2019 Integrated Resource Plan (IRP) Public Input Meeting
October 9, 2018
Agenda

• Supply-Side Resource Table Levelized Costs
• Intra-Hour Flexible Resource Credits
• Updated CO₂ Assumption
Supply-Side Resource Table
Levelized Costs
• Representative levelized cost information from the 2017 IRP and for the 2019 IRP both reflect the Tax Cut and Jobs Act.

• Wyoming wind costs from the 2017 IRP reflect updated assumptions applied in the final stages of the portfolio-development process (10.7 percent reduction in capital with a 41.3% capacity relative to the supply-side resource table from the 2017 IRP).

• Wind and solar costs reflect the proposed annual escalation/de-escalation rates summarized later in this presentation.
## Nominal Levelized Costs for Wind, Solar and Storage

<table>
<thead>
<tr>
<th></th>
<th>2017 IRP</th>
<th>2019 IRP</th>
</tr>
</thead>
<tbody>
<tr>
<td>WY Wind</td>
<td>$35</td>
<td>$60</td>
</tr>
<tr>
<td>WY Wind + Battery</td>
<td>$34</td>
<td>$62</td>
</tr>
<tr>
<td>UT Solar PV</td>
<td>$32</td>
<td>$49</td>
</tr>
<tr>
<td>UT Solar PV+Bat</td>
<td>$42</td>
<td>$62</td>
</tr>
</tbody>
</table>

### Notes:
- Representative levelized cost information from the 2017 IRP and for the 2019 IRP both reflect the Tax Cut and Jobs Act.
- Wyoming wind costs from the 2017 IRP reflect updated assumptions applied in the final stages of the portfolio-development process (10.7 percent reduction in capital with a 41.3% capacity relative to the supply-side resource table from the 2017 IRP).
- Wind, solar and battery costs reflect the proposed annual escalation/de-escalation rates summarized later in this presentation.
- Note, the 2017 IRP did not included combined wind and battery or combined solar and battery alternatives.
Nominal Levelized Costs for Natural Gas Resources (2026 COD)

- Representative levelized cost information from the 2017 IRP and for the 2019 IRP both reflect the Tax Cut and Jobs Act and the same base case natural gas prices proposed for the 2019 IRP.

- There are no PTC/ITC phase-out assumptions tied to natural gas resources—2026 is shown for illustrative purposes only.

- Natural gas resource costs reflect the proposed annual escalation/de-escalation rates summarized later in this presentation.

- For levelized cost calculation purposes, it is assumed the CCCT operates at a 78% capacity factor and that the LM6000 and Reciprocating Engine operate at a 33% capacity factor.
Nominal Year-by-Year Escalation for Resource Capital Costs

- Annual capital cost escalation/de-escalation rates for solar are based on unweighted median scenarios from General Electric Renewable Energy, the U.S. Energy Administration, and Burns and MacDonald—note, rates for 2019 and 2020 are adjusted to calibrate levelized costs to be consistent with pricing received in the 2017R RFP.

- Annual capital cost escalation/de-escalation rates for wind are based on unweighted median scenarios from Energy+Environmental Economics, General Electric Renewable Energy, Berkley Labs, ArcTechnica, the Office of Energy Efficiency & Renewable Energy Administration, and Burns and MacDonald—note, rates for 2019 and 2020 are adjusted to calibrate levelized costs consistent with pricing received in the 2017S RFP.

- Annual capital cost escalation/de-escalation rates for batteries are based on data from Burns and MacDonald.

- All other resources are assumed to escalate at 2.28% per year.
Intra-Hour Flexible Resource Credits
Input Variables

- **T-Max** = PacifiCorp’s Hourly Base Schedule
- **FMM Energy Total** = EIM’s Fifteen Minute Advisory Schedule
- **DOT** = EIM’s Five Minute Dispatch Schedule
- **FMM LMP** = EIM’s Fifteen Minute Market Price
- **RTM LMP** = EIM’s Five Minute Market Price
- **Gen Cost** = PacifiCorp’s Cost of Generation
- **IHFRC** = Intra-hour Flexible Resource Credit
- **IHFRC** = \((\text{FMM Energy Total} - \text{T-Max}) \times \text{FMM LMP} + (\text{DOT} - \text{FMM Energy Total}) \times \text{RTM LMP} - (\text{DOT} - \text{T-Max}) \times \text{Gen Cost}\)
EIM Single Unit Example

T-Max: 235.00
FMM Energy Total: 240.00
DOT: 160.00
FMM LMP: $22.09
RTM LMP: $16.40
Gen Cost: $16.81
Calculation

Variables

- **T-Max** = PacifiCorp’s Hourly Base Schedule
- **FMM Energy Total** = EIM’s Fifteen Minute Advisory Schedule
- **DOT** = EIM’s Five Minute Dispatch Schedule
- **FMM LMP** = EIM’s Fifteen Minute Market Price
- **RTM LMP** = EIM’s Five Minute Market Price
- **Gen Cost** = PacifiCorp’s Cost of Generation

Calculation

- \( \text{IHFRC} = \frac{(\text{FMM Energy Total} - \text{T-Max}) \times \text{FMM LMP} + (\text{DOT} - \text{FMM Energy Total}) \times \text{RTM LMP} - (\text{DOT} - \text{T-Max}) \times \text{Gen Cost}}{12} \)
- \( \text{IHFRC} = \frac{(240 \text{ MWh} - 235 \text{ MWh}) \times 22.09 \$/\text{MWh} + (160 \text{ MWh} - 240 \text{ MWh}) \times 16.40 \$/\text{MWh} - (160 \text{ MWh} - 235 \text{ MWh}) \times 16.81 \$/\text{MWh}}{12} \)
- \( \text{IHFRC} = \frac{(5 \text{ MWh}) \times 22.09 \$/\text{MWh} + (-80 \text{ MWh}) \times 16.40 \$/\text{MWh} - (-75 \text{ MWh}) \times 16.81 \$/\text{MWh}}{12} \)
- \( \text{IHFRC} = \frac{($110.45 - $1312.00 + $1260.75)}{12} \)
- \( \text{IHFRC} = $59.20/12 \)
- \( \text{IHFRC} = $4.93/5 \text{ min} \)

1. Market price received for being available to ramp up in FMM
2. Market price paid for ramping down in RTM
3. Fuel costs saved from reduced dispatch versus base schedule
## Supply-Side Resource Values

*Resources are dispatched up and down from base schedule in EIM.*
Updated CO$_2$ Assumption
Survey of CO$_2$ Price Forecasts
CO$_2$ Price Forecasts
Additional Information and Next Steps
Draft Topics for Upcoming PIMs*

November 1-2, 2018 PIM*:
  • Coal Studies
  • Stakeholder Feedback Form Recap

December 3-4, 2018 PIM*:
  • Load & Resource Balance
  • Regional Haze Portfolios
  • Portfolios / Sensitivity Cases
  • Stakeholder Feedback Form Recap

* Topics and timing are tentative and subject to change
