

Ben Lomond to Gentile Street

transmission line project

Rocky Mountain Power is always working to provide safe, reliable and efficient electrical service to our customers. As part of this commitment, we're planning a new transmission project to improve electric service reliability and operational flexibility in the area.

Project purpose and need

Energy use is on the rise in western Weber and Davis counties, as it is in most of the West. Many new homes and commercial developments have been built here, and more are on the way. Existing homes and businesses also have a greater need for electricity. With demand growing, our system serving the two counties will reach full capacity in 2010.

The new transmission line and substations being planned will add necessary capacity, improving the reliability of your electric service and supporting the area's economic growth. Everyone in the community benefits.

About the project

Rocky Mountain Power plans to build a project in western Weber and Davis counties, Utah, consisting of:

- A new 20-mile transmission line that will be connected to existing lines in Layton City near Gentile Street, then run north to 700 North and 6700 West in unincorporated Weber County.
- Five new substations along the proposed route that will deliver electricity and boost reliability to the communities in western Davis and Weber counties.

Project description and phasing

Phase I

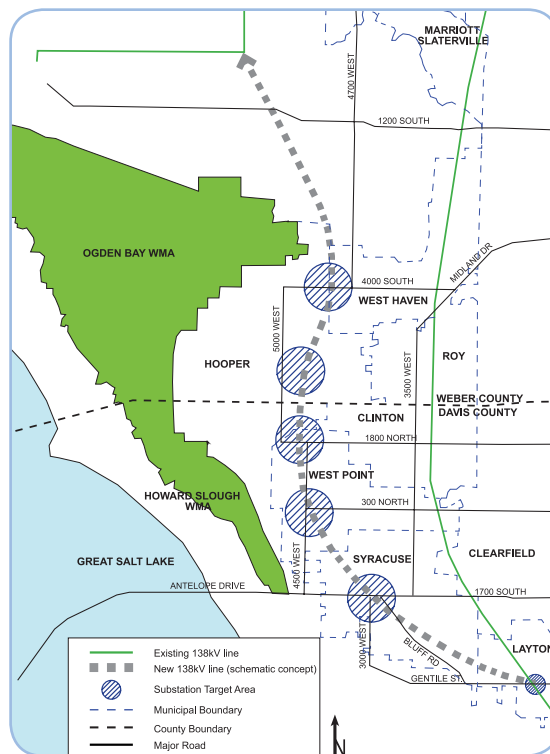

- A new substation will be constructed in West Point City.
- A new 7-mile transmission line will be constructed from Layton City near Gentile Street to the new substation in West Point City.

Phase II

- A new 13-mile transmission line will be constructed from the West Point substation going north to approximately 700 North and 6700 West in unincorporated Weber County. There, it will connect to the transmission line coming out of the Ben Lomond substation.
- Four new substations will be constructed along this transmission line.

Project Schedule

Rocky Mountain Power is now meeting with local officials, agencies and others to present the project and

Rocky Mountain Power is planning to add a transmission line and substations to better serve the growing needs of our customers. This map shows the proposed transmission project area.

gather local input and information. Necessary permit applications will then be prepared and submitted for approval. Once the permitting process is completed and approvals are obtained, construction of the project will begin.

March – September 2008

- Stakeholder/Agency briefings
- Public meetings and input

September – November 2008

- Permitting of Phase I

September 2009 – May 2010

- Construction of Phase I

June 2010

- Phase I in service

2011 – 2014

- Permitting and construction of Phase II
