

HUNTER PLANT - 2 Miles South of Castle Dale on Highway 10 -- P.O. Box 569 -- Castle Dale, Utah 84513

February 28, 2023

To: Ms. Dana Truman  
Field Manager, Bureau of Land Management  
600 West 125 South  
Price, Utah 84501

**Subject: Notification of Potential Presence of CCR Constituents**

Dear Ms. Dana Truman,

This letter serves as an official notification<sup>1</sup> and provides a follow-up to our phone call on February 27, 2023, during which PacifiCorp informed the Bureau of Land Management (BLM) of the potential that certain Coal Combustion Residual (CCR) constituents (CCR Rule Appendix IV constituents) may exist in groundwater on BLM's property located immediately east of PacifiCorp's Hunter Power Plant near Castle Dale, Utah. As discussed on our call, and as required by the CCR Rule, PacifiCorp has been monitoring impacted groundwater on PacifiCorp property at the Hunter Plant. Monitoring has been performed by a network of groundwater wells.

The groundwater sampling and analysis, from the wells, has shown statistically significant levels of a CCR constituent, lithium, at the property boundary shared by PacifiCorp and BLM. Given sub-surface characteristics and hydrologic system configurations in the area, it is possible the constituent could have migrated into the sub-surface of BLM's property. Pursuant to the CCR Rule, PacifiCorp is actively engaged in evaluation, correction, cleanup, and remediation of impacted groundwater. As part of our compliance with CCR Rule requirements, PacifiCorp will also post this notification letter on PacifiCorp's CCR website<sup>2</sup> and place it in the Hunter's facility operating record. I look forward to our ongoing collaboration on this matter. Please contact me if you have any questions.

Cordially,

Laren Huntsman

Managing Director, Hunter and Huntington Power Plants
