scale fluvial evolution is progressing toward a simplified channel planform as former multithread channels are abandoned. Past gravel mining, and possibly the effects of the hydropower system on sediment transport, have contributed to incision that has resulted in abandonment of off-channel habitat and has appeared to reduce the frequency of channel adjustment.
Large Woody Debris Conditions
LWD in the mainstem Lewis River has been quantified as part of a number of studies, including the Stream Channel Morphology and Aquatic Habitat Study (BioAnalysts, et al. 2003, WTS-3 Report) and a habitat assessment conducted by the Lower Columbia Fish Recovery Board (LCFRB 2004a). The WTS-3 Study counted 72+ pieces (>15 cm diameter and >7.6 meters long) in the Eagle Island channels in 2000 and the LCFRB study (2004a) counted approximately 113 pieces (>10 cm diameter and >7.6 meters long).

Large woody debris (LWD) conditions in the lower river below Merwin Dam were evaluated as part of the Lewis River LWD Study (Interfluve et al. 2008). The study estimated the historical abundance of LWD pieces by reach using a regression model developed from old-growth streams throughout Washington State (Fox and Bolton 2007). These data suggest an historical LWD frequency of approximately 70 pieces per 100 meters, for a total of 2,709 pieces (>10 cm diameter and >2 meters long) within the Eagle Island reaches. Thus, historical LWD numbers may have been on the order of 20 times larger than current numbers in the Eagle Island reaches.

As part of the LWD Study, a survey was conducted on August 10, 2007 to identify the quantity of “key pieces” of LWD in the mainstem. A key piece was defined as a piece that was judged to be self-stabilized within the bankfull channel. In the Eagle Island reaches (Lewis 4A and 4B) a total of 5 key pieces were identified; 4 were cottonwoods and one was of unknown species. One piece in reach 4B was serving as a key piece of a large jam that extended up onto the river right flood terrace (South channel, river mile 11.3). The presence of large key pieces is critical in a system the size of the Lewis, where most wood will only be retained in the channel as part of large jams that are initiated by very large (i.e. old-growth) key pieces.

In general, the LWD study concluded that LWD dynamics have been severely altered in the mainstem. The ability of the Lewis River to support significant quantities of LWD is impacted by: 1) the series of hydroelectric dams that interrupt wood transport, 2) past harvest of large trees that could provide a source for key pieces, 3) alteration of the natural flood regime that could serve to recruit wood from the stream corridor, and 4) channel alterations that reduce channel migration processes that could recruit LWD.

Fish Species and Use
The lower North Fork Lewis Basin is used by 6 populations of salmon and steelhead, including fall and spring Chinook, winter and summer steelhead, coho, and chum. The fall Chinook run consists of an early-spawning “tule” run as well as a late-spawning “bright” run. Fall Chinook make extensive use of the lower mainstem for spawning. The highest concentrations of Chinook spawning occur within the 5 mile reach downstream of Merwin Dam; however, Chinook spawning also occurs within the Eagle Island reaches.

Since the early 1980s, WDFW has conducted juvenile seining targeting fall Chinook in the spring and early summer (typically late May to early July). The seining effort is conducted in order to capture juvenile fall Chinook for tagging and is not specifically designed to map spatial distribution or habitat preferences for juvenile rearing. Nevertheless, the data does provide some indication of occurrence of juvenile rearing in the project area. Data from 2004 to 2008 indicate 700 to 3,600 have been captured near Site B; and 0 to over 10,000 have been captured near Site C. Based on species composition for the entire lower river, the vast majority of these juvenile fish are Chinook, with smaller amounts of coho, trout, and chum (very few chum would be expected in these catches).
In addition, unpublished 2008 and 2009 WDFW survey data for winter steelhead show multiple redds in close proximity to the entrance of the Site C side channel (Fig. 2).

Although eulachon are known to ascend as high in the Lewis River as the base of Merwin Dam, it is not expected that these enhancements to alcove and side-channel structure and habitat will benefit the species, either returning spawners, eggs or larvae.

Though Bull Trout are known from the basin, none are expected in this reach.

**Site Description: Site B**

Site B is located on the right bank (west) side of the south channel 750 meters below the upstream end of Eagle Island, and consists of an alcove and backchannel complex that is approximately 220 meters long (45.935751N -122.689128E, Fig. 1). This site is located on river right across from the Site A side-channel outlet. This site contains numerous meander-scar traces from historical mainstem channel locations. The upstream portion of the site consists of a large alcove and the downstream portion consists of an exposed bar and low-flow backwater channel. The low-flow backwater channel is part of an abandoned channel that begins just downstream of the alcove. The upstream portion of the channel is filled with silty sand and is overgrown with vegetation. The inlet is just upstream of a riffle in the main channel and the outlet enters the main channel downstream of the riffle. There is some ponding of water in this overflow channel. This area appeared to contain an active side-channel in the 1974 aerial photos and a connected backwater channel as recently as 1996.

This site contains moderate channel complexity but few pieces of LWD with the exception of a large log jam on the terrace at the southern end of the alcove. This jam is likely a relic of the 1996 flood.

This area is characterized by shallow water habitats, emergent wetlands, and shrub/scrub habitats. Vegetation is a combination of common wetland shrub species such as red-osier dogwood (Cornus sericea), pacific ninebark (Physocarpus capitatus), willows, spirea, and areas of dense reed canarygrass. Emergent wetland species include soft rush (Juncus effuses), toad rush (Juncus buffoensis), dagger tipped rush (Juncus ensifolius), bur-reed (Sparganium erectum), and slough sedge (carex obnupta).

Evidence of past Chinook spawning (redd features) in this area were observed during a field visit.

**Site Description: Site C**

Site C is located on the right bank (west) side of the south channel 1120 meters below the upstream end of Eagle Island, and consists of a perennially-active side-channel that is approximately 350 meters long (45.931993N -122.688658E, Fig. 1). Site C is located approximately 1,500 feet downstream of Site B and the outlet of Site A. The site consists of a low-water side-channel complex. Most of the bar/island is overtopped above bankfull flows. There is very little LWD in this side-channel. The island is dominated by willows and there are mature riparian trees at the upstream end of the island. The river right streambank is composed of willows, spirea, reed canary grass, and some mature cottonwood.

5. Project Objective(s)

The main objective of this project is to provide more spawning and juvenile rearing habitat for the 6 populations of salmonids that use the North Fork Lewis River, thus helping to increase the abundance
and distribution of those species along the entire Lewis River System. To accomplish this, we will restore and enhance the riparian zone, in-stream habitat and channel form at two sites in the Eagle Island reach of the south channel of the Lewis River. Native plantings and invasive plant removal will help perpetuate the complexity of the system by providing wood and other organic inputs.

6. Tasks

Task 1: Landowner coordination and whole-project scheduling
Task 2: Apply for necessary permits, (Right of entry, HPA, JARPA, ESA limit 8 SPIF)
Task 3: RFQ and hiring of contractors for construction, invasive species removal and planting
Task 4: Coordinate purchase and delivery of plant materials LWD materials
Task 5: Project implementation: Site Access
Task 6: Project implementation: Excavation and LWD placement
Task 7: Project implementation: Invasive removal and plantings
Task 8: Assess planting installation success/ prepare short report
Task 9: Prepare as-built plans
Task 10: Conduct monitoring to assess survivorship of plantings, construction efficacy
Task 11: Prepare monitoring report

7. Methods

**Site B Treatment Approach:**
Site B provides an excellent opportunity to enhance existing complexity by adding a series of apex jams designed to split flow into historical channel scar depressions. The preliminary design includes three bar apex jams to enhance channel dynamics and split flow conditions. Bar apex jams are expected to capture additional wood during floods. The development of large jams is likely to re-establish a dynamic, shifting channel condition in this reach, adding to habitat complexity. Construction of a lateral scour pool jam in the alcove will enhance pool scour and cover. Habitat cover wood in the existing backwater channel will increase habitat cover and complexity. Placement of floodplain wood will provide roughness elements that are lacking due to the absence of a robust native riparian vegetation community.

The vegetation enhancement strategy in this area will focus on establishing a medium-density tree canopy and creating isolated patches of shrub cover. Plantings will occur along the banks and low lying portions of the treatment area. Tree species will include those suited to thrive in moist to seasonally flooded conditions, such as Oregon ash and black cottonwood. The goal of these tree plantings is to establish a tree canopy to provide shade over surface waters, increase organic inputs to the stream and provide for future woody debris recruitment. Plantings in this area will be spaced to prevent complete canopy closure, which could result in the loss of the shade intolerant emergent species currently located in the treatment area. In addition to the proposed tree plantings, a small amount of native shrub species will also be planted in isolated clusters throughout the treatment area. Shrub species will be limited to willows (*Salix spp*) and spirea. The goal of the shrub plantings is to increase wildlife habitat values, provide opportunities for amphibian egg laying, and stabilization of soils.

Lastly, in order to increase the success of the proposed plantings and limit the spread of invasives, Himalayan blackberry eradication will be necessary within and adjacent to the enhancement areas. Himalayan blackberry can be effectively eliminated with herbicide applications in the fall followed up
with spot treatments the following spring. This is the most effective way to eliminate existing spot patches of Himalayan blackberry.

The general types and function of Site B large woody debris installations, as well as riparian planting zones, are detailed in the 30% design plans (attached as Appendix “C”)

**Site B Anticipated Benefits:**
This project will benefit off-channel and near-shore rearing for salmon and steelhead, and will provide spawning habitat in the connected side channel. Construction of apex jams and activation of side-channels will enhance channel complexity. Other wood placements will increase the availability of pools and wood cover that will provide refuge habitats for salmonid rearing and holding. The vegetation enhancements will result in increased habitat complexity and native plant species diversity. In addition, water quality benefits such as reduced stream water temperatures and attenuation of sediments should be achieved once riparian plantings have matured.

**Site C Treatment Approach:**
Site C contains moderate complexity in the form of a multi-thread channel, but LWD quantities are very low or non-existent, and complex rearing cover is virtually absent. The preliminary design includes the construction of two apex jams to encourage the continuation of split flow conditions. Two to three lateral scour pool jams are included to promote pool scour and provide cover. Multiple placements of habitat cover wood provide additional rearing cover and complexity.

The island itself currently contains high numbers of willow and red-osier dogwood saplings and therefore the revegetation plan does not include any planting on the island. Revegetation on the island will only be necessary in areas disturbed during construction. Although the river-right streambank on Eagle Island does contain some mature black cottonwoods, the current number of trees and shrubs is generally low. Plantings in this area will increase wildlife habitat values, provide bank stability, and eventually outcompete reed canarygrass stands through shading. Suitable species for planting in this area include Oregon ash, black cottonwood, red alder, willow, dogwood, and spirea.

Lastly, in order to increase the success of the proposed plantings and limit the spread of invasives, Himalayan blackberry eradication will be necessary within and adjacent to the enhancement areas. As in the previous treatment site, chemical control methods will be the most effective way to eliminate existing spot patches of Himalayan blackberry.

The general types and function of Site C large woody debris installations, as well as riparian planting zones, are detailed in the 30% design plans (attached as Appendix “C”)

**Site C Anticipated Benefits:**
This project will benefit off-channel and near-shore rearing for salmon and steelhead and will provide spawning habitat in the connected side channel. Construction of apex jams and activation of side-channels will enhance channel complexity. Other wood placements will increase the availability of pools and wood cover that will provide refuge habitats for salmonid rearing and holding.

8. **Specific Work Products**

There will be 5 specific work products:
1. Stakeholder meetings to bring the existing 30% designs to 100% completion, including stamped engineering plans

2. Construction and placement of around 170 sticks of LWD in the following structures (Sites B and C combined):
   - 5 apex jams
   - 3 lateral pool scour jams
   - 7 placements of floodplain wood
   - 2 placements of habitat cover wood

3. Native riparian zone plantings

4. Construction completion report detailing final construction, lessons learned and photographs of the finished project

5. A final report describing the entire process and the state of the project two years out (two years after implementation)

9. Project Duration

Once this project is successfully funded by both the ACC and the SRFB, stakeholder meetings, final design and permitting will begin in late 2011-early 2012 with a construction start date target of late summer 2012. Initial narrative reports will be completed and distributed in late 2012. Multi-year monitoring and effectiveness monitoring will continue until 2022. Multi-year herbicide treatments may be necessary as well; the last treatments will be applied in 2015. A final report will be submitted in 2015.

10. Permits

This project will need five permits. As a partner in development of this project, WDFW (the landowner) has indicated that right of entry and permission to implement the project in this proposal will be granted. SEPA review is bypassed via the fish habitat exemption. ESA consultation requirements will be met under the limit 8 process through SRFB funded grants. This project meets the criteria for the Washington State Streamlined Joint Aquatics Resource Permit Application (JARPA) process as well as the Nationwide Permit 27 (USACE), Section 404 and Section 10, if required. Washington Dept. of Ecology will be notified regarding section 401 water quality certification. A WDFW Hydraulic Project Approval (HPA) will be needed. An Aquatics Land Use Authorization will be needed from Washington State Department of Natural Resources for entry and work on this site.

11. Matching Funds

No in-kind is expected for the ACC award component. As previously noted, however, we intend to use this ACC award of $85,000 to leverage an additional $450,000 in funding from the SRFB, for a whole-project total of $535,000; representing a better-then 6:1 leveraging of funds.

12. Peer Review of Proposed Project
This project has been completed in coordination with a Technical Oversight Group (TOG) made up of local technical stakeholders involved in aquatic habitat management in the Eagle Island area. Each step of this study has been conducted in coordination with the TOG and the TOG has provided reviews of each technical memo produced as part of this effort. TOG members include: Frank Shrier (PacifiCorp Energy), Eli Asher (Lower Columbia Fish Recovery Board), Donna Bighouse, Brian Calkins, and Ron Roler (WA Dept of Fish and Wildlife), Bill Dygert, Pat Lee (Clark County), and Rudy Salakory (Cowlitz Indian Tribe) as project proponent and project manager. In addition to stakeholder review, the 30% plans were also reviewed by Michelle Cramer, Chief Environmental Engineer for WA Department of Fish and Wildlife.

13. Budget

See Appendix “A” for detailed budget

14. Photo Documentation

Photographic documentation of this project from before, during, and after construction will be an integral part of this project. Photographs will be part of the final report, as well as monitoring reports.

**Total Budget** $534,024.00
Appendix B:
Types and function of woody debris structures described in the 30% designs.

**Bar Apex Jams:**
Bar apex jams are positioned with the intent of creating or maintaining a split flow condition around the jam. These jams consist of key members oriented parallel to the flow with racked members positioned perpendicular to the flow along the upstream portion of the jam. Bar apex jams create scour just upstream of the jam and deposition just downstream. They are designed to capture additional fluvial wood from upstream. These jams provide habitat cover and velocity refuge but are mainly designed to enhance channel complexity.

**Lateral Scour Pool Jams:**
Lateral scour pool log jams are positioned to induce pool scour. They are typically placed along the outside of meander bends, though they may be placed at other locations along the channel boundary as appropriate. These jams provide the functions of habitat cover wood, but also maintain pools, sort gravels, and capture additional wood.

**Habitat Cover Wood:**
Habitat cover wood consists of individual placements or small accumulations (1-10 pieces) within the active channel that are designed to provide holding and rearing cover. These structures provide velocity refuge during high flow, provide cover from predators, and provide a substrate for macro-invertebrate colonization.

**Floodplain Wood:**
Floodplain wood consists of individual pieces or small accumulations of wood placed on the floodplain surface to increase floodplain roughness where natural floodplain roughness elements (e.g. vegetation or logs) are insufficient. These placements reduce avulsion risk and erosion associated with unstable channels until a point at which natural vegetation and natural wood recruitment are able to provide natural stability.
Appendix C:
30% Designs for Site B and Site C are attached.
EXISTING DATA

GENERAL TOPOGRAPHIC INFORMATION IS PROVIDED FROM LIDAR FROM CLARK COUNTY AND SPECIFIC PROJECT AREA SURVEY
PERFORMED BY INTER-FLUE, INC.

SOILS

LEWIS RIVER GRAVEL BAR.

UTILITIES

THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR HAVING UTILITIES LOCATED PRIOR TO CONSTRUCTION ACTIVITIES.

THE CONTRACTOR SHALL IMMEDIATELY CONTACT THE AFFECTED UTILITY SERVICE TO REPORT ANY DAMAGED OR DESTROYED
UTILITIES. THE CONTRACTOR SHALL PROVIDE EQUIPMENT OR LABOR TO AID THE AFFECTED UTILITY SERVICE IN REPAIRING
DAMAGED OR DESTROYED UTILITIES AT NO COST TO THE OWNER.

CONSTRUCTION ACCESS

THE CONTRACTOR IS SOLELY RESPONSIBLE FOR OBTAINING ANY REQUIRED TRAFFIC CONTROL OR ACCESS PERMITS.

THE CONTRACTOR IS SOLELY RESPONSIBLE FOR PROVIDING ANY REQUIRED TRAFFIC CONTROL INCLUDING, BUT NOT LIMITED TO,
SIGNAGE AND FLAGGERS.

ALL SAPLINGS AND TREES TO BE TRANPLANTED OR REMOVED SHALL BE APPROVED BY THE OWNER’S REPRESENTATIVE AND
CLEARLY MARKED.

ALL EQUIPMENT, MATERIALS AND PERSONNEL SHALL REMAIN WITHIN THE LIMITS OF DISTURBANCE.

THE CONTRACTOR SHALL KEEP THE WORK AREAS IN A NEAT AND SIGHTLY CONDITION FREE OF DEBRIS AND LITTER FOR THE
DURATION OF THE PROJECT.

COFFERDAM

WORK AREA(S) SHALL BE ISOLATED BY COFFERDAMS INSTALLED UPSTREAM AND DOWNSTREAM OF ENHANCEMENT AREA.
COFFERDAM MAY BE CONSTRUCTED WITH SAND FILLED BULK BAGS AND LINED WITH VISQUEEN ADJACENT TO ACTIVE FLOW IN THE
CHANNEL.

DEWATERING OF WORK AREA(S) SHALL OCCUR CONCURRENT WITH FISH RESCUE. THE OWNER WILL BE RESPONSIBLE FOR
CONDUCTING AND COORDINATING THE FISH RESCUE. THE CONTRACTOR SHALL COORDINATE DEWATERING WITH FISH RESCUE
ACTIVITIES.

PUMPING SHALL BE PERFORMED TO KEEP WORK AREA DEWATERED. PUMPED DISCHARGE SHALL RELEASE SEDIMENT–LADEN
WATER IN A MANNER THAT DOES NOT CAUSE CONTAMINATION OR INCREASE TURBIDITY OF SURFACE WATERS. (SEE CONTROL
DEWATERING).

FISH RESCUE

COFFER DAM SHALL BE INSTALLED TO ISOLATE WORK.

INITIAL DEWATERING SHALL OCCUR SLOWLY BY INCREMENTALLY REDUCING COFFER DAMMED AREAS OVER A PERIOD OF
30 MINUTES TO ALLOW TIME FOR FISH TO FIND RESIDUAL POOLS WITHOUT RISK OF SUDDEN STRANDING.

RESIDUAL POOLS WITHIN THE DEWATERED CONSTRUCTION SITE SHALL BE PUMPED DRY USING SCREENED PUMP INTAKES.
TRAPPED FISH SHALL BE RESCUED.

FISH BARRIERS AND PUMP INTAKES SHALL ADHERE TO NMFS SCREENING CRITERIA, NATIONAL MARINE FISHERIES SERVICE
JUVENILE FISH SCREEN CRITERIA (REVISED FEBRUARY 16, 1995) AND ADDENDUM JUVENILE FISH SCREEN CRITERIA FOR
PUMP INTAKES (MAY 9, 1999).

ALL FISH RESCUE EFFORTS SHALL BE SUPERVISED BY A QUALIFIED FISHERIES/AQUATIC BIOLOGIST EXPERIENCED WITH THE
COLLECTION AND HANDLING OF SALMONID FISHES FROM CONSTRUCTION SITES.

ALL FISH TRAPPED IN RESIDUAL POOLS WITHIN THE PROJECT AREA WILL BE CAREFULLY COLLECTED BY SEINE AND/OR
DIP NETS AND PLACED IN CLEAN TRANSFER CONTAINERS WITH PORTABLE AERATION.

CAPTURED FISHES SHALL BE IMMEDIATELY RELEASED TO DOWNSTREAM OR UPSTREAM OF THE CONSTRUCTION SITE.
DEPENDING ON SPECIES AND LIFECYCLE.

TREE SALVAGE

ANY REMOVED VEGETATION GREATER THAN 6 INCHES DIAMETER AND 15 FEET LONG SHOULD BE INCORPORATED Into LOG JAM STRUCTURES. CONTRACTOR IS RESPONSIBLE FOR REMOVING SMALLER
CLEANSING AND SCRUBBING DEBRIS FROM THE SITE AT THE END OF THE PROJECT UNLESS DIRECTED BY THE
OWNER’S REPRESENTATIVE. REEDS THAT ARE REMOVED DURING CONSTRUCTION WILL BE USED AS PART OF THE
PROJECT. TREES SHALL BE REMOVED WITH ROOT WADS ATTACHED UNLESS THEY SIZE PROHIBITS THEIR
SAFE REMOVAL WITH ROOT WAD ATTACHED. IN THESE CASES THE TREES SHALL BE FELLED AND THE ROOT
WADS SALVAGED. FREE TOPS WILL BE UTILIZED AND BE CUT TO FIELD DIRECTED LENGTHS DEPENDENT ON TREE SIZE AND SPECIES.

LIVE TREES

ALL TREES NOT MARKED FOR REMOVAL SHALL BE LEFT STANDING UNDISTURBED. LOGGING ACTIVITY SHALL
NOT DEBARK OR DAMAGE LIVE TREES.

**BOULDER BALLAST AND WOOD CABLELING**

**BOULDER BALLAST NOTES**

**DESCRIPTION**

This work consists of installing logs with root wads into anchored log structures as shown on the plans and as directed by the owner representative.

**MATERIALS**

Anchors for this work will consist of cable boulders. Boulders shall be non-fractured basalt with a minimum specific gravity of 2.65.

Cable shall be galvanized steel core, and shall have a minimum diameter of 1/2 inch.

Swags shall be zinc plated copper and shall meet the performance requirements of MIL-STD-51644, Rev. C, sleeves, swaging wire rope. Minimum of 3 swages per connection.

Epoxy for anchoring shall be hit RE Polypropylene or approved equal.

**CONSTRUCTION**

Final positioning of the anchored log structures shall be in the approximate location as shown on the plan and as approved in the field by the owner representative.

**GENERAL NOTES**, Cont'd

Final positioning of the anchored log structures shall be in the approximate location as shown on the plans and as approved in the field by the owner representative.

Boulder boulders shall be secured as shown on the plans.

Drill holes in solid rock and avoid any cracks or fractures. Holes shall be 9/16 inch in diameter. Holes must be drilled 6 inches, minimum, into rock. Holes must be cleaned of loose rock fragments and powder with a brush and water. Holes must be clean of all dust, debris, oil, and soap residues. The holes must flush clear to insure no material exists between the cable, epoxy, and rock surface. Install epoxy per manufacturer's recommendations.

Cable shall be wrapped once around log before ends are inserted into the drilled holes filled with epoxy. Wipe cable with clean acetone soaked rag to remove oils and grease prior to insertion into epoxy filled hole. Fill drill holes enough to ensure complete coverage with epoxy. Insert cable into hole so that end of cable hits the bottom of the hole. Excess epoxy should come out of the top of the hole as cable is seated in drill hole.

Minimum 3 swages per connection. Swages shall be installed in accordance with the manufacturer's recommendations, spacing and swage tool diameter for the size and load rating of the cable being used. Swaging tool shall be checked for proper compression, according to manufacturer's recommendations, using a gauge provided by the manufacturer of the swage fittings being installed.
THE CONTRACTOR IS ADVISED THAT THE PROJECT AREA DRAINS TO A SALMON BEARING STREAM AND/OR STATE WATERS AND THAT THE CONTRACTOR IS RESPONSIBLE TO PROTECT THE RECEIVING WATERS FROM DELUZERIOUS EFFECTS OF CONSTRUCTION.

THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING THE EROSION CONTROL MEASURES SHOWN OR DESCRIBED ON THE DRAWINGS AND ANY ADDITIONAL MEASURES REQUIRED BY THE CONTRACTORS MEANS AND METHODS OF CONSTRUCTION AS NEEDED TO CONTROL EROSION AND SEDIMENT AT THE CONSTRUCTION SITE. IN ADDITION TO THE ABOVE, THE CONTRACTOR SHALL TAKE ANY ADDITIONAL MEASURES TO PROTECT THE SURFACE WATER, TURF, GROUND WATER QUALITY, OR SEDIMENT MANAGEMENT STANDARDS. EROSION CONTROL MEASURES SHALL BE MAINTAINED THROUGHOUT THE COURSE OF CONSTRUCTION AND UNTIL ALL DISTURBED EARTH IS STABILIZED IN FINISH GRADES.

EROSION CONTROL

CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING AND MAINTAINING ALL NECESSARY EROSION CONTROL FACILITIES TO COMPLY WITH APPLICABLE EROSION CONTROL REGULATIONS.

AN APPROVED EROSION AND SEDIMENT CONTROL (ESC) PLAN IS PROVIDED IN THESE DRAWINGS. THE BID AND CONSTRUCTION CONTRACT ARE BASED UPON IT. THE CONTRACTOR SHALL SOLEY BE RESPONSIBLE FOR PROVIDING EROSION CONTROL MEASURES TO COMPLY WITH THE APPLICABLE REQUIREMENTS.

THE FOLLOWING RECOMMENDATIONS FOR AN ESC PLAN WILL PROVIDE A GUIDELINE FOR THE CONTRACTOR TO DEVELOP AND IMPLEMENT AN ESC PLAN.

A. THE IMPLEMENTATION OF THESE RECOMMENDATIONS FOR AN ESC PLAN AND THE CONSTRUCTION, MAINTENANCE, REPLACEMENT, AND UPGRADE OF THESE ESC FACILITIES IS THE RESPONSIBILITY OF THE CONTRACTOR UNTIL ALL CONSTRUCTION IS COMPLETED AND APPROVED, AND VEGETATION IS ESTABLISHED.

B. THE BOUNDARIES OF THE CLEARING LIMITS SHOWN ON THIS PLAN SHALL BE CLEARLY FLAGGED IN THE FIELD PRIOR TO CONSTRUCTION. DURING THE CONSTRUCTION PERIOD, NO DISTURBANCE BEYOND THE FLAGGED CLEARING LIMITS SHALL BE PERMITTED. THE FLAGGING SHALL BE MAINTAINED BY THE CONTRACTOR FOR THE DURATION OF CONSTRUCTION.

C. ESC FACILITIES AS APPROXIMATELY SHOWN ON THIS PLAN ARE TO BE CONSTRUCTED IN CONJUNCTION WITH THE CONSTRUCTION ACTIVITY AND IN SUCH A MANNER AS TO AVOID ANY DISTURBED AREA. ANY SUCH DISTURBED AREA MUST BE LEFT IN PLACE UNTIL ALL CONSTRUCTION IS COMPLETED AND ALL SEDIMENT AND SEDIMENT-LADEN WATER DO NOT ENTER THE DRAINAGE SYSTEM, OR VIOLATE APPLICABLE WATER STANDARDS.

D. THE ESC FACILITIES SHOWN ON THE ESC PLAN ARE THE MINIMUM REQUIREMENTS FOR ANTICIPATED SITE CONDITIONS. DURING THE CONSTRUCTION PERIOD, THESE ESC FACILITIES SHALL BE UPGRADED AS NEEDED FOR STORM EVENTS AND TO ENSURE THAT SEDIMENT AND SEDIMENT-LADEN WATER DO NOT LEAVE THE SITE.

E. THE ESC FACILITIES SHALL BE INSPECTED DAILY BY THE CONTRACTOR AND MAINTAINED AS NECESSARY TO ENSURE THEIR CONTINUING FUNCTIONING.

F. FROM OCTOBER 1 – APRIL 30, NO SUBSTANTIALLY UNWORKED SOILS SHALL REMAIN EXPOSED FOR MORE THAN TWO DAYS AT A TIME. FROM MAY 1 – SEPTEMBER 30 NO SUBSTANTIALLY UNWORKED SOILS SHALL REMAIN EXPOSED FOR MORE THAN SEVEN DAYS AT A TIME.

SEDIMENT FENCES

1. THE SILT FENCE SHALL BE PURCHASED IN A CONTINUOUS ROLL, CUT TO THE LENGTH OF THE BARRIERS TO AVOID JUNCTURES. JOINTS ARE NECESSARY. SILT FENCE SHALL BE SPACED TOGETHER ONLY AT A SUPPORT POST, WITH A MINIMUM 12 INCH OVERLAP, AND BOTH ENDS SECURELY FASTENED TO THE POST, OR OVERLAP 2"x2" POSTS AND ATTACH AS APPROVED BY THE OWNER’S REPRESENTATIVE.

2. THE SILT FENCE IS TO BE INSTALLED AT LOCATIONS SHOWN ON THE PLAN. THE FENCING MATERIALS SHALL BE PLACED AND DRIVEN SECURELY INTO THE GROUND A MINIMUM OF 12 INCHES.

3. THE SILT FENCE SHALL HAVE A MINIMUM VERTICAL BURIAL OF 6 INCHES. ALL EXCAVATED MATERIAL FROM FILTER FABRIC FENCE INSTALLATION SHALL BE BACKFILLED AND COMPACTED, ALONG THE ENTIRE DISTURBED AREA.

4. STANDARD OR HEAVY DUTY SILT FENCE SHALL HAVE MANUFACTURED STITCHED LOOPS FOR 2" x 2" POST INSTALLATION.

5. SILT FENCES SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFUL PURPOSE, BUT NOT BEFORE THE UPLINE AREA HAS BEEN PERMANENTLY PROTECTED AND STABILIZED.

6. SILT FENCES SHALL BE INSPECTED BY THE CONTRACTOR IMMEDIATELY AFTER EACH RAINFALL, AND AT LEAST DAILY DURING PROLONGED RAINFALL. ANY REQUIRED REPAIRS SHALL BE MADE IMMEDIATELY.

7. ON PROJECT COMPLETION THE CONTRACTOR SHALL REMOVE ALL SILT FENCES AND TEMPORARY EROSION CONTROL MEASURES FROM THE PROJECT SITE.

INSPECTION AND MAINTENANCE

ALL BEST MANAGEMENT PRACTICES (BMPs) SHALL BE INSPECTED, MAINTAINED, AND REPAIRED AS NEEDED TO ASSURE CONTINUED PERFORMANCE OF THEIR INTENDED FUNCTION. ALL ON-SITE EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSPECTED AT LEAST ONCE EVERY SEVEN DAYS AND WITHIN 24 HOURS AFTER ANY STORM EVENT GREATER THAN 0.15 INCHES OF RAIN PER 24 HOUR PERIOD.

SEDIMENT MUST BE REMOVED FROM SILT FENCES BEFORE IT REACHES APPROXIMATELY ONE THIRD THE HEIGHT OF THE FENCE, ESPECIALLY IF HEAVY RAINS ARE EXPECTED.

STABILIZE SOILS AND PROTECT SLOPES

FROM MAY 1 THROUGH SEPTEMBER 30, ALL EXPOSED SOILS SHALL BE PROTECTED FROM EROSION BY MULCHING, PLASTIC SHEETING, HYDROSEED COVERING, OR OTHER APPROVED METHODS WITHIN ONE WEEK OF GRADING. FROM OCTOBER 1 THROUGH MARCH 31, ALL EXPOSED SOILS MUST BE PROTECTED WITHIN 2 DAYS OF GRADING. SOILS SHALL BE STABILIZED BEFORE A WORK SHUTDOWN, HOURLY BASED ON THE WEATHER FORECAST. SOIL STABILIZATION MUST BE COMPLETED WITHIN THE PERIOD SHOWN ON THE PLAN. ALL DISTURBED AREAS NOT INDICATED IN THE CONTRACT DOCUMENTS FOR OTHER PERMANENT STABILIZATION MEASURES, DESIGN, CONSTRUCT, AND PHASE CUT AND FILL SLOPES IN A MANNER THAT WILL MAXIMIZE EROSION CONTROL MEASURES TO ALL DISTURBED SLOPES BY PROVIDING TEMPORARY BARRIERS. STORMWATER FROM OFF SITE SHOULD BE HANDLED SEPARATELY FROM STORMWATER GENERATED ON SITE.

AFTER FINAL SITE STABILIZATION

ALL TEMPORARY EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE REMOVED WITHIN 30 DAYS AFTER FINAL SITE STABILIZATION IS ACHIEVED OR AFTER THE TEMPORARY BMPS ARE NO LONGER NEEDED. TRAPSED SEDIMENT SHALL BE REMOVED FROM THE SITE OR INCORPORATED INTO FINISHED GRADED DISTURBED SOIL AREAS RESULTING FROM REMOVAL SHALL BE PERMANENTLY STABILIZED.

CONSTRUCTION ACCESS

PUBLIC RIGHTS-OF-WAY SHALL BE KEPT IN A CLEAN AND SERVICEABLE CONDITION AT ALL TIMES. IN THE EVENT MATERIALS ARE INADVERTENTLY DEPOSITED ON ROADWAYS THE MATERIAL SHALL BE PROMPTLY REMOVED. MATERIALS ARE TO BE SWEEPED AND REMOVED PRIOR TO ANY STREET FLUSHING.

SILT FENCE SHALL BE PLACED ALONG ACCESS ROUTES, STOCKPILE AREA, AND DOWNSLOPE OF OUTLET COFFER DAM.

SILT FENCE

NOTES:

1. FENCE SHALL BE INSTALLED ON SLOPES STEEPER THAN 2:1.

2. JOINTS IN FILTER FABRIC SHALL BE OVERLAPPED 12 INCHES AT POST.

3. SILT FENCE SHALL BE SECURED TO FILTER FABRIC OR TO ATTACH FABRIC.

4. REMOVE SEEDING WHEN IT REACHES 1/2 FENCE HEIGHT.

CONTROL POLLUANTS

CONTRACTOR MUST PREPARE A SPILL PREVENTION CONTROL AND COUNTER MEASURE (SPCC) PLAN AND IMPLEMENT REQUIRED MEASURES TO CONTROL POLLUTANTS. SEE THE SPECIAL PROVISIONS.

ALL POLLUTANT DISCHARGES OTHER THAN SEDIMENT THAT OCCUR ON SITE DURING CONSTRUCTION SHALL BE HANDLED AND DISPOSED OF IN A MANNER THAT DOES NOT CAUSE CONTAMINATION OF STORMWATER, GROUNDWATER, OR SOILS TO REMAIN ON SITE.

THE USE OF LIME, FLY ASH, OR OTHER SOIL AMENDMENTS THAT COULD ALTER THE PH OF DISCHARGE WATERS IS PROHIBITED.

SEDIMENT CONTROLS

THE BUFFET LAYER, NATIVE TOP SOIL, AND NATURAL VEGETATION SHALL BE RETAINED IN AN UNDISTURBED STATE TO THE MAXIMUM EXTENT PRACTICAL. THE CONTRACTOR SHALL MAINTAIN ALL AREAS WHICH ARE NOT TO BE DISTURBED, INCLUDING SETBACKS, SENSITIVE/CRITIAL AREAS AND THEIR BURIERS, TREES AND DRAINAGE STRUCTURES NOT TO BE DISTURBED SHALL BE MARKED AND FLAGGED BEFORE CONSTRUCTION ACTIVITIES ARE INITIATED. THESE AREAS SHALL BE PROTECTED BY THE CONTRACTOR WITH BARRIER FENCING AS SHOWN ON THE DRAWING AND AS DIRECTED BY THE ENGINEER WHEN CONSTRUCTION ACTIVITIES ARE INITIATED.

THE CONTRACTOR MAY ELECT TO CONSTRUCT TEMPORARY SEDIMENTATION PONDS, TANKS, OR OTHER FacILITIES AS NECESSARY TO CONTROL RUNOFF AND/OR TO FILTER DEWATERING DISCHARGE.

CONTROL DEWATERING

HIGHLY TURBID OR CONTAMINATED DEWATERING WATER FROM CONSTRUCTION EQUIPMENT OPERATION SHALL BE PREVENTED FROM DELIVERING TO THE RIVER. DEWATERING OPTIONS FOR DEWATERING DISCHARGE INCLUDE:

1. SEDIMENT-LADEN WATER MAY BE PUMPED TO AN UPLAND AREA AND ALLOWED TO SHEET FLOW OVER UNDISTURBED GROUND THROUGH EXISTING VEGETATION TO INTRODUCE INTO THE GROUND.

2. USE OF AN APPROPRIATELY SIZED AND MAINTAINED SEDIMENTATION BAG (TO CONTROL DEWATERING), OR OTHER MEANS AS NECESSARY TO CONTROL DEWATERING.

BOULDER BALLAST NOTES

DESCRIPTION
This work consists of installing logs with root wads into anchored log structures as shown on the plans and as directed by the owners representative.

MATERIALS
Anchors for this work will consist of cabled boulders. Boulders shall be non-fractured basalt with a minimum specific severity of 2.65.

Cable shall be galvanized steel core, and shall have a minimum diameter of 1/2 inch. Swages shall be zinc plated copper and shall meet the performance requirements of Military Standard MS-91844, Rev. C, Sleeves, Swaging-Wire Rope. Minimum of 3 swages per connection.

Epoxy for anchoring shall be Hilti Hit Re adhesive or approved equal.

CONSTRUCTION
Final positioning of the anchored log structures shall be in the approximate location as shown on the plans and as approved in the field by the owners representative.

GENERAL NOTES, CONT'D

Final positioning of the anchored log structures shall be in the approximate location as shown on the plans and as approved in the field by the owners representative.

Boulder boulders shall be secured as shown on the plans.

Drill holes in solid rock and avoid any cracks or fractures. Holes shall be 6/16 inch in diameter. Holes must be drilled 6 inches, minimum, into rock. Holes must be cleaned of loose rock fragments and powder with a brush and water. Holes must be clean of all dust, debris, oil, and soap residues. The holes must flush clear to ensure no material exists between the cable, epoxy, and rock surface. Install epoxy per manufacturer's recommendations.

Cable shall be wrapped once around log before ends are inserted into the drilled holes filled with epoxy. Wrap cable with clean acetone soaked rag to remove oils and greases prior to insertion into epoxy filled hole. Fill drill holes enough to ensure complete coverage with epoxy. Insert cable into hole so that end of cable hits the bottom of the hole. Excess epoxy should come out of the top of the hole as cable is seated in drill hole.

Minimum 3 swages per connection. Swages shall be installed in accordance with the manufacturer's recommendations, spacing and swage tool diameter for the size and load rating of the cable being used. Swaging tool shall be checked for proper compression, according to manufacturer's recommendations, using a gauge provided by the manufacturer of the swage fittings being installed.
Erosion Control

CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING AND MAINTAINING ALL NECESSARY EROSION CONTROL FACILITIES TO COMPLY WITH APPLICABLE EROSION CONTROL REGULATIONS.

AN APPROVED EROSION AND SEDIMENT CONTROL (ESC) PLAN IS PROVIDED IN THESE DRAWINGS. THE BID AND CONSTRUCTION CONTRACT ARE BASED UPON IT. THE CONTRACTOR WILL BE SOLELY RESPONSIBLE FOR PROVIDING EROSION CONTROL MEASURES TO COMPLY WITH ALL REQUIREMENTS OF THE ESC PLAN. THE CONTRACTOR IS RESPONSIBLE FOR THE SHEET CONSTRUCTION AND IMPLEMENT AN ESC PLAN.

A. THE IMPLEMENTATION OF THESE RECOMMENDATIONS FOR AN ESC PLAN AND THE CONSTRUCTION, MAINTENANCE, REPLACEMENT, AND UPGRADE OF THESE EROSION CONTROL FACILITIES IS THE RESPONSIBILITY OF THE CONTRACTOR UNTIL ALL CONSTRUCTION IS COMPLETED AND APPLIABLE AND, AND VENTILATION IS ESTABLISHED.

B. THE BOUNDARIES OF THE CLEARING LIMITS SHOWN ON THIS SHEET SHALL BE CLEARLY FLAGGED IN THE FIELD PRIOR TO CONSTRUCTION. DURING THE CONSTRUCTION PERIOD, NO DISTURBANCE BEYOND THE FLAGGED CLEARING LIMITS SHALL BE PERMITTED. THE FLAGGING SHALL BE MAINTAINED BY THE CONTRACTOR FOR THE DURATION OF CONSTRUCTION.

C. ESC FACILITIES AS APPROXIMATELY SHOWN ON THIS SHEET ARE TO BE CONSTRUCTED IN CONJUNCTION WITH AND AS PART OF THE NORMAL B Yeilding ACTIVITIES, AND IN SUCH A MANNER AS TO ALLOW THAT EROSION DEDICATION LÄDER WÄNEN DO NOT ENTER THE DRAINAGE SYSTEM, OR VIOlATE APPLICABLE WATER STANDARDS.

D. THE ESC FACILITIES SHOWN ON THE SHEET ARE THE MINIMUM REQUIREMENTS FOR CONSTRUCTION DURING THE CONSTRUCTION PERIOD, THESE FACILITIES SHALL BE UPGRADED AS NECESSARY FOR STORM EVENTS TO ENSURE THAT SEDIMENT AND SEDIMENT LÄDER WÄNEN DO NOT LEAVE THE SITE.

E. THE ESC FACILITIES SHALL BE INSPECTED DAILY BY THE CONTRACTOR AND MAINTAINED AS NECESSARY TO ENSURE THEIR CONTINUING FUNCTIONALITY.

F. FROM OCTOBER 1 - APRIL 30, NO SUBTILLY UNWORKED SOILS SHALL REMAIN EXPOSED FOR MORE THAN TWO DAYS AT A TIME. FROM MAY 1 - SEPT 30 NO SUBTILLY UNWORKED SOILS SHALL REMAIN EXPOSED FOR MORE THAN SEVEN DAYS AT A TIME.

SEDIMENT FENCES

1. THE SILT FENCE SHALL BE PURCHASED IN A CONTINUOUS ROLL, CUT TO THE LENGTH OF THE BARRIER TO AVOID JOINTS. IF JOINTS ARE NECESSARY, SILT FENCE SHALL BE SPACED TOGETHER ONLY AT A SUPPORT POST, WITH A MINIMUM 12 INCH OVERLAP, AND BOTH ENDS SECURELY FASTENED TO THE POST, OR OVERLAP 2" X 2" POST AND ATTACH AS APPROVED BY THE OWNER'S REPRESENTATIVE.

3. STANDARD OR HEAVY DUTY SILT FENCE SHALL HAVE MANUFACTURED STITCHED LOOPS FOR 2' X 2' POST INSTALLATION.

4. SILT FENCE SHALL BE REMOVED WHEN THEY HAVE SERVED THEIR USEFUL PURPOSE, BUT NOT BEFORE THE UPLAPED AREA HAS BEEN PERMANENTLY PROTECTED AND STABILIZED.

5. SILT FENCE SHALL BE INSPECTED BY THE CONTRACTOR IMMEDIATELY AFTER EACH RAINFALL, AND AT LEAST DAILY DURING PROLONGED RAINFALL. ANY REQUIRED REPAIRS SHALL BE MADE IMMEDIATELY.

6. ON PROJECT COMPLETION THE CONTRACTOR SHALL REMOVE ALL SI T FENCES AND TEMPORARY EROSION CONTROL MEASURES FROM THE PROJECT SITE.

CONTROL POLLUTANTS

CONTRACTOR MUST PREPARE A SPILL PREVENTION CONTROL AND COUNTER MEASURE (SPCC) PLAN AND IMPLEMENT REQUIRED MEASURES TO CONTROL POLLUTANTS. SEE THE SPECIAL PROVISIONS.

ALL POLLUTANT DISCHARGES OTHER THAN SEDIMENT THAT OCCUR ON THE SITE DURING CONSTRUCTION SHALL BE HANDLED AND DISPOSED OF IN A MANNER THAT DOES NOT CAUSE CONTAMINATION OF STORMWATER, GROUNDWATER, OR SOILS TO REMAIN ON THE SITE.

THE USE OF LIME, FLY ASH, OR OTHER SOIL AMENDMENTS THAT COULD ALTER THE pH OF DISCHARGE WATERS IS PROHIBITED.

SEDIMENT CONTROLS

THE DUFF LAYER, NATIVE TOP SOIL, AND NATURAL VEGETATION SHALL BE RETAINED IN AN UNDISTURBED STATE TO THE MAXIMUM EXTENT PRACTICAL. THE CONTRACTOR SHALL AVOID ALL AREAS WHICH ARE NOT TO BE DISTURBED, INCLUDING SETBACKS, SENSITIVE/CRITICAL AREAS AND THEIR BURNT'S, TREES AND DRAINAGE STRUCTURES NOT TO BE DISTURBED SHALL BE MARKED ANDフラTED BEFORE CONSTRUCTION ACTIVITIES ARE INITIATED. THESE AREAS SHALL BE PROTECTED BY THE CONTRACTOR WITH BARRIER FENCING AS SHOWN ON THE DRAWING AND AS DIRECTED BY THE ENGINEER WHEN CONSTRUCTION ACTIVITIES ARE INITIATED.

THE CONTRACTOR MAY ELEC TO CONSTRUCT TEMPORARY SEDIMENT PONDS, TANKS, OR OTHER FACILITIES AS NECESSARY TO CONTROL RUNOFF AND/OR TO FILTER DewaterING DISCHARGE.

CONTROL DWETEARING

HIGHLY TURBED OR CONTAMINATED DWETEARING WATER FROM CONSTRUCTION EQUIPMENT OPERATION SHALL BE PREVENTED FROM DELIVERING SEDIMENT TO THE DRAINAGE SYSTEM. OPTIONS FOR DWETEARING DISCHARGE INCLUDE:

1. SEDIMENT-WATER MAY BE PUMPED TO AN UPLAND AREA AND ALLOWED TO SHEET FLOW OVER UNDISTURBED GROUND THROUGH EXISTING VEGETATION TO INTEGRATE INTO THE GROUND.

2. USE OF AN APPROPRIATELY LARGE AND MAINTAINED SEDIMENT BAG OR STRUCTURE TO ENCOURAGE WATER TO DISCHARGE TO THE DRAINAGE SYSTEM.
APPENDIX G

LEWIS RIVER SIDE CHANNEL NEAR MUDDY RIVER INSTREAM HABITAT RESTORATION
1. Project Title

**Lewis River Side Channel Near Muddy River Instream Habitat Restoration**

2. Project Manager

**Adam Haspiel**  
Mt. St. Helens National Volcanic Monument  
42218 NE Yale Bridge Road  
Amboy, WA 98604  
360-449-7833  
360-449-7801 (fax)  
ahaspiel@fs.fed.us

3. Identification of problem or opportunity to be addressed

An opportunity to enhance approximately 1000 feet of quality side channel habitat in the Upper Lewis River with large woody material (LWM) exists.

Approximately 160 piece of LWM are being proposed under this project to be used to create 16 structures at strategic locations in the side channel to maximize natural channel characteristics while providing structure stability. Woody Material would come from a nearby timber sale unit which would provide long pieces of wood with attached rootwads.

This side channel is located on private property and is approximately ¼ mile downstream of the Pepper Lewis Side channel.

Rearing habitat for coho has been identified to be limited in the Upper Lewis System.

4. Background

Reconnaissance surveys conducted for this project occurred during July, August September, October and November of 2010. Water flows into the side channel from the river year round, the amount is controlled by a large log jam at the head of the channel, and an outlet to the river is always present, providing easy access into and out of the side channel. The side channel varies between 30 and 20 feet in width, and is well protected by a stable island. In November 1956 Chambers (WDFW) found coho redds in this side channel. This island and side channel have been a stable feature of the Lewis River for over 50 years.

The Lower Columbia Salmon Recovery Plan 2009 Six Year Habitat Work Schedule identifies this as a Tier 1 reach. For coho salmon it has an Overall Preservation rank of 2 of 100, and Overall Restoration rank of 31 of 103, this means it is highly valued and should respond very well to restoration efforts. EDT analyses concludes habitat diversity and side channel habitat is one of the highest concerns in this reach and should respond well to restoration activities. Concerns include high habitat diversity, moderate hatchery fish competition, food availability, and sediment concerns. The ACC Synthesis Matrix rated this section of the river as having medium restoration potential and as a Primary coho population area.
5. Project Objective(s)

GOAL: 
Enhance the quality of fish habitat in the Lewis River by:

♦ Improving habitat complexity and diversity in the side channel using LWM
♦ Providing refugia during winter flows for juvenile salmonids.
♦ Providing increased spawning opportunities for adult salmonids.

This project addresses the following Aquatic Fund priorities.

Priority 1: Benefit fish recovery throughout the North Fork Lewis River, with priority to federal ESA-listed species.
Coho and steelhead trout are listed as a threatened species under the ESA. This project will contribute to the recovery of these species by increasing the amount and quality of rearing pools in side channels. In addition, spawning areas will be associated with the log complexes.
Lower Columbia ESU coho salmon are listed as a threatened species under the ESA
Lower Columbia ESU steelhead trout are listed as a threatened species under the ESA
Lower Columbia ESU Chinook Salmon are listed as a threatened species under the ESA

Priority 2: Support the reintroduction of anadromous fish throughout the basin.
Juvenile anadromous salmonids will have a quality rearing and refugia area when this project is complete, thus ensuring survival and promotion of the various species during reintroduction efforts.

Priority 3: Enhance fish habitat in the Lewis River Basin, with priority given to the North Fork Lewis River.
This project is located in the North Fork Lewis River basin. This project is consists of large woody material placed instream in side channels, designed specifically to enhance and restore fish habitat. This project will increase instream habitat diversity, and in turn it is expected that this project will contribute to increasing fish production in this area.

6. Tasks:

Task 1: NEPA and required permits.
1) Complete NEPA documentation. Field work for this NEPA document would be completed during the summer and fall of 2011. The final document should be crafted and signed by March 2012, and the project would be implemented July 2012.

2) Instream restoration activities are covered within the WDFW-MOU.

Task 2: Project Design.
1) Finalize project design and project preparation details. Preliminary designs have been planned during reconnaissance visits in 2010. We will use a laser level to run a longitudinal profile and collect cross-sectional information as we finalize designs.
2) Secure materials. We will layout a timber sale unit for thinning operations and prepare for harvest operations. Additional material may be acquired from PacifiCorp Swift Reservoir Cleaning operations.

Task 3: Project Implementation

1) Develop contract. A standard RFQ contract will be developed specifying the scope of the project and project requirements. We will use an equipment rental contract to perform the actual work which will allow us the flexibility to make changes to the project as implementation is occurring.

2) Administer contract. A Fish Biologist or Fisheries Technician will administer the contract to ensure contract compliance and project specifications are met.

Task 4: Monitoring

1) Perform baseline monitoring. This monitoring will occur prior to project implementation and include a longitudinal profile, cross-sections, pebble counts, photo-documentation and snorkel surveys. MSHI will provide two interns, ten volunteer youth from the youth stream team, and a supervisor to perform monitoring work. They will perform all aspects of the monitoring with supervision and training from the Forest Service.

2) Perform after project monitoring. This monitoring will occur following project implementation and will continue on an annual basis for several years following project completion. MSHI will provide two interns and ten volunteers for this portion of the work supervised by the Forest Service.

3) Monitoring Report. A monitoring report will be written each year following project implementation. MSHI will provide raw data in excel format, the Forest Service will provide analysis of data and report.

7. Methods:

The Mount St. Helens Fisheries department will oversee all phases of this project including project design, implementation and monitoring.

Approximately 160 piece of large wood material would be harvested during thinning operations from a nearby timber sale unit which would allow us to use long stems (60+ feet) with attached rootwads. Woody material will be trucked down a spur road through private land to a staging area at the confluence of the Muddy River and Lewis River. From there, the wood will be moved to the project site via a skidder and excavator. This project would create and improve rearing opportunities for coho salmon. Wood for this project would primarily come from USFS lands, however if an opportunity exists to acquire large wood from Swift Reservoir cleaning operations, we may pursue that avenue as well.

Approximately 10 to 15 pieces of LWM will be used at each structure location to form complex habitat. Structures will protrude 1/2 to 1/3 of the way into the channel to minimize water shear stress and create a meandering thalweg. Key pieces of wood at each location will be anchored into the streambanks using an excavator to dig trenches up to 30 feet long, and bury the wood. Other pieces of LWM will be interwoven into these key pieces and riparian vegetation.
8. Specific Work Products

Deliverable 1: Completed project.

Deliverable 2: A report describing the project. Report to include project narrative, financial information, staff time to implement the project, and photographs of completed projects.

9. Project Duration

Monitoring for this project would begin during the summer of 2012, Project implementation would occur July 15th 2012 and is expected to take two weeks to complete. As built documents will be completed by December 31st, 2012. An initial report documenting fish response to the structures will be completed by December 31st, 2013. The first monitoring report with pre and post project data will be available December 31, 2013. If funding or LWM supply becomes an issue, project dates would be delayed by one year from above.

A project closeout meeting would occur at an ACC meeting following project completion.

10. Permits

NEPA- Field work will be completed during the summer of 2011, NEPA document will be completed January 2012.

The Gifford Pinchot National Forest has a Memorandum of Agreement with the Washington State Department of Ecology (DOE). The agreement recognizes the Forest Service will ensure that 1) all waters on National Forest lands meet or exceed water quality laws and regulations (Sections 301, 302, 303, 306 and 307) of the Clean Water Act and 2) activities on those lands are consistent with the level of protection of the Washington Administrative Code relevant to state and federal water quality requirements. This agreement is neither a fiscal nor a funds obligation document.

The Gifford Pinchot National Forest has a Memorandum of Understanding (MOU) with the Washington State Department of Fish and Wildlife Regarding Hydraulic Projects conducted by USDA Forest Service Northwest Region (2005). Compliance with the instream restoration provisions within this MOU replaces the need for an individual hydraulic project approval (HPA). This fish habitat enhancement project will be conducted within the provisions set forth in this MOU.

The Clean Water Act (as amended by the Water Quality Act of 1987, Public Law 100-4) authorizes the states to regulate the “fill and removal” activities of Federal agencies. In Washington, the Forest Service has authorization for its fill and removal projects through the MOU with WDFW when the projects comply with the provisions of the MOU.

Land ownership in this section of the Lewis River is comprised of private lands. The project is wholly on private lands, however the access route is through both Forest and private lands. We have received permission from the landowners to use the private spur road to access this project area.

APPENDIX H
MUDDY RIVER SIDE CHANNEL RESTORATION
1. Project Title

Muddy River Side Channel Restoration

2. Project Manager

Adam Haspiel  
Mt. St. Helens National Volcanic Monument  
42218 NE Yale Bridge Road  
Amboy, WA 98604  
360-449-7833  
360-449-7801 (fax)  
ahaspiel@fs.fed.us

3. Identification of problem or opportunity to be addressed

Two side channels on the Muddy River will have large woody material placed in them to enhance and restore juvenile salmonid rearing habitat. Coho salmon will be the main species to benefit from these actions, however steelhead may also use these side channels to escape high winter flows in the mainstem of Muddy River. Approximately 80 pieces of large woody material will be placed in side channel 1 to create approximately 12 log complexes, and 120 pieces will be placed in side channel 2 to create approximately 18 log complexes using a small 16,000lb- 28,000 lb excavator.

The Muddy River was one of the top coho producing stream in the Upper North Fork Lewis River sub-basin prior to dam construction.

4. Background

The Muddy River was probably the top coho producing stream in the Upper North Fork Lewis River sub-basin prior to construction of Merwin, Yale and Swift Dams. In 1957 during the period when the dams were being constructed, Chambers documented the Muddy River as the best coho spawning tributary in the Upper Lewis. Ongoing restoration efforts support the reintroduction of anadromous fish to the basin.

During preliminary design surveys of Side Channel 2 in fall 2010, small landlocked adult coho (12-14 inches) and HPP full size adult coho were found spawning in this side channel.

The Gifford Pinchot National Forest Stream Restoration Plan identifies these as priority projects in the Muddy River Watershed (specific section for the Muddy River is attached as an appendix). The Muddy River Action Plan places high priority on these projects to help salmonid reintroduction efforts. The Lower Columbia Fish Recovery Boards Salmon Recovery Plan specifically cites side channel habitat and stream channel habitat structure as high priority restoration needs. It is rated in the top five stream reaches for restoration work. The top three critical life stages identified in the plan are egg incubation and 0-age active rearing, and, 0-age inactive rearing (overwintering). The ACC Synthesis Matrix rated this section of the river as having medium/high restoration potential and as a Primary coho population area.
5. Project Objective(s)
Goal: Restore and enhance side channel and tributary habitat complexity for reintroduced salmon and steelhead.

Objective. Create 30 rearing/overwintering pools and spawning beds by placing Large Woody Material complexes in side channels.

This project addresses the following ACC priorities:

Priority 1: Benefit fish recovery throughout the North Fork Lewis River, with priority to federal ESA-listed species.
Coho and steelhead trout are listed as a threatened species under the ESA. This project will contribute to the recovery of these species by increasing the amount and quality of rearing pools in side channels. In addition, spawning areas will be associated with the log complexes.

Priority 2: Support the reintroduction of anadromous fish throughout the basin.
By creating rearing and overwintering pools, and spawning gravel in these side channels, this project will provide coho salmon and steelhead trout with keys areas to flourish during reintroduction.

Priority 3: Enhance fish habitat in the Lewis River Basin, with priority given to the North Fork Lewis River.
This project is located in the Muddy River watershed, which is located within the North Fork Lewis River basin. This project is consists of large woody material placed instream in side channels, designed specifically to enhance and restore fish habitat. This project will increase instream habitat diversity, and in turn it is expected that this project will contribute to increasing fish production in this area.

6. Tasks:

Task 1: NEPA and required permits.
1) NEPA for this project was completed in March of 2010.
2) These instream and floodplain restoration activities are covered within the provisions of the WDFW and USFS Memorandum of Understanding.

Task 2: Project Design.
1) Finalize project design and project preparation details. Preliminary designs have been planned during reconnaissance visits in 2010. We will use a laser level to run a longitudinal profile and collect cross-sectional information as we finalize designs.
2) Secure materials. We will layout a timber sale unit for thinning operations and prepare for harvest operations. In addition, material from PacifiCorp Swift Reservoir Cleaning operations has been secured and is stored at the USFS Pine Creek work center.

Task 3: Project Implementation
1) Develop contract. A standard RFQ contract will be developed specifying the scope of the project and project requirements. We will use an equipment rental contract to perform the actual work which will allows us the flexibility to make changes to the project as implementation is occurring.
2) Administer contract. A Fish Biologist and Fisheries Technician will administer the contract to ensure contract compliance and project specifications are met.

Task 4: Monitoring
1) Perform baseline monitoring. This monitoring will occur prior to project implementation and include a longitudinal profile, cross-sections, pebble counts, photo-documentation and snorkel surveys. MSHI will provide two interns, five volunteer youth from the youth stream team and a supervisor to perform monitoring work. They will perform all aspects of the monitoring with supervision and training from the Forest Service.

2) Perform after project monitoring. This monitoring will occur following project implementation and will continue on an annual basis for several years following project completion. MSHI will provide two interns for this portion of the work supervised by the Forest Service.

3) Monitoring Report. A monitoring report will be written each year following project implementation. MSHI will provide raw data in excel format, the Forest Service will provide analysis of data and report.

7. Methods:
The Mt. St. Helens Fisheries department will oversee all phases of this project including project design, implementation and monitoring.

8. Specific Work Products
Deliverable 1: Completed project.

Deliverable 2: A report describing the project. Report to include project narrative, financial information, staff time to implement the project, and photographs of completed projects.

9. Project Duration
Monitoring for this project would begin during the summer of 2012, project implementation would occur July 15th 2012 and is expected to take two weeks to complete. As built documents will be completed by December 31st, 2012. An initial report documenting fish response to the structures will be completed by December 31st, 2013. The first monitoring report with pre and post project data will be available December 31st 2013. If funding or LWM supply becomes an issue, project dates would be delayed by one year from above.

A project closeout meeting would occur at an ACC meeting following project completion.

10. Permits
NEPA for this project was completed March 2010.

The Gifford Pinchot National Forest has a Memorandum of Agreement with the Washington State Department of Ecology (DOE). The agreement recognizes the Forest Service will ensure that 1) all waters on National Forest lands meet or exceed water quality laws and regulations (Sections 301, 302, 303, 306 and 307) of the Clean Water Act and 2) activities on those lands are consistent with the level of protection of the
The Gifford Pinchot National Forest has a Memorandum of Understanding (MOU) with the Washington State Department of Fish and Wildlife Regarding Hydraulic Projects conducted by USDA Forest Service Northwest Region (2005). Compliance with the MOU provisions for instream restoration replaces the need for an individual hydraulic project approval (HPA). This fish habitat enhancement project will be conducted within the provisions set forth in this MOU.

The Clean Water Act (as amended by the Water Quality Act of 1987, Public Law 100-4) authorizes the states to regulate the “fill and removal” activities of Federal agencies. In Washington, the Forest Service has authorization for its fill and removal projects through the MOU with WDFW when the projects comply with the provisions of the MOU.

The project is in compliance with all pertinent sections.
