## **DATA REQUEST**

The following questions relate to PacifiCorp's Elevated Fire Risk (EFR) settings.

### **Question 1**

Please provide a description of PacifiCorp's review process for EFR settings after an EFR outage. Please include at the minimum:

- (1) How long after an EFR outage the review takes place; and
- (2) Whether PacifiCorp checks if customer load caused the EFR settings to trip.

### **Question 2**

For PacifiCorp's substation circuit breakers that operate at primary distribution voltages (less than 35 kV nominal) in California, please provide:

- a) The number of circuit breakers that have only electromechanical relays; and
- b) The percentage of circuit breakers that have only electromechanical relays.

### **Question 3**

PacifiCorp's response to data request CalAdvocates-PacifiCorp-2025WMP-01 states that PacifiCorp ensures a minimum factor for EFR line-current thresholds of 2x of historical load in response to question 1, but states that this factor is 1.2x in its *Distribution Relay Setting Guide* at 9 as of August 17, 2023.

Please state which factor (2x, 1.2x or other) between historical load and EFR line-current trip threshold PacifiCorp uses.
