

# ERRATA

## KLAMATH RIVER BASELINE WATER QUALITY SAMPLING – 2014 ANNUAL REPORT –

Prepared for the KHSA Water Quality Monitoring Group

Prepared by  
Watercourse Engineering, Inc.  
January 11, 2018

## Errata

In 2017 PacifiCorp completed a comprehensive quality control data review process for the data collected under Interim Measure 15. Several corrections were made to the 2014 dataset which required the following changes be made to the Klamath River Baseline Water Quality Sampling 2014 Annual Report. Tables and figures in this errata sheet replace tables and figures with the corresponding number (e.g., Errata Figure 4 replaces report Figure 4). Completely new tables and figures are given a new number that would place them in the correct location within the original report (e.g., Errata Figure 3-a would follow report Figure 3). Any changes to the text are referenced to page and paragraph and indicated in ~~strikeout~~ (old text) and underline (new text).

1. Public health data collected in 2014 has been added to the data files associated with this report, but was not added to, analyzed, or presented within the annual report itself. The entire Interim Measure 15 data set is available at:  
<http://www.pacificorp.com/es/hydro/hl/kr.html>.

2. Project sites were standardized (Errata Table 1-a).

**Errata Table 1-a. Original 2014 Site IDs and Names and the corresponding Standardized Site IDs and Names.**

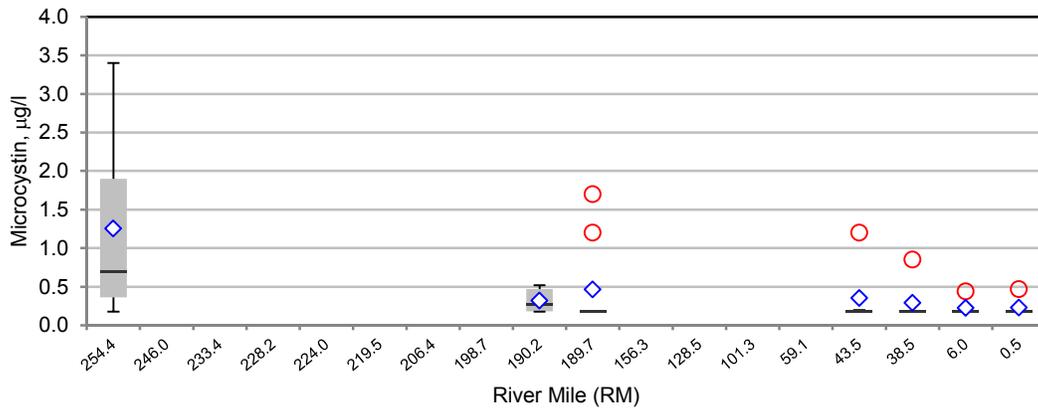

Old Site ID and Name		Corresponding Standardized Site ID and Name	
KR2544	Link Dam (RM - 254.4)	KR25444	Link Dam (RM 254.44; Baseline)
KR2460	Keno Reservoir at Miller Island (RM - 246.0)	KR24600	Keno Reservoir at Miller Island (RM 246.0; Baseline)
KR2330	KR below Keno Dam (RM -233.4)	KR23340	Klamath River below Keno Dam near a USGS gage (RM 233.4; Baseline)
KR2282	KR above J.C. Boyle Reservoir (RM-228.2)	KR22822	Klamath River above J.C. Boyle Reservoir (RM 228.22; Baseline)
KR2260	J.C. Boyle Reservoir (RM-226.0)a	KR22478	J.C. Boyle Reservoir (RM 224.78; Baseline)
KR2240	KR below J.C. Boyle Dam (RM-224.0)	KR22460	Klamath River below J.C. Boyle Dam (RM 224.60; Baseline)
KR2195	KR below USGS Gage (RM-219.5)	KR21950	Klamath River below USGS Gage (RM 219.50; Baseline)
KR2064	KR near Stateline (RM-206.4)	KR20642	Klamath River above Shovel Creek (RM 206.42; Baseline)
KR1990	Copco Reservoir (RM-199.0)b	KR19874	Copco Reservoir (RM 198.74; Baseline)
KR1950	KR below Copco Dam (RM-195.0)	KR19645	Klamath River below Copco Dam (RM 196.45; Baseline)
KR1920	Iron Gate Reservoir (RM-192.0)c	KR19019	Iron Gate Reservoir (RM 190.19; Baseline)
KR1897	KR below Iron Gate Dam (RM-189.7)	KR18973	Klamath River below Iron Gate Dam (RM 189.73; Baseline)
KR1560	KR at Walker Bridge (RM- 156.0)	KR15626	Klamath River at Walker Bridge (RM 156.26; Baseline)
KR1285	KR below Seiad (RM - 128.5)	KR12850	Klamath River below Seiad (RM 128.5; Baseline)
KR1006	KR near Happy Camp (RM-106.0)	KR10130	Klamath River below Happy Camp (RM 101.3; Baseline)
KR0591	KR at Orleans (USGS) (RM-59.1)	KR05910	Klamath River at Orleans (USGS) (RM 59.1; Baseline)
KR0435	KR at Weitchpec (RM-43.5)	KR04350	Klamath River at Weitchpec (RM 43.5; Baseline)
KR0385	KR below Trinity River (RM-38.5)	KR03850	Klamath River below Trinity River (RM 38.5; Baseline)
KR0060	KR near Klamath (RM-6.0)	KR00600	Klamath River near Klamath (RM 6.0; Baseline)
KR0005	KR Estuary (RM-0.5)d	KR00050	Klamath River Estuary (RM 0.5; Baseline)
SHR00	Shasta River near mouth	SH00000	Shasta River near mouth (Baseline)
SCR00	Scott River near mouth	SC00000	Scott River near mouth (Baseline)
SAR00	Salmon River near mouth	SA00000	Salmon River near mouth (Baseline)
TRR00	Trinity River near mouth	TR00000	Trinity River near mouth (Baseline)

3. The original methods, MDLs and RLs listed in Table 2 did not present information for all constituents of interest in 2014, nor was the variability of the MDLs and RLs presented. The methods as well as the MDL and RL variation in 2014 are presented in Errata Table 2.

**Errata Table 2. 2014 Laboratory methods, method detection limits (MDLs) and reporting limits (RLs). “na” indicates no limit available for a method.**

Toxins, Microcystin	MYCN	-	-	-	-	-	-	-	-	-	ELISA	0.15	0.18

4. Because of the small sample size at each site during 2014, the boxplots presented in the annual report and this errata sheet may not be statistically robust and are included for illustration purposes only. For errata boxplot figures, sites with less than six points of data are no longer presented and the errata figure captions indicate those locations.
5. Erroneous microcystin data was removed from the dataset; to reflect these changes, the mainstem microcystin boxplot in Figure 8 was revised and is presented below in Errata Figure 8.

**Errata Figure 8. Microcystin from Link River to the Klamath River Estuary with median (—), mean (◊), outliers (\*), and extreme outliers (◊) identified (February 2014 – December 2014). Note: Miller Island at Keno Reservoir (RM 246), Copco Reservoir (RM 199), and Iron Gate Reservoir (RM 192). River mile on x-axis not to scale. Note: No microcystin boxplots are included for River Mile 246.0, 233.4, 228.2, 224.0, 219.5, 206.4, 198.7, 156.3, 128.5, 101.3 and 59.1 because there were fewer than six data points at each of these sites.**

6. Erroneous microcystin data was removed from the dataset and missing microcystin data was added; to reflect these changes, the microcystin and USGS flow graph in Figure 17 was revised and is presented below in Errata Figure 17.

**Errata Figure 17. Microcystin (MCYN) and daily flow at USGS flow gage locations for the mainstem Klamath and Link Rivers. Only surface samples are taken in consideration. Non-detect values are presented as zeros. Note the scale change for the secondary y-axis at Orleans and Klamath.**

7. The Appendix B 2014 KHSA dataset has been revised since the original 2014 Annual Report was completed. The revised dataset is presented in the table below in Errata Table B-1.

**Errata Table B-1. 2014 KHSA dataset.**

Table D-10. Results for paired laboratory comparisons: October 8, 2014. ....	D-18
Table D-11. Summary of cross comparisons for each constituent. Comparisons include: 71 similar pairs, 14 dissimilar pairs, 17 censored pairs, 6 non-applicable pairs. ....	D-19

## Introduction

On November 13, 2008, the United States, the states of California and Oregon, and PacifiCorp executed an Agreement in Principle (AIP) describing a framework for possible removal of PacifiCorp's dams on the Klamath River. Interim Measure 12 of the AIP stipulated a water quality monitoring program, including on-going monitoring of blue-green algae (cyanobacteria) and associated toxins. The Klamath Hydroelectric Settlement Agreement (KHSA), signed on February 18, 2010, supersedes the AIP. Interim Measure 15 (IM 15) - Water Quality Monitoring states that PacifiCorp shall fund (\$500,000 per year) long-term baseline water quality monitoring to support water quality improvement activities, dam removal studies, permitting studies, and form a long-term record to assess trends and other potential changes in the basin. This includes funding for blue-green algae (BGA) and BGA toxin monitoring, as necessary to protect public health. The monitoring is performed by an entity or entities agreed upon by the parties to the KHSA and in consultation with the appropriate water quality agencies. The 2014 water quality monitoring was conducted under IM 15 and represents the fourth year of water quality monitoring under the KHSA.

The monitoring program is a cooperative effort of the KHSA Monitoring Group<sup>1</sup>. This group developed the KHSA IM15 monitoring study plan that is located on PacifiCorp's Klamath website<sup>2</sup>, as well as the Klamath Basin Monitoring Program (KBMP) website<sup>3</sup>. Actual monitoring is completed by a sub-set of the group that includes the Yurok Tribe, Karuk Tribe, PacifiCorp, and the U.S. Bureau of Reclamation (USBR). The program continues to collect data from 254 miles of river and reservoirs from Link Dam near Klamath Falls in Oregon to the Klamath River Estuary in California. Annual planning and coordination meetings include the IM 15 Monitoring Group and interested stakeholders. The IM 15 Monitoring Group ensures that the intent of IM 15 is met, appropriate quality assurance protocols and standard operating procedures are in place, water quality conditions and sampling matters are tracked in a timely fashion, and the process is transparent.

This report summarizes the results from the 2014 grab sampling data collection and available water quality probe data. Four appendices accompany this report: the sampling locations (Appendix A); the 2014 baseline grab sample results (Appendix B); the phytoplankton species charts and biovolume graphs (Appendix C); and the 2014 inter-laboratory comparison tech memo (Appendix D).

---

<sup>1</sup> The KHSA Monitoring Group consists of representatives from the North Coast Regional Water Quality Control Board; Oregon Department of Environmental Quality; U.S. Environmental Protection Agency, Region IX; Karuk Tribe; Yurok Tribe; PacifiCorp; and U.S. Bureau of Reclamation.

## **Program Elements**

The primary elements of the IM 15 monitoring program include baseline and public health monitoring. The baseline water quality monitoring element includes water quality grab samples, physical observations associated with these grab samples, water quality probe and algae species data. The water quality probes recorded observations at hourly or sub-hourly intervals. Parameters sampled by probes included water temperature, dissolved oxygen, specific conductivity, and pH at specific locations in the Klamath River (Table 1). The grab samples are collected for analytical determination for a suite of water quality constituents (Section 1.1). The algae data in the baseline monitoring element includes algae species identification and quantification samples collected at each sampling location. The grab sample and water quality probe data and algae species quantification are presented in this report, and are available in electronic form. Monitoring was carried out from February through December.

The public health monitoring program data consists of algae species at specific sites within reservoirs and river reaches and focuses on algae species and algal toxin sampling. These results are not discussed herein, but rather are reported separately as a compilation of summary reports presented through the season. These reports were used to track phytoplankton and toxin conditions that supported management decisions to post and de-post reservoir and river reaches with public health advisory information.

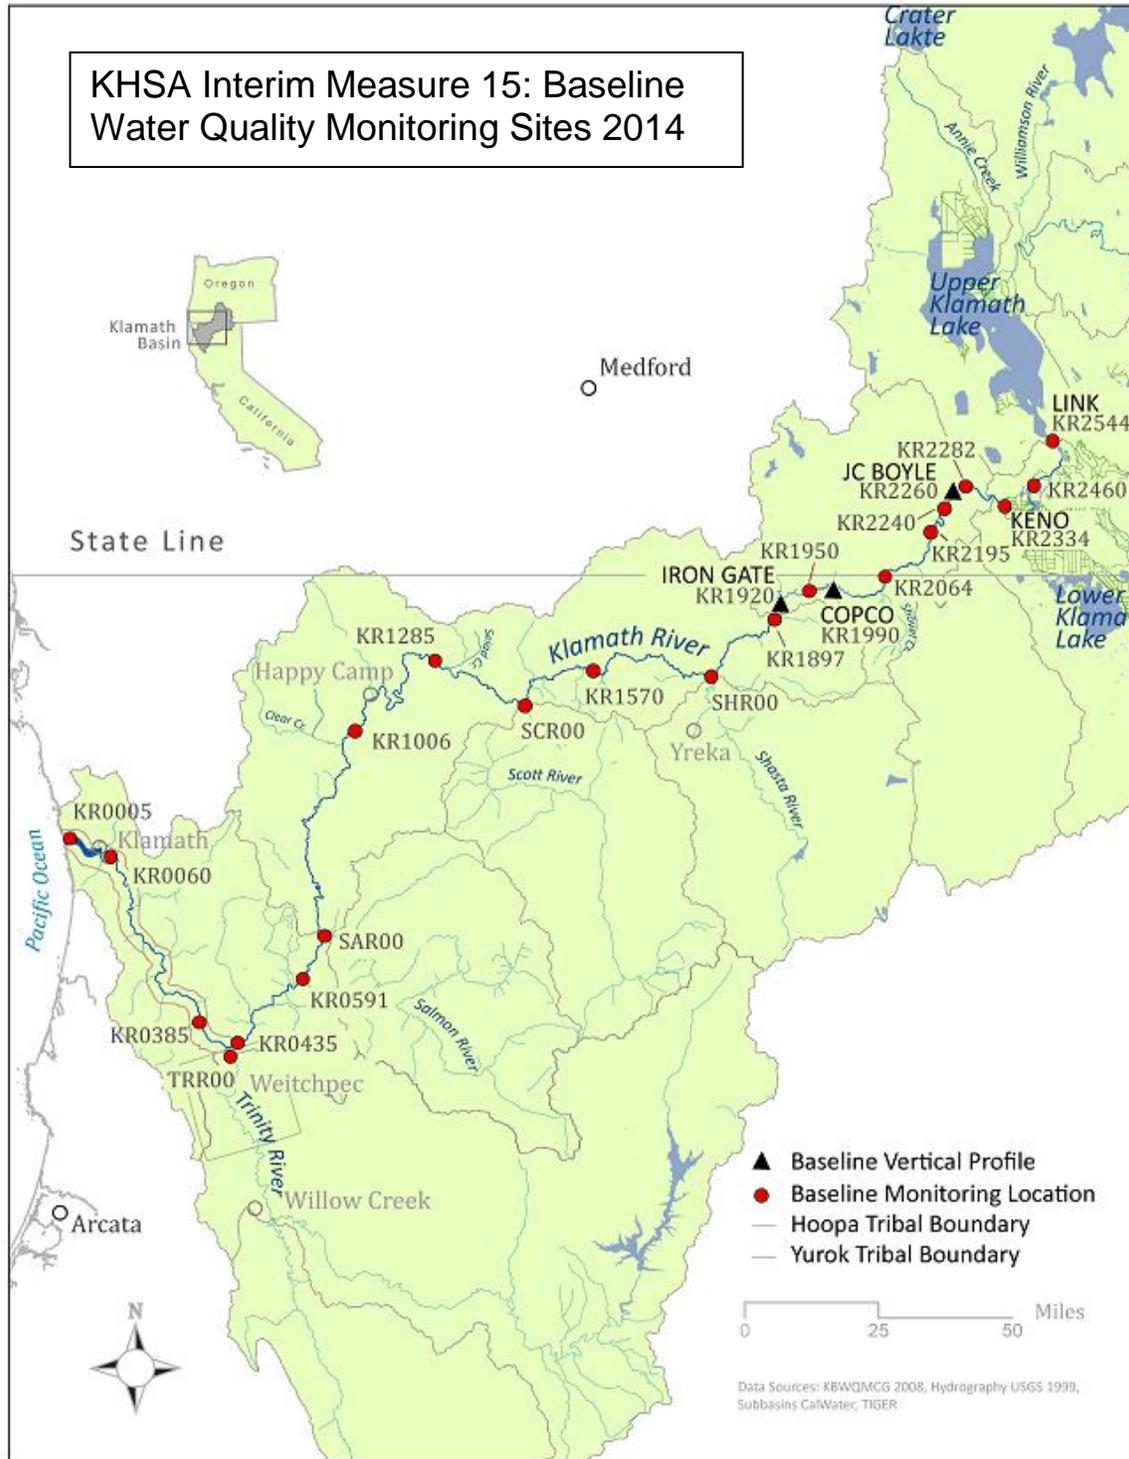

KBMP has developed a database to store information collected under the IM 15 program, including the baseline monitoring and the public health monitoring elements. These data are accessible via the KBMP website. In addition, the KBMP website includes links to previous reports and other, associated program documents, and other materials and features that provide transparency to the KBMP process that are directly transferable to the IM 15 monitoring program. There are other Klamath River monitoring efforts outside of the IM 15 program that are sponsored by individual entities, including entities that participate in the IM 15 program. However, only data collected under the IM 15 are included herein.

## Baseline Program Water Quality Sampling

In 2014, sampling was conducted at twenty-four sites along the Klamath River and its tributaries, from Link Dam to the Klamath River Estuary (Figure 1), by the four sampling entities: U.S. Bureau of Reclamation (USBR), PacifiCorp, Karuk Tribe, and Yurok Tribe. Sixteen of those sites were located on the mainstem of the Klamath River, four sites were located in the reservoirs on the Klamath River, and four sites were located on the major tributaries of the Klamath River (Shasta, Scott, Salmon and Trinity River). Sampling locations, sampling frequency and sampling entity are presented in Table 1.

Discrete physical parameters (water temperature, dissolved oxygen, specific conductivity, and pH) were collected at all sites when grab samples were collected during the sampling year. Continuous water quality parameters were collected at six sites: Link Dam (RM 254.4), Klamath River above Keno Dam (RM 234.9), Klamath River below Iron Gate Dam (RM 189.7), Klamath River at Seiad Valley (RM 128.5), Klamath River at Weitchpec (RM 043.5), and Klamath River above Turwar (RM 008.0). Grab samples of all other baseline water quality constituents were collected monthly. Exceptions include: (a) at Link Dam and Klamath River below Iron Gate Dam, where samples were collected bi-monthly from May through October and monthly for the remainder of the sampling season, and (b) Klamath River below Keno and Klamath River at Stateline, where samples were collected bi-monthly from June through September and monthly for the remainder of the sampling season. Please refer to Table 1 for the frequencies at each sampling location.

The following constituents were analyzed: inorganic nitrogen (total nitrogen, nitrate+nitrite, and ammonia), particulate nitrogen, particulate phosphorus, particulate inorganic phosphorus, inorganic phosphorus (total phosphorus and orthophosphate), particulate carbon, dissolved organic carbon, total and volatile suspended solids, carbonaceous biological oxygen demand, turbidity, chlorophyll-a, pheophytin, and microcystin. Phytoplankton species samples were also collected. Not all parameters were collected at every site; please refer to Table 1 for the parameters analyzed at each sampling location. Data results from the 2014 baseline grab samples are presented in Appendix B.

**Notes:**

<sup>a</sup> Sampling at one depth in J.C. Boyle reservoir (0.5 m depth = surface)

<sup>b</sup> Sampling at three depths in Copco reservoir (0.5 m below surface, one intermediate depth, and 0.5 m above bottom)

<sup>c</sup> Sampling at three depths in Iron Gate reservoir (0.5 m below surface, one intermediate depths, and 0.5 m above bottom)

<sup>d</sup> Hourly measurements at four locations (two in lower estuary, one in mid-estuary, and one in upper estuary) at two depths (0.5 m below surface and 0.5 m above bottom)

**Key:**

**Sampling Method**

**T** – Thermistor

**P** – Probe or data sonde

**G** – Grab sample

**Sampling Frequency Codes**

**VP** – vertical profile at stated sampling frequency

**H** – hourly measurements by sondes (in some instances sub-hourly data may be desired)

**D** – Discrete sample

**HP** - Hourly measurements in a profile

**M** – monthly sampling, excluding January

**M/S** – monthly sampling, seasonally from May through October

**M/BM** – Bi-monthly sampling May - October and monthly sampling the remainder of the year

**M2/BM2** – Bi-monthly sampling June-September and monthly the remainder of the year

**M-** = Monthly Sampling with exception of December, January and February

**M2/BM2\*\*** – Bi-monthly sampling June-September and monthly the remainder of the year and consider adding May and October to go to M/BM

**BM/S** –Bimonthly sampling July-Oct

**S2** – monthly sampling July - Oct

\* - Not sampled This parameter is covered M/S by Tribal WQ Workgroup

# 1. Water Quality Sample Collection

Water samples included both water quality probe data (temperature, dissolved oxygen, specific conductivity, and pH) and grab samples. Grab samples (i.e., physical and chemical constituents listed in Table 1) were sent to respective laboratories for analysis. For turbidity, USBR used the HACH 2100P Turbidimeter for measurements rather than collecting grab samples.

## 1.1. Analytical Samples

Grab water samples were collected for analytical determination of:

- Nitrogen: ammonia (NH<sub>4</sub>), nitrate+nitrite (NO<sub>3</sub>+NO<sub>2</sub>), total nitrogen (TN), particulate nitrogen (PN), particulate phosphorus (PP), and particulate inorganic phosphorus (PIP),
- Phosphorus: orthophosphate (OPO<sub>4</sub>) and total phosphorus (TP),
- Carbon: dissolved organic carbon (DOC) and particulate carbon (PC),
- Solids: total suspended solids (TSS) and volatile suspended solids (VSS),
- Carbonaceous biological oxygen demand (CBOD),
- Alkalinity (ALKT),
- Turbidity (TURB),
- Phytoplankton (algae): chlorophyll-a and pheophytin,
- Microcystin (MCYN).

Six laboratories completed the analytical work during the field season:

- CH2MHill Applied Sciences Laboratory (CH2MHill) in Corvallis, Oregon.
  - <http://www.ch2m.com/corporate/services/asl/default.asp>
- IEH Aquatic Research (ARI) in Seattle, Washington.
  - <http://www.iehinc.com/ieh-locations/>
- Chesapeake Biological Laboratories (CBL) in Solomons, Maryland.
  - <http://www.umces.edu/cbl>
- EPA Region 9 (EPA) laboratory in Richmond, California.
  - <http://www.epa.gov/region9/lab/>
- California Department of Fish and Game Water Pollution Control (DFG) Laboratory in Rancho Cordova, California.
  - <https://www.wildlife.ca.gov/>
- Aquatic Analysts in Friday Harbor, Washington.
  - (no public website)

## **1.2. Physical Measurements**

Water temperature, pH, specific conductivity, and dissolved oxygen were measured at all sampling sites. In some cases, sampling entities collected additional information (e.g., turbidity) during field visits to meet multiple objectives. Physical measurements were recorded at each site using either thermistors, or water quality probes that were maintained and calibrated by each sampling entity. In addition to the vertical profiles in reservoirs and continuous time series monitoring (Table 1), physical water quality parameters were measured when grab samples were collected. Physical measurements that were collected during grab sampling are included in the field data (Appendix B) while time series monitoring data are maintained by (and available from) each sampling entity.

## **1.3. Quality Assurance**

Program samples were collected under individual entity Quality Assurance Project Plans, Standard Operating Procedures, and/or Sampling Analysis Plans (Karuk 2009, PacifiCorp 2008, USBR 2009, and Yurok 2008). These methods have been compared and reviewed by the KHSA Working Group to ensure consistent sampling techniques are applied (KHSA-WG 2010).

## **1.4. Laboratory Comparison**

Since 2009, data are collected in triplicate samples at least three times throughout the field season for laboratory comparison as part of the sampling protocol.

In 2009 and 2010, the sampling location was at Link Dam, and in 2011 the sampling location was changed to the Klamath River Estuary to capture the potential range of nutrient concentrations found in the IM15 sampling area. In 2012, the sampling location was changed to the Klamath River near Weitchpec because the concentrations of several constituents were too low to be detected in the Klamath River Estuary (i.e., below the method detection limit). Sampling entities agreed to move the laboratory comparison location every two years to capture nutrient variability. In 2013, the sampling location was the Klamath River below Seiad Valley.

Because analyses of samples collected by USBR are now analyzed by CH2MHill, Basic Laboratory will no longer be considered for the laboratory comparison. Furthermore, IM15 entities decided to add an additional field sampling event. In 2014, duplicate samples were collected on four days (July 9<sup>th</sup>, August 6<sup>th</sup>, September 24<sup>th</sup>, and October 8<sup>th</sup>) and submitted for analysis at two laboratories: Aquatic Research, Inc and CH2MHill Applied Sciences Laboratory. IM15 entities also decided to drop constituents that were consistent (e.g.,  $R^2$  values greater than 0.9) among laboratories or challenging to analyze due to low field concentrations. Constituents that were dropped in 2014 include: alkalinity, nitrite+nitrate, ammonia, and five-day carbonaceous biological oxygen demand (CBOD5). Other details of the field sampling plan for the laboratory comparison are detailed in the technical memorandum (Appendix D).

## **1.5. Water Quality Analytical Methods**

CH2MHill, Aquatic Research, and Chesapeake Biological Laboratories used either Standard Methods or EPA analytical methods for analysis of nutrients, dissolved and particulate carbon, alkalinity, carbonaceous biological oxygen demand, total suspended solids and volatile suspended solids, and chlorophyll-a (Table 2). Method detection limits (MDL) and reporting limits (RL) varied among the laboratories.

For dissolved organic carbon (DOC) samples collected in November and December, CH2MHill sent dissolved samples to other laboratories for analysis due to equipment maintenance, and thus an inability to process these in-house. Specifically, on December 1, 2014, the Shimadzu Total Organic Carbon analyzer was out of operation until CH2MHill purchased a new machine which was operational on January 27, 2015.

Therefore, two laboratories were used to analyze for DOC: TestAmerica Laboratories, Inc (TLI) in Beaverton, Oregon; and Neilson Research Corporation (NRC) in Medford, Oregon. For PacifiCorp, DOC samples were sent to TLI. For USBR, DOC samples collected in November were sent to TLI and DOC samples collected in December were sent to NRC because NRC's turnaround time was shorter than TLI (pers. comm. K. McKinley).

### **1.5.1. Algae Samples**

Analysis of chlorophyll-a and pheophytin was performed by three of the aforementioned laboratories. Algae samples collected by USBR, PacifiCorp, Karuk Tribe, and Yurok Tribe were sent to Aquatic Analysts in Friday Harbor, Washington.

Microcystin analysis was performed using the Enzyme-Linked ImmunoSorbent Assay (ELISA) method at the EPA laboratory. Additional microcystin analysis was completed by the California Department of Fish and Wildlife laboratory using liquid chromatography-tandem mass spectrometry (LCMS/MS) for selected locations.

## 2. Baseline Program Water Quality Data

Water quality samples for the 2014 IM15 baseline water quality monitoring program were collected from February through December. Sampling crews from the various entities collected samples within a few days of each other. Sampling on the same day throughout the basin was infeasible due to other obligations, shipping constraints, travel considerations, and other factors. In most cases all twenty-four sites were sampled each month. There were periods when one or more sites were omitted or one or more constituents were not sampled. The data is summarized in the appendices.

### 2.1. Data Summary

Physical measurements collected included water temperature, pH, specific conductivity, and dissolved oxygen. Chemical and biological water quality measurements include two types of algae related estimates (chlorophyll-a and pheophytin), alkalinity, two forms of carbon (dissolved organic and particulate), carbonaceous biological oxygen demand, four forms of nitrogen (ammonia, nitrate+nitrite, total nitrogen, and particulate nitrogen), two forms of phosphorus (orthophosphate and total phosphorus), total suspended solids, and volatile suspended solids, and microcystin.

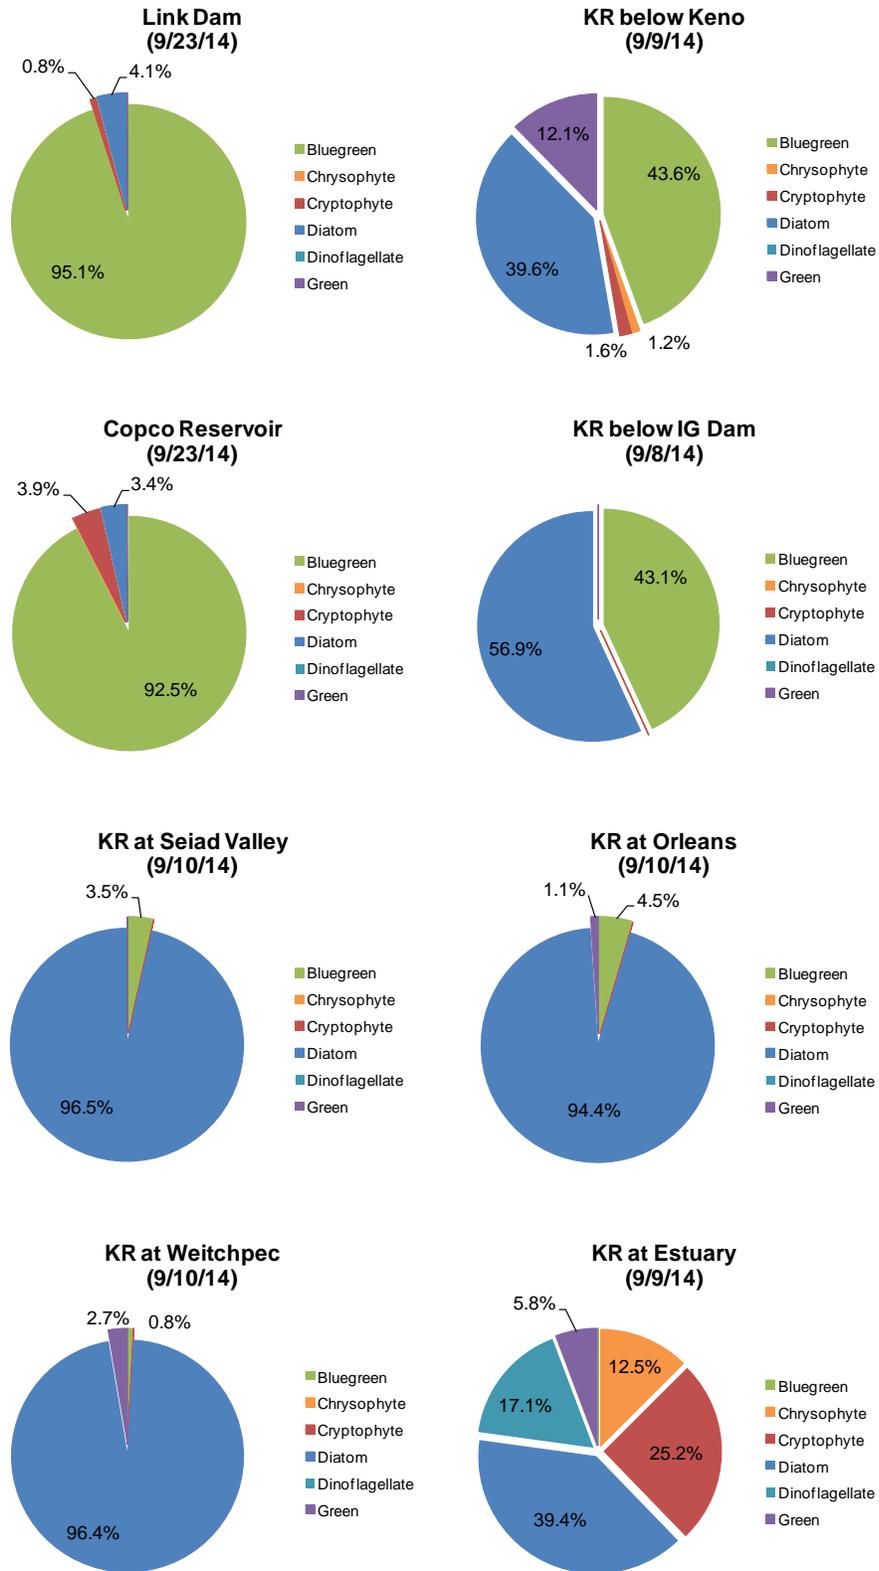

Data are summarized herein to illustrate general spatial and temporal patterns during the 2014 sampling period. Data are presented in three formats: (1) longitudinal boxplots<sup>4</sup> based on seasonal grab sample data, (2) physical water quality sonde data (hourly) at specific locations, and (3) charts and bar graphs representing the types of algae and respective biovolumes at the sampling locations. The first two formats are presented in the main report; the third format is presented in Appendix C. The mainstem sites and major tributaries (Shasta, Scott, Salmon, and Trinity Rivers) are graphed separately. Constituents presented include: dissolved oxygen, dissolved organic carbon, total nitrogen, total phosphorus, and microcystin.

Time series data are presented for individual constituents at locations on the Klamath River for which there are United States Geological (USGS) flow gages<sup>5</sup> (Table 3). While algae data are available for the May to October period, herein September percent biovolume are presented for illustration for eight locations: (1) Link River, (2) Klamath River below Keno Dam, (3) Copco Reservoir near Copco Dam, (4) Hatchery Bridge, (5) Klamath River near Seiad Valley, (6) Klamath River near Orleans, (7) Klamath River at Weitchpec, and (8) Klamath River Estuary (Figure 2). Plots representing algae species for other months are presented in Appendix C.

---

<sup>4</sup> A box-and-whisker plot is a graphical way of presenting statistical parameters including median, mean, lower and upper quartiles, and outliers. The median value is represented by a horizontal line; a box (gray) is formed by the 25<sup>th</sup> quartile and 75<sup>th</sup> quartile and represents the inter-quartile range (IQR); the whiskers extend beyond the 1.5\*IQR above and below the quartiles; and points beyond the whiskers are termed outliers. Outliers are values between 1.5 to 3 times the IQR. Extreme outliers are values greater than 3 times the IQR.

<sup>5</sup> <http://water.usgs.gov/>

**Figure 2. Phytoplankton species percent biovolume for the eight locations in the Klamath River: September 2014.**

**Table 3. United States Geological Survey (USGS) flow gage locations for time series data. River mile and gage number presented.**

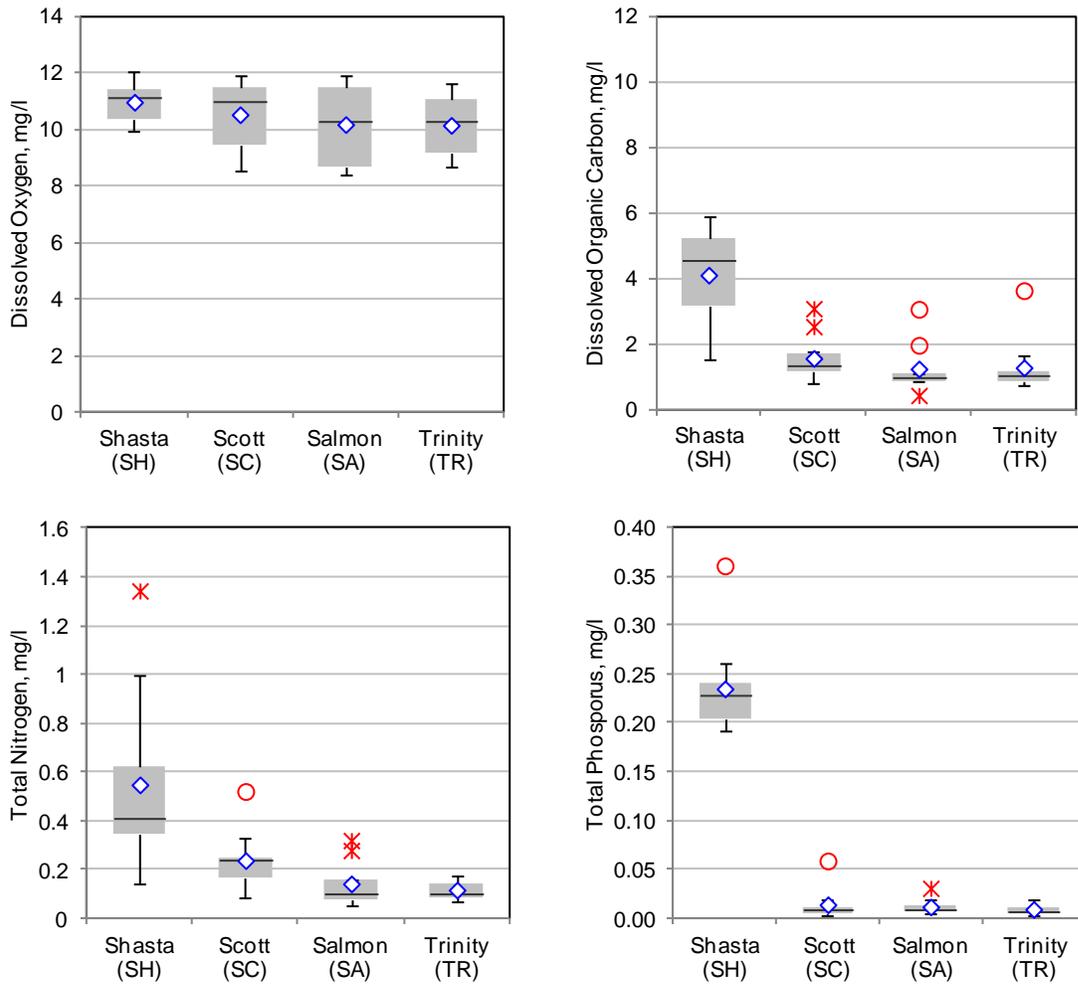

Location	River Mile (RM) ( <i>approximate</i> )	USGS Gage Number
Link River at Klamath Falls, OR	254	11507500
Klamath River at Keno, OR	232	11509500
Klamath River below Iron Gate Dam, CA	190	11516530
Klamath River near Seiad Valley, CA	129	11520500
Klamath River at Orleans, CA	59	11523000
Klamath River near Klamath, CA	8	11530500

Grab sample data and the associated physical water quality measurements (e.g., water temperature and dissolved oxygen) are presented in the figures listed in Table 4. These illustrations are not intended to be comprehensive, but rather to present general conditions throughout the Klamath River during the sampling season. The complete data set is available on the KBMP website (<http://www.kbmp.net/>). The laboratory comparison technical memorandum is presented in Appendix D.

### **3. Summary**

The KHSA IM15 baseline water quality sampling program is an interagency cooperative effort to characterize water quality conditions in the Klamath Basin in support of ongoing and future measures pertaining to restoration, dam removal studies, public health, and other factors. The program was successfully implemented in 2010 and has been on-going. Quality assurance measures have been incorporated into the process and final data sets are available to all interested parties (<http://kbmp.net/>). Planning and monitoring effort has laid the groundwork for continued cooperation and quality data collection in the Klamath River basin. The 2014 KHSA Interim Measure 15 Monitoring Plan is available on the KBMP website.

Non-detect values were replaced with "-".  
PacifiCorp and USBR values below the reporting limit (RL) but above the method detection limit (MDL) are j-flagged and italicized.  
Karuk Tribe and Yurok Tribe values below the MDL are presented as "<" and the MDL value.  
DNS = did not sample.  
DNP = laboratory did not process.  
WSE = low water surface elevation (did not sample/measure).

Re: 2014 Interim Measure 15 Inter-laboratory Comparison Memo

### Introduction

Four laboratory cross comparisons sampling events occurred during the 2014 Klamath Hydroelectric Settlement Agreement (KHSA) Interim Measure 15 (IM 15) baseline monitoring program to provide insight into laboratory performance at the principal laboratories employed. Location of the sampling event has changed every two years since program inception, including: Link Dam near Klamath Falls (RM 254.4), Klamath River near the Estuary (RM 0.5) and Klamath River near Weitchpec (RM 43.5), and Klamath River below Seiad Valley (RM 128.5).

On March 31, 2014 several entities involved in the IM 15 baseline monitoring program held a meeting to discuss the progress of the inter-laboratory (henceforth, interlab) cross comparisons. From the meeting, several changes to the program were suggested and approved based on data collected from 2009 to 2013. These changes include:

- Continue laboratory analysis for constituents that were more variable (less consistent between laboratories), limited in data, or important for baseline monitoring program. These constituents include: dissolved organic carbon (DOC), total nitrogen (TN), orthophosphate (OPO<sub>4</sub>), total phosphorus (TP), total suspended solids (TSS), volatile suspended solids (VSS), and total chlorophyll-a (CHLOR-A).

- Discontinue analyses for constituents that were consistent between laboratories, were often non-detect, or were cost prohibitive. These constituents include: alkalinity, nitrite+nitrate, ammonia, and five-day carbonaceous biological oxygen demand (CBOD5).
- Add another sampling event between August and October for comprehensive look at the Klamath River. Instead of three sampling events, another sampling event was added in 2014. The four sampling events include: April, July, September, and October.
- Basic Laboratory was dropped from the cross comparison, reducing the laboratories to: CH2M Hill Applied Sciences Laboratory (Corvallis, Oregon) and Aquatic Research, Inc. (Seattle, WA).

Given these changes, laboratory cross comparison for 2014 included collecting a single surface grab sample in the Klamath River below Seiad Valley on April 16, July 9, September 10, and October 8. Each sample was split into two separate bottles via churn-splitter and sent to the two laboratories: CH2M Hill and Aquatic Research.

Even for an identical sample, laboratories may present different results due to the analytical equipment differences, experience of technicians, and varying methods. The cross comparison exercise is not intended to rate the performance of each laboratory or to determine which laboratory is “best.” Such an undertaking would require a much more comprehensive study. Rather, the comparisons are intended to illustrate the range of results produced by CH2M Hill and Aquatic Research for the identified constituents over a sampling season. This memo presents background information on the inter-laboratory study, overview of each laboratory’s methods, detection limits and reporting limits, cross comparison methods, summary of sampling issues, summary of results, and plots for each constituent.

## **Background**

The IM 15 laboratory comparison, which began in 2009, is now in its sixth year. To explore different water quality conditions as well as share the responsibilities in collecting the cross comparison samples, the IM 15 monitoring group decided to move sampling locations every two years among the four sampling entities. The sampling location for the cross comparison in 2009 and 2010 was Link Dam, near Klamath Falls (RM 254.4) by the United States Bureau of Reclamation. In 2011, three grab samples were collected at the Klamath River near the Estuary (RM 0.5) by the Yurok Tribe. Several constituents were below the detection level at this location. Therefore, the group decided to move the 2012 sampling site further upstream. In 2012, three grab samples were collected at the Klamath River near Weitchpec (RM 43.5) by the Yurok Tribe. In 2013, three grab samples were collected at the Klamath River below Seiad Valley (RM 128.5) by the Karuk Tribe. In 2014, four grab samples were collected at the Klamath

River below Seiad Valley (RM 128.5) by the Karuk Tribe. In 2015 and 2016 PacifiCorp will collect cross comparison samples at a location to be determined by the group.

Censored data samples refers to laboratory results with “less than” (<), “non-detect” (ND), and (j) flag data. Data sets with “less than” and “non-detect” are results below the method detection limit (MDL). When censored data is present for a constituent at two laboratories, then the pair is excluded from the cross comparisons. More information on this topic is discussed in the cross comparison methods section. The method detection limit (MDL) is explicitly defined in Standard Methods (APHA 2005) as “the constituent concentration that, when processed through the complete method, produces a signal with a 99 percent probability that it is different than the blank.” The RL is defined as the lowest constituent concentration in a sample that can be quantitatively determined with statistical rigor. Results greater than or equal to the laboratory MDL, but below the method reporting limit (RL)<sup>6</sup> are referred to as (j) flag data.

## Overview of Labs: Methods, Detection and Reporting Limits

All methods used by the analytical laboratories were either EPA methods or Standard Methods. While laboratories used the same methods for certain constituent analysis, the method detection limit (MDL) and reporting limit (RL) were not necessarily the same. The analytical methods and associated limits at each constituent at each laboratory are presented in Table D-1 and Table D-2.

Laboratory reporting values for constituents varied. Generally, the RL for each laboratory was within a factor of 5. For example, the RL for ammonia was 0.05 mg/l for CH2M Hill and 0.01 mg/l for Aquatic Research. For TSS and VSS, this maximum difference between the RL was a factor of 10. For several constituents, Aquatic Research did not provide a distinct RL, but set the RL as equal to the MDL.

**Table D-1. Laboratory methods, method detection limits (MDL), and reporting limits (RL) for CH2M Hill (2014). N/A = not applicable**

Constituent	units	Method	MDL	CH2M Hill	
				MDL	RL
DOC	mg/l	SM5310B	0.12		0.5
TN	mg/l	SM4500-N C	0.048		0.2
OPO4	mg/l	E365.1	0.0014		0.01
TP	mg/l	E365.4	0.017		0.05
TSS	mg/l	SM2540D	0.6		5
VSS	mg/l	E160.4	N/A		5
CHLOR-A <sup>a</sup>	0µg/l	EPA 445.0	0.18		N/A

<sup>a</sup> CH2M Hill does not analyze for chlorophyll-a. Samples were sent to Chesapeake Biological Laboratory (CBL) for chlorophyll-a analysis.

<sup>6</sup> Certain analytical laboratories are adopting more formal names for MDL, such as the Limit of Detection (LOD), and also for RL, such as the Level of Quantitation (LOQ) or Minimum Level of Quantitation (MLQ).

**Table D-2. Laboratory methods, method detection limits (MDL), and reporting limits (RL) for Aquatic Research (2014).**

Constituent	units	Method	MDL	Aquatic Research
				RL
DOC	mg/l	SM205310B	0.095	0.25
TN	mg/l	SM204500NC	0.03	0.05
OPO4 <sup>a</sup>	mg/l	SM18 4500PF	0.001	0.001
TP <sup>a</sup>	mg/l	SM18 4500PF	0.002	0.002
TSS	mg/l	SM20 2540D	0.1	0.5
VSS	mg/l	SM20 2540E	0.1	0.5
CHLOR-A <sup>a</sup>	µg/l	SM18 10200H	0.10	0.10

<sup>a</sup> The MDL and RL values were set to same concentration.

## Cross Comparison Method (RPD & AD)

To compare the results from each laboratory, relative percent difference (RPD) or absolute difference (AD) calculations were applied to paired samples for CH2M Hill and Aquatic Research. CH2M Hill and Aquatic Research reported different significant figures and the data presented herein are directly from respective laboratory reports. The RPD and AD, used for assessing a regular and duplicate sample are calculated as:

$$\text{RPD (percent)} = |(R - D)| / ((R + D) / 2) * 100 \quad (1)$$

$$\text{AD (concentration)} = |R - D| \quad (2)$$

Where:        R = Regular sample result  
                   D = Duplicate sample result

These RPD and AD formulae were adapted for the laboratory comparison as follows:

$$\text{RPD (percent)} = |(X1 - X2)| / ((X1 + X2) / 2) * 100 \quad (3)$$

$$\text{AD (concentration)} = |X1 - X2| \quad (4)$$

Where:        X1 = Result sample result from laboratory 1  
                   X2 = Result sample result from laboratory 2

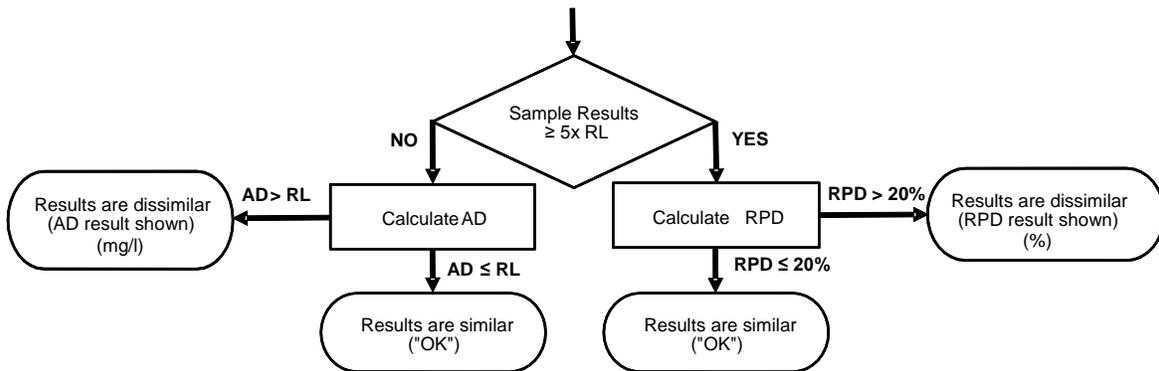

During each comparison, if the laboratories used different RLs, the larger RL value was selected as the criteria to determine whether to use the RPD or AD. Use of the larger RL value allows the comparison to encapsulate the largest possible uncertainty associated with the data.

If the sample result was equal to or greater than five times the selected reporting limit, the RPD was calculated. The RPD criteria of 20 percent was used to determine if two samples were similar (RPD of less than or equal to 20 percent) or dissimilar (RPD of greater than 20 percent) (USBR, 2009). If the RPD result was less than or equal to 20 percent, the two samples were deemed to be similar and the comparison was labeled with

an “OK” result. If the RPD result was greater than 20 percent, the results were termed dissimilar and the RPD was presented within the table.

If the sample result was less than five times the selected reporting limit, the AD was calculated and a different criteria of the reporting limit was used to determine if two samples were similar (AD less than or equal to the selected reporting limit) or dissimilar (AD greater than the selected reporting limit) (USB, 2009). If the AD was less than the selected reporting limit for the sample comparison, the comparison was labeled with an “OK” result. If the AD was greater than the selected reporting limit for the sample comparison, the results were termed dissimilar and the AD result was presented, along with a footnote of the laboratory reporting limit used. This process is illustrated in Figure D-1.

Censored data refers to sample results without a result (e.g. “<” value, non-detect, and (j) flagged). When censored data is present for a constituent, the sample pair is excluded from the cross comparison analysis. For example, a duplicate sample was sent to the laboratories to be analyzed for total phosphorus (TP). The results were 0.04(j) mg/l and 0.03(j) mg/l and CH2M Hill and Aquatic Research. Data below the laboratory RLs are replaced by the laboratory RLs in the data tables. Thus, both values at the two laboratories would be replaced by the RLs. Cross comparisons are not performed for paired data that consist of two RL values. These comparisons are labeled as “censored” and excluded from the cross comparison.

**Figure D-1. Flow diagram of the comparison process. RPD = relative percent difference. RL = reporting limit. AD = absolute difference.**

## 2014 Sampling

Sampling was scheduled for April 16, July 9, September 10, and October 8. Samples were collected, shipped, and processed by the laboratory for July 9 and October 8 sampling events. The April 16 sample sent to CH2MHill was lost due to a United Parcel Service (UPS) shipping error. To remedy this condition, the Karuk Tribe collected an additional interlab sample on August 6. On September 10 the interlab sample was not collected. The Karuk Tribe sent an email out on September 11, notifying several KHSA group members, and a new sample data of September 24 was selected.

The IM 15 baseline monitoring program, including the laboratory cross comparison element, is intended to be adaptive to accommodate challenges that face busy sampling crews, dynamic field conditions, shipping and laboratory issues, and other factors that can affect program results. The following recommendations are made to track samples and react to program problems in a timely manner:

- Shipping or tracking information should be maintained for all interlab samples
- Shipments should be confirmed with either a communication to the laboratory (email, phone call), or confirming via the shipping company website
- If a sampling date is missed, or a sample is lost in shipment, a communication (email, telephone call) to the group should be made as soon as feasible.
- The group, considering the number of remaining interlab samples and sampling dates can identify if there should be an additional sample collected and an appropriate date.

### **Chlorophyll-a**

In 2014, chlorophyll-a was collected and analyzed for all four sampling events. CH2M Hill does not analyze for chlorophyll-a. Therefore, the samples were sent to Chesapeake Biological Laboratory (CBL) in Maryland for analysis. The RPD was applied to CH2M Hill and Aquatic Research when both concentrations were equal to or greater than 5 times the reporting limits. Otherwise, the cross comparison were censored as “non-applicable”.

### **Results**

The comparison of the laboratory results from the two labs was completed as identified above (Figure D-1) based on laboratory data shown in Table D-3, Table D-5, Table D-7, and Table D-9. Data were not complete for the April 16 event and are not included. The cross comparison results for each sampling date are shown in Table D-4, Table D-6, Table D-8, and Table D-10.

**Table D-3. Laboratory data used for lab cross comparison: July 9, 2014.**

Constituent	Laboratory Units	CH2M Hill (CH2M)	Aquatic Research, Inc. (ARI)
Dissolved Organic Carbon (DOC)	mg/l	3.27	3.95
Total Nitrogen (TN)	mg/l	0.69	0.398
Orthophosphate (OPO4)	mg/l	0.098	0.116
Total Phosphorus (TP)	mg/l	0.11	0.131
Total Suspended Solids (TSS)	mg/l	4.2	2
Volatile Suspended Solids (VSS)	mg/l	0.4	1
Chlorophyll-a (CHLOR-A)	µg/l	0.58	0.1 <sup>a</sup>

<sup>a</sup> ARI result for CHLOR-A: "<0.1" mg/l. Value replaced with RL.

**Table D-4. Results for paired laboratory comparisons: July 9, 2014.**

Constituent	Units	CH2M Hill versus Aquatic Research, Inc.
Dissolved Organic Carbon (DOC)	mg/l	OK
Total Nitrogen (TN)	mg/l	(0.282 mg/l) <sup>a</sup>
Orthophosphate (OPO4)	mg/l	OK
Total Phosphorus (TP)	mg/l	OK
Total Suspended Solids (TSS)	mg/l	OK
Volatile Suspended Solids (VSS)	mg/l	OK
Chlorophyll-a (CHLOR-A)	µg/l	n/a

<sup>a</sup> CH2M RL result for TN: 0.2 mg/l.

**Table D-5. Laboratory data used for lab cross comparison: August 6, 2014.**

Constituent	Laboratory Units	CH2M Hill (CH2M)	Aquatic Research, Inc. (ARI)
Dissolved Organic Carbon (DOC)	mg/l	4.4	3.94
Total Nitrogen (TN)	mg/l	0.82	0.667
Orthophosphate (OPO4)	mg/l	0.15	0.182
Total Phosphorus (TP)	mg/l	0.22	0.232
Total Suspended Solids (TSS)	mg/l	11.6	8.5
Volatile Suspended Solids (VSS)	mg/l	5.4	5.5
Chlorophyll-a (CHLOR-A)	µg/l	19.34	15

**Table D-6. Results for paired laboratory comparisons: August 6, 2014.**

Constituent	Units	CH2M Hill versus Aquatic Research, Inc.
Dissolved Organic Carbon (DOC)	mg/l	OK
Total Nitrogen (TN)	mg/l	OK
Orthophosphate (OPO4)	mg/l	OK
Total Phosphorus (TP)	mg/l	OK
Total Suspended Solids (TSS)	mg/l	OK
Volatile Suspended Solids (VSS)	mg/l	OK
Chlorophyll-a (CHLOR-A)	µg/l	(25.3%) <sup>a</sup>

<sup>a</sup> CH2M and ARI value for CHLOR-A greater than 20 percent RPD.

**Table D-7. Laboratory data used for lab cross comparison: September 24, 2014.**

Constituent	Laboratory Units	CH2M Hill (CH2M)	Aquatic Research, Inc. (ARI)
Dissolved Organic Carbon (DOC)	mg/l	4.07	5.22
Total Nitrogen (TN)	mg/l	0.69	0.588
Orthophosphate (OPO4)	mg/l	0.13	0.15
Total Phosphorus (TP)	mg/l	0.18	0.199
Total Suspended Solids (TSS)	mg/l	6.2	7.5
Volatile Suspended Solids (VSS)	mg/l	4.6	2.8
Chlorophyll-a (CHLOR-A)	µg/l	3.81	2.9

**Table D-8. Results for paired laboratory comparisons: September 24, 2014.**

Constituent	Units	CH2M Hill versus Aquatic Research, Inc.
Dissolved Organic Carbon (DOC)	mg/l	(24.8%) <sup>a</sup>
Total Nitrogen (TN)	mg/l	OK
Orthophosphate (OPO4)	mg/l	OK
Total Phosphorus (TP)	mg/l	OK
Total Suspended Solids (TSS)	mg/l	OK
Volatile Suspended Solids (VSS)	mg/l	OK
Chlorophyll-a (CHLOR-A)	µg/l	(27.1%) <sup>b</sup>

<sup>a</sup> CH2M and ARI value for DOC greater than 20 percent RPD.

<sup>b</sup> CH2M and ARI value for CHLOR-A greater than 20 percent RPD.

**Table D-9. Laboratory data used for lab cross comparison: October 8, 2014.**

Constituent	Laboratory Units	CH2M Hill (CH2M)	Aquatic Research, Inc. (ARI)
Dissolved Organic Carbon (DOC)	mg/l	3.66	4.82
Total Nitrogen (TN)	mg/l	0.78	0.587
Orthophosphate (OPO4)	mg/l	0.12	0.136
Total Phosphorus (TP)	mg/l	0.14	0.163
Total Suspended Solids (TSS)	mg/l	7.4	6.7
Volatile Suspended Solids (VSS)	mg/l	1.6	2.3
Chlorophyll-a (CHLOR-A)	µg/l	3.3	2.1

**Table D-10. Results for paired laboratory comparisons: October 8, 2014.**

Constituent	Units	CH2M Hill versus Aquatic Research, Inc.
Dissolved Organic Carbon (DOC)	mg/l	(27.4%) <sup>a</sup>
Total Nitrogen (TN)	mg/l	OK
Orthophosphate (OPO4)	mg/l	OK
Total Phosphorus (TP)	mg/l	OK
Total Suspended Solids (TSS)	mg/l	OK
Volatile Suspended Solids (VSS)	mg/l	OK
Chlorophyll-a (CHLOR-A)	µg/l	(44.4%) <sup>b</sup>

<sup>a</sup> CH2M and ARI value for DOC greater than 20 percent RPD.

<sup>b</sup> CH2M and ARI value for CHLOR-A greater than 20 percent RPD.

## Summary

The 2014 interlab cross comparison, samples were collected in the Klamath River below Seiad Valley (RM 128.5). Comparisons were completed for dissolved organic carbon (DOC), total nitrogen (TN), orthophosphate (OPO4), total phosphorus (TP), total suspended solids (TSS), volatile suspended solids (VSS), and chlorophyll-a (CHLOR-A). 28 laboratory cross comparisons were considered.

In 2014, the study included: 21 similar pairs, 6 dissimilar pairs, 1 non-applicable pair, and no censored pairs. The 6 dissimilar pairs include: (2) DOC, (1) TN and (3) CHLOR-A (Table D-11). The comparisons of non-paired samples were labeled as non-applicable because the pair is not a similar, dissimilar, or censored paired.

**Table D-11. Summary of cross comparisons for each constituent. Comparisons include: 71 similar pairs, 14 dissimilar pairs, 17 censored pairs, 6 non-applicable pairs.**

	Similar Pairs	Dissimilar Pairs	Censored Pairs	Non-applicable*
DOC	2	2	-	-
TN	3	1	-	-
OPO4	4	-	-	-
TP	4	-	-	-
TSS	4	-	-	-
VSS	4	-	-	-
Chlorophyll-a	<u>0</u>	<u>3</u>	-	<u>1</u>
Total	<b>21</b>	<b>6</b>	<b>0</b>	<b>1</b>

\*Data for sample pair not available (e.g. no lab data).

Based on suggestions from the water quality monitoring group, comparison pairs for each constituent are plotted. Trend lines and linear regression equations are included in the graphs which are presented in Appendix A (Figure A-1 through Figure A-7) for the 2014 sampling season.

## Acknowledgement

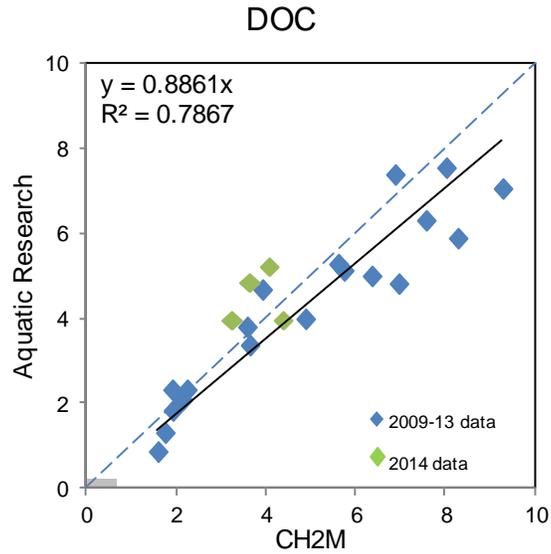

We would like to thank everyone who provided insight and feedback during the project meetings and comments for this technical memorandum.
