

# PacifiCorp - Stakeholder Feedback Form

## Integrated Resource Plan

PacifiCorp (the Company) requests that stakeholders provide feedback to the Company upon the conclusion of each public input meeting and/or stakeholder conference call, as scheduled. PacifiCorp values the input of its active and engaged stakeholder group, and stakeholder feedback is critical to the IRP public input process. PacifiCorp requests that stakeholders provide comments using this form, which will allow the Company to more easily review and summarize comments by topic and to readily identify specific recommendations, if any, being provided. Information collected will be used to better inform issues included in the IRP, including, but not limited to the process, assumptions, and analysis. In order to maintain open communication and provide the broader Stakeholder community with useful information, the Company will post appropriate feedback on the IRP website based on your selection below.

Date of Submittal 2024-08-13

\*Name: Jane Myers Title: \_\_\_\_\_  
\*E-mail: myersjane2004@yahoo.com Phone: (801) 081 - 4315  
\*Organization: rate payer  
Address: 5317 W Wheatridge Ln  
City: West Jordan State: UT Zip: 84081  
Public Meeting Date comments address: 08-14-2024  Check here if related to specific meeting  
List additional organization attendees at cited meeting: \_\_\_\_\_

**\*IRP Topic(s) and/or Agenda Items:** List the specific topics that are being addressed in your comments.  
I am addressing the 30% rate increase that is "serving and benefiting Utah customers."

Check here if you want your Stakeholder feedback and accompanying materials posted to the IRP website.

**\*Respondent Comment:** Please provide your feedback for each IRP topic listed above.  
After returning from Scandinavia, I am shocked that we are still stressing coal in our energy policies. Even though Norway has found oil, they have 88% hydro power and are using more wind and solar. The coal is more expensive and dirtier for our unhealthy air quality in Utah than even natural gas (which is also readily available).

**Data Support:** If applicable, provide any documents, hyper-links, etc. in support of comments. (i.e. gas forecast is too high - this forecast from EIA is more appropriate). If electronic attachments are provided with your comments, please list those attachment names here.  
<https://energifaktanorge.no/en/norsk-energiforsyning/kraftproduksjon/>

**Recommendations:** Provide any additional recommendations if not included above - specificity is greatly appreciated.  
We have roof-top solar. The transmission lines are already in existence. Batteries can be added. We should not be pursuing coal in our future plans and we should be putting in many more transmission lines for the energy needs five years from now. We should be putting in more wind production. Our air quality is steadily getting worse, which effects climate change and global warming.

PacifiCorp Response (8/29/2024):

Thank you for your feedback. PacifiCorp uses the Integrated Resource Planning process to select the least-cost, least-risk portfolio given prevailing conditions at the time of planning. Renewable energy is a critical component of PacifiCorp's resource mixture and will make up an increasing proportion of the energy generated by the PacifiCorp system over time. Pages 6-7 of the 2023 IRP Update report that the preferred portfolio includes 3,749 megawatts of new solar online by 2037, 9,800 megawatts of new wind resources online by 2037, and more than 4,000 megawatts of new storage capacity online by 2037. PacifiCorp welcomes specific suggestions to enhance cost and other input assumptions for all types of resources. These assumptions are critical inputs that drive Plexos model selections. While renewable energy plays an

\* Required fields

ever-growing role in PacifiCorp's resource mixture, PacifiCorp's diverse portfolio of resources help to ensure system reliability during critical hours. In the 2023 IRP Update, thermal resources operated at a low-capacity factor in future years but were critical in ensuring system reliability during peak load hours. PacifiCorp is committed to achieving emissions reduction targets as required by state and federal regulatory obligations and welcomes the development of alternative fuel sources that can provide a similar level of system flexibility as traditional thermal resources at reduced emissions rates.
