PROGRAM ADMINISTRATION

WYOMING

Wattsmart Batteries

The **Rocky Mountain Power Wattsmart Battery Program** connects customers with a sustainable energy grid by utilizing renewable energy stored in customer-owned battery systems. These batteries help manage energy on the electric grid and can serve as a backup for homes or businesses. Participants earn an upfront enrollment incentive and ongoing bill credits, contributing to lower electricity prices.

Program Details:

- **Eligibility**: Open to Rocky Mountain Power customers who purchase and install a qualifying battery. Customers must work with their contractor to ensure all equipment meets program requirements. Qualifying batteries are listed at RockyMountainPower.net/battery.
- **Program Duration**: Four years, during which participants allow Rocky Mountain Power to use the energy stored in their solar batteries in exchange for an upfront incentive and ongoing bill credits.
- **Incentives**:
    - **Upfront Incentive**: Based on battery output ($400/per kW). Eligible participants receive an upfront enrollment incentive capped at $2,000 per household.
    - **Annual Participation Incentive**: $15 per kW. After their 4-year commitment to the program, the annual participation incentive increases to $50 per kW based on their energy usage only.
    -
- **Eligible Batteries**: Currently, Sonnen, SolarEdge, Fortress, Franklin, Tesla Powerwall 3, and Torus batteries qualify for the program.

This program is ideal for early adopters of technology, energy-conscious individuals, and those looking to positively impact the environment and renewable energy. Participants are responsible for maintaining their batteries for program use.[1]
