REQUEST

Q01. Regarding PC-23-15 and PacifiCorp's Response Time for Outages in its Enhanced Fire Risk (EFR) Outage Summary Spreadsheet:

- a. In its response to Energy Safety's data request 02,¹ PacifiCorp provided an updated EFR outage summary spreadsheet. Some of the outage response times are zero or values were not reported. Additionally, PacifiCorp explained that outage response time is determined by calculating the sum of three intervals: Interrupt to Dispatch, Dispatch to Arrive, and Arrive to Restore. Since the outage response time is the time interval from interruption to restoration, should the outage response time, at a minimum, equal the outage duration time?
 1. If yes, provide the correct outages response times for each outage.
 2. If no, explain why the outage response time, at a minimum, should not equal the outage duration time.
 3. Additionally, for response times that are zero, close to zero, and values not reported, explain how these values account for dispatch and arrival time intervals.
