

PACIFICORP CONSERVATION POTENTIAL ASSESSMENT FOR 2019-2038

Volume 4: Class 2 DSM Analysis Appendix I

June 30, 2019

Report prepared for:
PACIFICORP

Energy Solutions. Delivered.

This work was performed by

Applied Energy Group, Inc. (AEG)
500 Ygnacio Valley Rd, Suite 250
Walnut Creek, CA 94596

Project Director: I. Rohmund

Project Manager: K. Kolnowski

Project Team: K. Marrin D. Burdjalov
K. Walter C. Arzbaeher
F. Nguyen
B. Bushong

CLASS 2 MEASURE DATA AND ASSUMPTIONS

Appendix I is a comprehensive list of the measures considered for the Class 2 potential analysis. For each measure, the following information is provided:

- **Segment:** Relevant market segment, building type, or facility type. Relevant options are listed in Appendix A.
- **End Use:** Category of end-use equipment to which measure savings apply. Relevant options are listed in Appendix A.
- **Measure Name:** Technical description of the measure, including measure efficiency.
- **Unit Description:** Units for savings and incremental costs.
- **Construction Vintage:** New or existing construction.
- **Average Savings per Unit (Annual kWh @meter):** First-year kWh savings at the customer meter.
- **Measure Life:** Expected life of measure in years.
- **Average Incremental Cost Per Unit:** Includes incremental equipment, labor, and present value O&M costs.
- **Base Year Saturation:** Percentage of units (homes, building, equipment, etc.) that have already installed or received the measure.
- **Applicability:** Percentage of units (homes, buildings, equipment, etc.) that can receive the measure. Accounts for technical limitations of installing the measure. The available market is Applicability minus Base Year Saturation.
- **Levelized Cost:** Cost (\$) per kWh saved at the generator or system level. This value is given in terms of the total resource cost (TRC) for all states except for Utah, where it is given in terms of the utility cost (UCT) per regulatory preferences.
- **Cumulative Achievable Technical Potential in 2038:** Represents cumulative annual energy savings in 2038 at the generator or system level. This value accounts for the impact of standards, in years after standards go into effect and is consistent with totals presented in Volume 2.
- **20-Year Incremental Achievable Technical Potential:** Represents the sum of 20-year incremental savings at the generator or system level. This value is consistent with what PacifiCorp used for IRP modeling.

Residential Measures

California Residential Measures Assumptions

Table I-1 Summary of Residential Measure Assumptions in California

Segment	End Use	Measure Name	Unit Definition	Construct. Vintage	Average Savings per Unit (Annual kWh @meter)	Measure Life (Years)	Average Incremental Cost (\$/Unit)	Base Year Saturation	Applicability	Levelized Cost (\$/kWh 2019-2038)	Cumulative Achievable Tech.
